

Electronic Multi-Measuring Instrument

MODEL

# ME96SSRB-MB

User's Manual: Detailed Edition

- Before use, you should read this user's manual carefully to properly operate this instrument.  
Be sure to forward the manual to the end user.

## Check your delivery

The following table shows a list of the instrument accessories.  
When unpacking your package, check all the contents.

| Contents                          | Quantity | Specification  |
|-----------------------------------|----------|--|
| User's Manual<br>(Digest version) | 1        | <br>A3 size |
| Attachment lug<br>(with a screw)  | 2        |             |

## Optional plug-in module

The following table shows a list of optional plug-in modules available for this product.  
Installing the optional plug-in module enables various input or output. If you need it, consult with your supplier.  
ME-4201-NS96, ME-0052-NS96, and ME-0040C-NS96, which are optional plug-in modules for ME96NSR and ME96NSR-MB, are not available for ME96SSRB-MB.

| Model type       | I/O specifications |                    |               |                |               |                  |
|------------------|--------------------|--------------------|---------------|----------------|---------------|------------------|

| Digital output     | No-voltage a-contact<br>Contact Capacity: 35 V DC, 0.2 A or less                                 | ME-0052-SS96                                   |

In this manual, the operation is also explained when the optional plug-in module is installed.

## Features

- The instrument measures load status by wiring the secondary sides of VT (Voltage Transformer) and CT (Current Transformer) in the power receiving and distribution system and displays various measured values.
- The instrument supports Active Energy Class 0.5S and harmonic measurement (1st to 19th).
- Active energy can be measured by dividing into three time periods such as peak, off-peak, and shoulder. (Periodic Active Energy)
- This instrument enables measurement of active energy/reactive energy/ apparent energy for any period (interval). (Rolling demand active power/Rolling demand reactive power/Rolling demand apparent power)
- The password protection prevents undesired setting change and measured data deletion.
- The transmission function (MODBUS RTU communication, CC-Link communication, or MODBUS TCP communication) transmits measured data to superior monitoring systems.
  - \*CC-Link communication is available when ME-0040C-SS96 (optional plug-in module) is installed.
  - \*MODBUS TCP communication is available when ME-0040C-SS96 (optional plug-in module) is installed.
- The logging function enables to back up measured values in a SD memory card even when a MODBUS RTU communication error occurs.
  - \*It is available when ME-0000BU-SS96 or ME-0000BU25-SS96 (optional plug-in module) is installed.
- This instrument itself can output key measuring elements such as current, voltage, active power, power factor, and active energy at the power receiving point by installing an optional plug-in module with analog output/pulse output function. It is ideal for remote monitoring.
  - \*It is available when ME-4210-SS96B (optional plug-in module) is installed
- The built-in logging function provides the logging of measured values, alarm logs, and system logs into this instrument.
- The standard complies with the requirements of CE marking, UL standards, KC mark, and FCC/IC.
- The support function for checking input wiring enables to determine the wiring condition in the test mode. When either a voltage input or current input are incorrectly wired, the incorrect wiring part is displayed on the screen and it also shows a current phase angle, a voltage phase angle, and each value of active power, voltage, and current.

## Safety Precautions

Before use, read these instructions carefully to properly operate the instrument.

Be sure to follow the precautions described here for personnel and product safety.

Keep this manual ready to hand and accessible for future use at all times.

Be sure to forward the manual to the end user.

If you consider using the instrument for a special purpose such as nuclear power plants, aerospace, medical care, or passenger vehicles, consult with our sales representative.

The instructional icon in the manual is described as follows.

The caution icon ( $\Delta$ ) on the main unit indicates that incorrect handling may cause hazardous conditions. Always follow the subsequent instructions ( $\Delta_{\text{CAUTION}}$ ) because they are important to personal safety. Failure to follow them may result in an electric shock, a fire, erroneous operation, or damage to the instrument. If the instrument is used in a manner not specified by the manufacturer, the protection provided by the instrument may be impaired.

The terminals of auxiliary power (MA, MB) and voltage input (P1, P2, P3, PN) have hazards of electric shock, explosion, or arc flash. Turn off the power supply of auxiliary power and input circuit and then handle the instrument.

### ■ Precautions on use environment and conditions

Do not use the instrument in the following places:

Failure to follow the instruction may cause a malfunction or reduced product life time.

- The ambient temperature exceeds the range  $-5^{\circ}\text{C}$  to  $+55^{\circ}\text{C}$ .
- The average daily temperature exceeds  $+35^{\circ}\text{C}$ .
- The relative humidity exceeds the range 0 to 85% RH, or condensing.
- The altitude exceeds 2000 m.
- Pollution Degree: more than 2 \*Note 1
- Exposed to much dust, corrosive gas, salty environment, or oil mist
- Transient over voltage: 4000 V \*Note 1
- Exposed to excessive vibration or impact
- Exposed to rain or water drops
- Exposed to direct sunlight
- Pieces of metal or inductive substances are scattered.
- Exposed to strong magnetic fields or large exogenous noise

Note1: For details about the Pollution Degree and the Transient over voltage category, refer to EN61010-1:2010.

Grit, dust, and small insects cause poor contact or a failure such as insulation decline that caused by deposition and moisture absorption. Furthermore, in the area where the air contains conductive dust, a failure such as a product malfunction or insulation deterioration occurs in a relatively short time. In this case, you must take measures against it such as putting the instrument in an enclosed board. In addition, if the temperature inside the board rises, the measures must be undertaken as well.

## Safety Precautions

### ■ Precautions on Installation and wiring

Be sure to read the instructions carefully before installation and wiring.

- A qualified electrician must install and wire the instrument for safety.
- Supply power to the instrument after completing its assembly work on a cabinet door.
- The instrument is to be mounted on the cabinet door. All connections must be kept inside the cabinet.
- The following table shows the specifications on the input/output terminal.

#### ■ Auxiliary power supply and measuring elements

|                        |           |  |   |
|------------------------|-----------|--|---|
| Auxiliary power supply |           | 100 V AC to 240 V AC ( $\pm 15\%$ ) 50 Hz to 60 Hz<br>100 V DC to 240 V DC (-30% +15%)   | MA, MB terminals                                    |
| Measuring element      | Voltage   | 3-phase 4-wire: max 277/480 V AC<br>3-phase 3-wire: (DELTA) max 220 V AC (STAR) max 440 V AC<br>1-phase 3-wire: max 220/440 V AC<br>1-phase 2-wire: (DELTA) max 220 V AC (STAR) max 440 V AC | Category III<br>P1, P2, P3, PN terminals            |
|                        | Current   | 5 A (CT secondary side), max 30 V AC   | Category III<br>+C1, C1, +C2, C2, +C3, C3 terminals |
|                        | Frequency | 50 Hz or 60 Hz   |   |

The current input terminals must be connected to a CT, external equipment, with basic insulation.

Be sure to continuously connect the terminals for voltage-measuring purpose and current-measuring purpose during operation.

#### ■ Others

|                          |  |             |
|--------------------------|--|-------------|
| MODBUS RTU communication | T/R+, T/R-, SG terminals   | max 35 V DC |
| MODBUS TCP communication | Ethernet terminal  |             |
| CC-Link communication    | DA, DB, DG terminals   |             |
| Digital input            | DI1, DI2, DI3, DI4, DI COM, DI+, DI-, DI1+, DI1-, DI2+, DI2-, DI3+, DI3-k, DI4+, DI4-, DI5+, DI5-terminals |             |
| Digital output           | DO1+, DO1-, DO2+, DO2- terminals   |             |
| Analog output            | CH1+, CH1-, CH2+, CH2-, CH3+, CH3-, CH4+, CH4-terminals  |             |
| Pulse/Alarm output       | C1A/A1, C1B/COM1, C2A/A2, C2B/COM2 terminals   |             |

- Keep the protection sheet affixed to the front of the instrument during installation and wiring.
- Do not drop the instrument from high place. If it is dropped and the display cracks, do not touch the liquid leaking from the broken LCD or do not get it in your mouth. If you touched the liquid, rinse it off with soapy water at once.
- Do not work under live-line condition. Otherwise, an instrument failure, an electric shock, or a fire may be caused.
- When tapping or wiring, take care not to enter any foreign objects such as chips or wire pieces into the instrument.
- If you pulled the wires with a strong force when connecting them to the terminals, the terminals might come off. (Tensile load: 39.2 N or less)
- Check the wiring diagram carefully. Inappropriate wiring can cause a failure of the instrument, an electric shock, or a fire.
- Use appropriate size wires. The use of an inappropriate size wire can cause a fire due to heat generation.
- Use crimp-type terminals compatible with the wire size. For details, refer to **7.3.1 Specifications on the Applicable Electrical Wire**. The use of an inappropriate terminal can cause a malfunction, failure, or burnout of the instrument or a fire due to damage to the terminal or poor contact.
- Tighten the terminal screws with a specified torque and use a suitable pressure connector. For details, refer to **7.3.1 Specifications on the Applicable Electrical Wire**. Excessive tightening can cause damage to the terminals and screws.
- Be sure to confirm the wiring connections strictly after the connection. Poor connection can cause a malfunction of the instrument, an electric shock, or a fire.

### ■ Precautions on preparation before use

- Observe the use conditions and environment requirements for installation place.
- You must set up the instrument before use. Read the manual carefully to set it up correctly. If the setup is incorrectly done, the instrument will not be properly operated.
- Check the power rating of the instrument and then apply proper voltage.

### ■ Precautions on how to use

- When operating the instrument, check that active bare wires do not exist around it. If any bare wire existed, stop the operation immediately and then take appropriate action such as insulation protection.
- If a power outage occurred during the setup, the instrument would not be set up correctly. Set it up again after power recovery.

|   |  |
|---|--|
|  | <ul style="list-style-type: none"> <li>● Do not disassemble or modify the instrument to use. Otherwise, a failure, an electric shock, or a fire can be caused.</li> <li>● Use the instrument within the rating specified in the manual. If you used it outside the rating, it might cause not only a malfunction or failure of the instrument but also ignition or burnout.</li> <li>● Do not open the CT secondary side while the primary current is energized. When the CT secondary side circuit is open, the primary current flows. However, the secondary current does not flow. Therefore, a high voltage is generated at the CT secondary side and the temperature rises, resulting in insulation breakdown in the CT secondary winding. It may lead to burnout.</li> <li>● When external equipment is connected to the external terminals, the instrument and external equipment must not be powered and be used after the definitive assembly on a cabinet door.</li> <li>● The rating of the terminal of external equipment should satisfy that of the external terminal of the instrument.</li> </ul> |
|---|--|

### ■ Precautions on maintenance

- Wipe dirt off the surface with a soft dry cloth.
- Do not leave a chemical cloth in contact with the instrument for a long time or do not wipe it with benzene, thinner, or alcohol.
- In order to properly use the instrument for a long time, conduct the following inspections:
  - (1) Daily maintenance
    - ① No damage in the instrument
    - ② No abnormality with LCD indicator
    - ③ No abnormal noise, smell or heat generation
  - (2) Periodical maintenance
 

Inspect the following item every six months to once a year.

    - ① No looseness of installation and terminal block connection

|   |  |
|---|--|
|  | <p>Be sure to conduct periodic inspection under the electric outage condition. Failure to follow the instruction may cause a failure of the instrument, an electric shock, or a fire. Tighten the terminals regularly to prevent a fire.</p> |
|---|--|

## Safety Precautions

### ■ Precautions on storage

To store the instrument, turn off the power supplies of auxiliary power and input circuit, remove the wires from the terminals, and then put them in a plastic bag.

For long-time storage, avoid the following places. Otherwise, there is danger of an instrument failure or reduced product life time.

- The ambient temperature exceeds the range  $-25^{\circ}\text{C}$  to  $+75^{\circ}\text{C}$ .
- The average daily temperature exceeds  $+35^{\circ}\text{C}$ .
- The relative humidity exceeds the range 0 to 85% RH, or condensing.
- Exposed to much dust, corrosive gas, salty environment, or oil mist.
- Exposed to excessive vibration or impact.
- Exposed to rain or water drops.
- Exposed to direct sunlight.
- Pieces of metal or inductive substances are scattered.

### ■ Warranty

- The warranty period is for one year from the date of your purchase or 18 months after the manufacturing date, whichever is earlier.
- During the warranty period, if any failure occurred in standard use that the product is used in the condition, method, and environment followed by the conditions and precautions described in the catalog and user's manual, we would repair the product without charge.
- Even within the warranty period, non-free repair is applied to the following cases.
  - ① Failures caused by the customer's improper storage, handling, carelessness, or fault.
  - ② Failures caused by faulty workmanship
  - ③ Failures due to faults in use or undue modification
  - ④ Failures due to force majeure such as a fire or abnormal voltage or due to natural disasters such as earthquakes, windstorms, or floods.
  - ⑤ Failures caused by the problem in question that could not be predicted with the technology available at the time the product was shipped.
- Our company shall not be liable to compensate for any loss arising from events not attributable to our company, customers' opportunity loss or lost earnings due to failure of the product, any loss, secondary loss, or accident caused by a special reason regardless of our company's predictability, damage to other products besides our products, or other operations

### ■ Replacement cycle of the product

It is recommend that you renew the product every ten years although it depends on your use condition. The long-term use of the product may cause discoloration of the LCD or a product malfunction.

### ■ Disposal

- Treat the product properly as industrial waste.
- ME-0000BU-SS96 or ME-0000BU25-SS96 (optional plug-in module) is equipped with a lithium battery. The lithium battery is disposed of according to the local regulation.
- In EU member states, there is a separate collection system for waste batteries. Dispose of batteries properly at the local community waste collection/recycling center.  
For ME-0000BU-SS96 or ME-0000BU25-SS96, the following symbol mark is printed on the packaging.

Note: This symbol is for EU member states only.

The symbol is specified in Article 20 'Information for end-users' of the new EU Battery Directive (2006/66/EC) and the Annex II.

The above symbol indicates that batteries need to be disposed of separately from other wastes.

ME-0000BU-SS96 or ME-0000BU25-SS96 (optional plug-in module) is equipped with a lithium battery. Therefore, if it is thrown in fire, heat generation, burst, or ignition may occur. The lithium battery is disposed of according to the local regulation.

### ■ Packaging materials and user's manual

For reduction of environment load, cardboard is used for packaging materials and the manual is printed with recycled papers.

## EMC Directive Instruction

This section summarizes the precautions to have the cabinet constructed with the instrument conform to the EMC Directive.

However, the method of conformance to the EMC Directive and the judgment on whether or not the cabinet conforms to the EMC Directive must be determined finally by the manufacturer.

This instrument complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This instrument may not cause harmful interference, and (2) this instrument must accept any interference received, including interference that may cause undesired operation.

### 1. EMC Standards

- EN 61326-1
- EN 61000-3-2
- EN 61000-3-3

### 2. Installation (EMC directive)

The instrument is to be mounted on the panel of a cabinet.

Therefore, the installation to the cabinet is important not only for safety but also for conformance to EMC.

The instrument is examined in the following conditions.

- A conductive cabinet must be used.
- The conductivity of the six surfaces of the cabinet must be all ensured.
- The cabinet must be grounded by thick wires for low impedance.
- The hole drilling dimensions on the cabinet must be 10 cm or less in diameter.
- The terminals for protective earth and functional earth must be grounded by thick wires for low impedance. The use of the terminal for protective earth is important not only for safety but also for conformance to EMC.
- The connecting part of the terminal must be all placed inside the cabinet.
- Wiring outside the cabinet must be conducted with shielded cables, and the cables must be fixed to the panel with clamps. (Strip the covering of shielded cable by a portion of clamp installation and then mask the grounding part of the panel and clamp so as not to be painted.)

## Precautions for KC mark

### 사용자안내문

| 기종별                | 사용자안내문  |
|--------------------|---|
| A급 기기(업무용 방송통신기자재) | 이 기기는 업무용(A급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다. |

#### ■ Precautionary note written in Korean

Distributors and users must understand that this product meets the electromagnetic compatibility requirements and is designed for industrial use (Class A).  
Do not use the product in a residential area.

#### ■ Applicant for KC mark : MITSUBISHI ELECTRIC AUTOMATION KOREA CO.,LTD

#### ■ Manufacturer : MITSUBISHI ELECTRIC CORPORATION

Note 1: This is the notification for the KC mark (Korea Certification)

## Table for measuring element code

The following table shows a list of measuring element codes used in the manual.

| Measuring element code | Measuring element name                  |
|------------------------|---|
| A1                     | Current, 1-phase                        |
| A2                     | Current, 2-phase                        |
| A3                     | Current, 3-phase                        |
| AN                     | Current, N-phase                        |
| A <sub>AVG</sub>       | Current, average                        |
| DA1                    | Current demand, 1-phase                 |
| DA2                    | Current demand, 2-phase                 |
| DA3                    | Current demand, 3-phase                 |
| DAN                    | Current demand, N-phase                 |
| DA <sub>AVG</sub>      | Current demand, average                 |
| V12                    | Voltage, between 1-2 lines              |
| V23                    | Voltage, between 2-3 lines              |
| V31                    | Voltage, between 3-1 lines              |
| V <sub>AVG</sub> (L-L) | Voltage, average, line to line          |
| V1N                    | Voltage, 1N-phase                       |
| V2N                    | Voltage, 2N-phase                       |
| V3N                    | Voltage, 3N-phase                       |
| V <sub>AVG</sub> (L-N) | Voltage, average, line to neutral       |
| W1                     | Active power, 1-phase                   |
| W2                     | Active power, 2-phase                   |
| W3                     | Active power, 3-phase                   |
| ΣW                     | Active power, total                     |
| var1                   | Reactive power, 1-phase                 |
| var2                   | Reactive power, 2-phase                 |
| var3                   | Reactive power, 3-phase                 |
| Σvar                   | Reactive power, total                   |
| VA1                    | Apparent power, 1-phase                 |
| VA2                    | Apparent power, 2-phase                 |

## 2. Each Mode Function

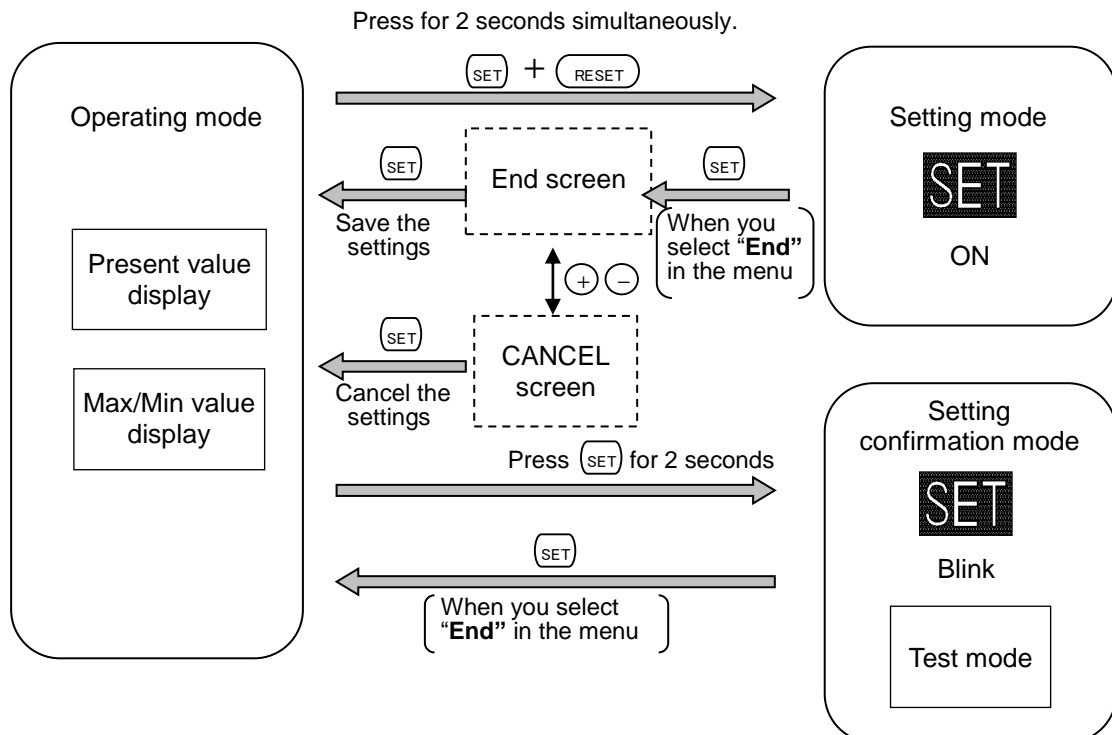

The instrument has the following operation modes.

When auxiliary power is supplied, the operating mode is first displayed.

Depending on the application, switch the operation mode to use.

| Mode                                  | Description  | Reference                             |
|---------------------------------------|--|---------------------------------------|
| Operating mode                        | This is a normal operation mode to display each measured value in digital numerical number. In the operating mode, there are 'Present value display' that shows values at present and 'Max/Min value display' that shows the maximum and minimum values in the past.<br>In addition, on each display screen, the cyclic display mode, which automatically switches the display screen every 5 seconds, is available.   | <b>5 Operation</b>                    |
| Setting mode                          | This is a mode where you can change the settings for measurement and output functions.<br>In addition, on the CANCEL screen, which is the screen to cancel the setting change, the following special operations are available. <ul style="list-style-type: none"> <li>Restart the instrument.</li> <li>Reset the settings to the factory default.</li> </ul>   | <b>3 How to Set up</b>                |
| Setting confirmation mode (Test mode) | This is a mode where you can confirm the setting of each item.<br>In this mode, you cannot change the setting. Therefore, it is possible to prevent from accidentally changing the setting.<br>The mode also provides test function available at startup of systems. <ul style="list-style-type: none"> <li>Communication Test: Without measurement (voltage/current) input, fixed numerical data is returned.</li> <li>Analog output adjustment: Analog output adjustment is executed such as zero adjustment or span adjustment.</li> <li>Output test: Without measurement (voltage/current) input, alarm/digital output, analog output, or pulse output is executed.</li> <li>Support function for checking input wiring:</li> <li>When either a voltage input or current input is incorrectly wired, the incorrect wiring part is displayed on the screen. In addition, useful information is also displayed such as a current phase angle and voltage phase angle.</li> </ul> | <b>3.15 or 4 How to Use Test Mode</b> |

### ■ Flow of each mode

### 3. How to Set up

#### 3.1. Setting Flow

For measurement, you must set settings such as phase wire system, VT/Direct voltage, and CT primary current in the setting mode.

From the operating mode, enter the setting mode and then set necessary items. Any items not set remain in the factory default.

For normal use, you can use the instrument by completing the settings in the setting menu 1 only. For details on the settings, refer to 3.2 Setting Menu 1: Basic Setup (Settings for Phase Wire System, Display Pattern, VT/Direct Voltage, and CT Primary Current).

For details on the factory default settings, refer to 8.7.

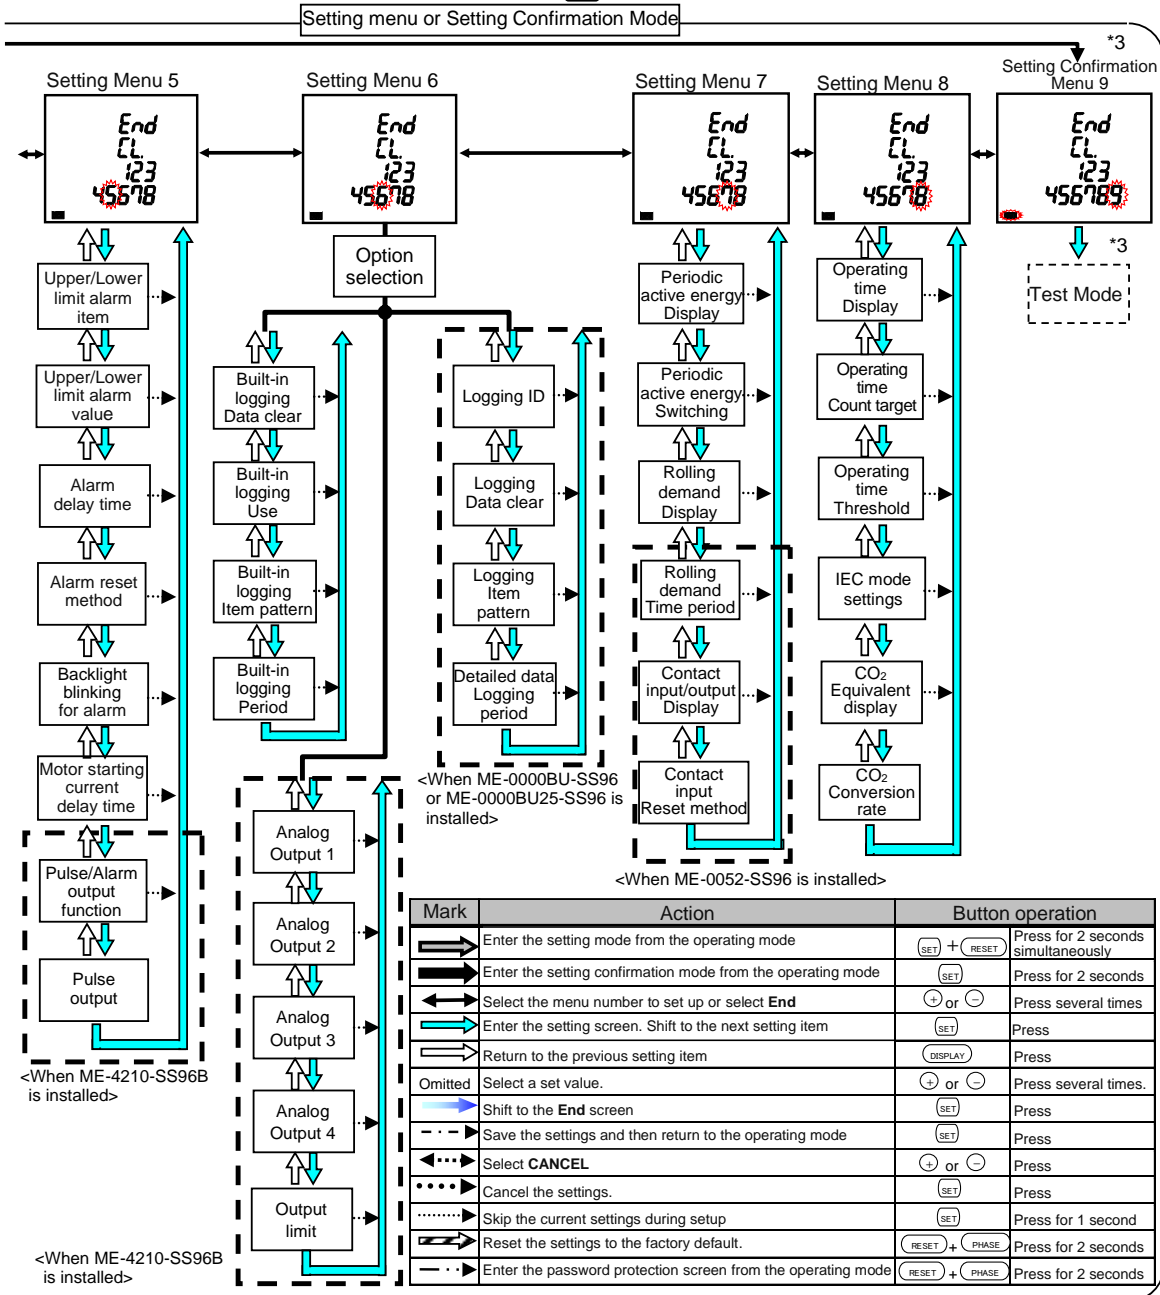

**CAUTION** When you change a setting, the related setting items and measured data will be initialized. Therefore, check that beforehand. For details on the initialization, refer to 3.16 Initialization of Related Items by Changing a Setting.

### 3. How to Set up

#### 3.1. Setting Flow

##### <Setting Procedure>

- ① Press the (SET) and (RESET) buttons simultaneously for 2 seconds to enter the setting mode.
- ② Select the setting menu number with the (+) or (-) button.
- ③ Press the (SET) button to determine the setting menu number.
- ④ Set each setting item. (Refer to 3.2 to 3.14.)
- ⑤ After completing all the settings, select **End** in the setting menu and then press the (SET) button.
- ⑥ When the **End** screen appears, press the (SET) button again.

#### ■ Basic operation for settings

The following table shows a list of basic operations for settings.

| Function                                | Operation                       | Note  |
|---|---------------------------------|---|
| Select a setting                        | Press (+) or (-) button         | Fast-forward by pressing for 1 second or more                                 |
| Determine a setting                     | Press (SET) button              | When the setting is determined, the screen switches to the next setting item. |
| Return to the previous setting item     | Press (DISPLAY) button          | The setting before return is enabled.   |
| Return to the setting menu during setup | Press (SET) button for 1 second |   |

### 3. How to Set up

#### 3.2. Setting Menu 1: Basic Setup (Settings for Phase Wire System, Display Pattern, VT/Direct Voltage, and CT Primary Current)

You will set the phase wire system, display pattern, VT/Direct voltage, CT primary current, and demand time period.

In the operating mode, press **SET** and **RESET** simultaneously for 2 seconds or more to enter the following operation.

Setting Menu

↑

DISPLAY

↓

SET

Select 1 in the setting menu number.  
\*Refer to the right figure.

①Phase wire system

↑

DISPLAY

↓

SET

Set the phase wire system according to the measurement target circuit.

3P4: 3-phase 4-wire

3P3. 2CT: 3-phase 3-wire(2CT)

3P3. 3CT: 3-phase 3-wire(3CT)

1P3. 1N2: 1-phase 3-wire(1N2 display)

1P3. 1N3: 1-phase 3-wire(1N3 display)

1P2: 1-phase 2-wire

Note: The underlined shows the default setting. (The same as below)

②Display Pattern

↑

DISPLAY

↓

SET

Set the display pattern.

→ P01 ↔ P02 ↔ P00 ←

<When 1-phase 2-wire system is set at ①Phase wire system.>

P02 is not selectable.

The following table shows measuring elements displayed on each display pattern. The measuring elements displayed on P01 and P02 are the same. For P01, four elements are displayed in one screen. For P02, each phase is displayed in one screen. For details, refer to 6.1.

P00 is a special display pattern to freely set display items. For details on the settings, refer to 3.18.

○ : Displayable only by this setting  
 △ : Other additional settings are necessary to display.  
 □ : Select 'P00' and set up the display order and position.

1) When set to 3-phase 4-wire system

| Display Pattern | Current | N Phase Current | Demand Current | N Phase Demand Current | Voltage | Active Power | Power Factor | Reactive Power | Apparent Power | Frequency | Active Energy (Imported) | Active Energy (Exported) | Reactive Energy (Imported lag) | Apparent Energy | Additional Screen *Note  |                          |                           |                 |                        |                |                          |                |                             |                |                            |   |   |   |   |   |   |   |   |   |

Continued to the next page.

### 3. How to Set up

#### 3.2 Setting Menu 1: Basic Setup (Settings for Phase Wire System, Display Pattern, VT/Direct Voltage, and CT Primary Current)

Continued from the previous page.

(2) For measurement with VT

<Secondary voltage setting>

(a) When set to 3-phase 4-wire system (Phase voltage)

(b) When set to 3-phase 3-wire (2CT, 3CT) /1-phase 2-wire system (Line voltage)

<Primary voltage setting>

The factory default settings:

- For 3-phase 4-wire system ⇒ 200 V (Phase voltage)
- For 3-phase 3-wire/1-phase 2-wire system ⇒ 10000 V (Line voltage)

- From the upper digit, set the blinking digit with (+) or (-).
- By pressing (SET), move the setting item, blinking one, to a lower digit.
- By pressing (DISPLAY), move the setting item, blinking one, to an upper digit.
- The setting ranges from 60 V to 750000 V. The setting unit is V.  
\*If you set out of range, the error message (E05) will appear.  
If the error message appears, press (SET) and then review the setting to set it again.
- By pressing (SET) at the lowest digit, shift to the next setting item.

Set the settings for CT.

You will set the primary and secondary current of CT.

<Secondary current setting>

Note: CT is Current Transformer.

<Primary current setting>

The factory default setting: 5.0 A

- From the upper digit, set the blinking digit with (+) or (-).
- By pressing (SET), move the setting item, blinking one, to a lower digit.
- By pressing (DISPLAY), move the setting item, blinking one, to an upper digit.
- The setting ranges from 1.0 A to 30000.0 A. The setting unit is A.  
\*If you set out of range, the error message (E05) will appear.  
If the error message appears, press (SET) and then review the setting to set it again.
- By pressing (SET) at the lowest digit, shift to the next setting item.

④CT current

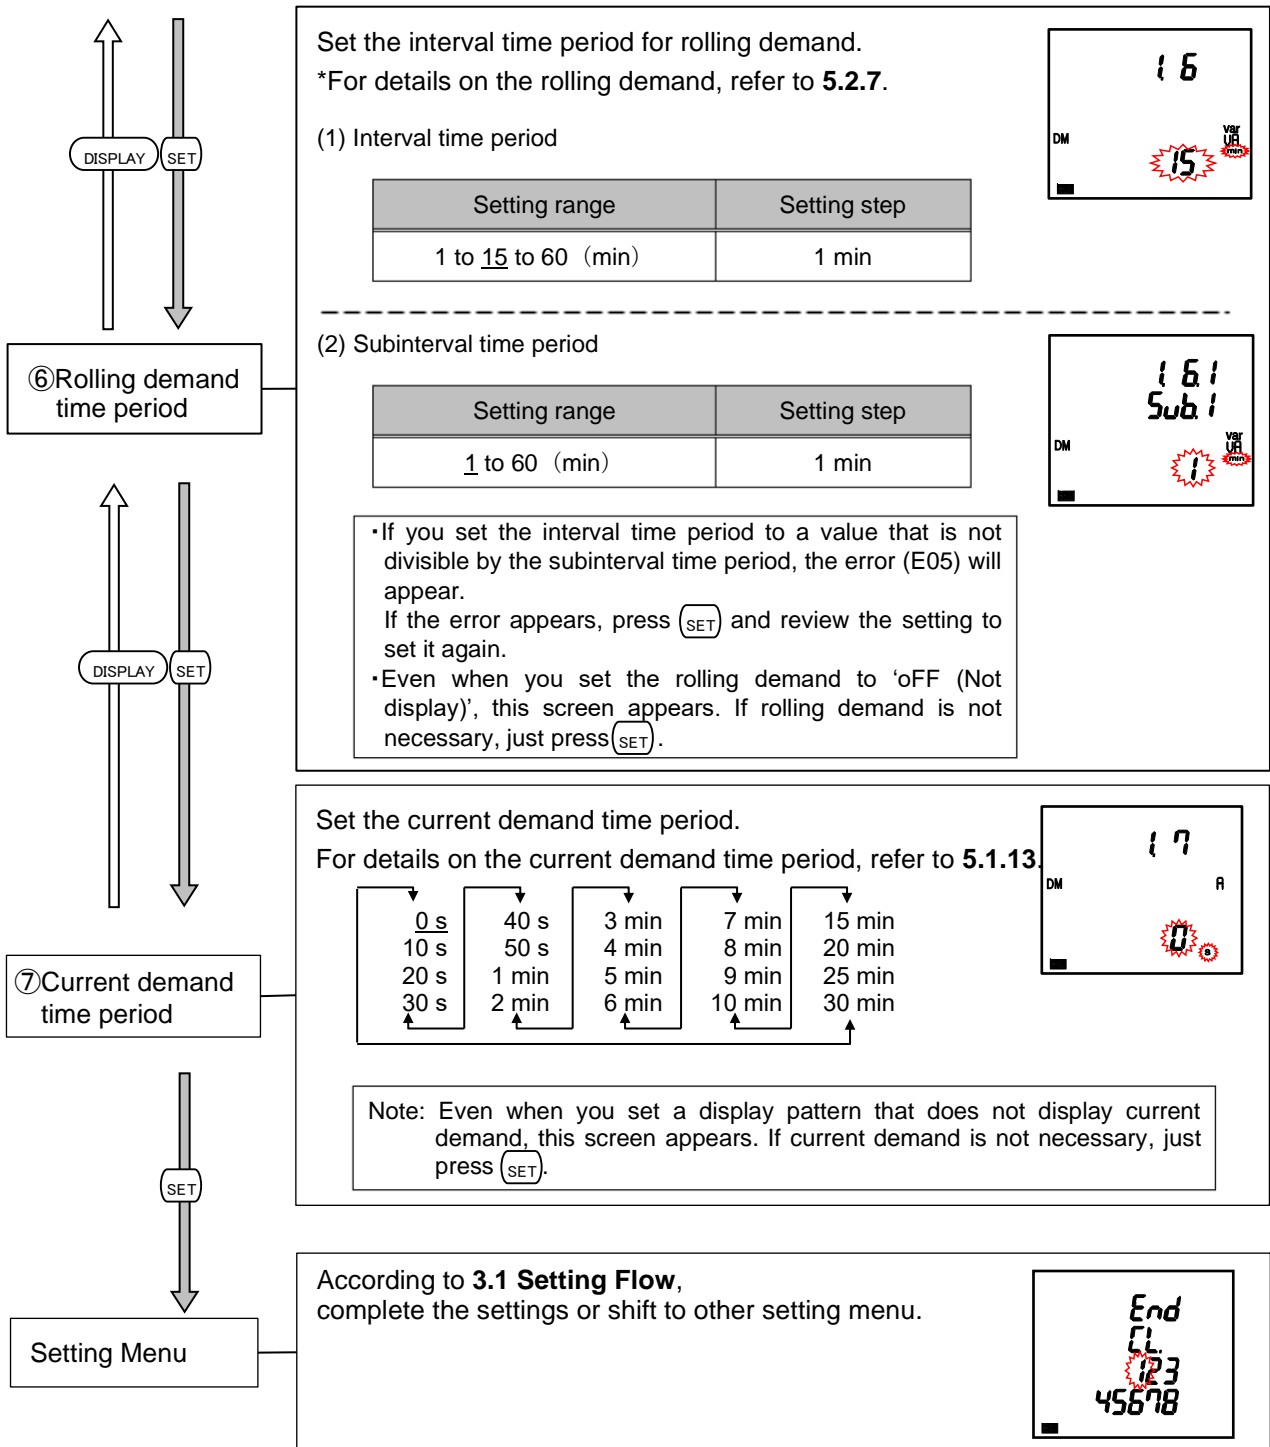

Set the frequency.

⑤Frequency

### 3. How to Set up

#### 3.2 Setting Menu 1: Basic Setup (Settings for Phase Wire System, Display Pattern, VT/Direct Voltage, and CT Primary Current)

If you set the settings only in the setting menu 1 to use, move to **5 Operation**.  
If you use an additional function, set it in the setting menu 2 to 8.

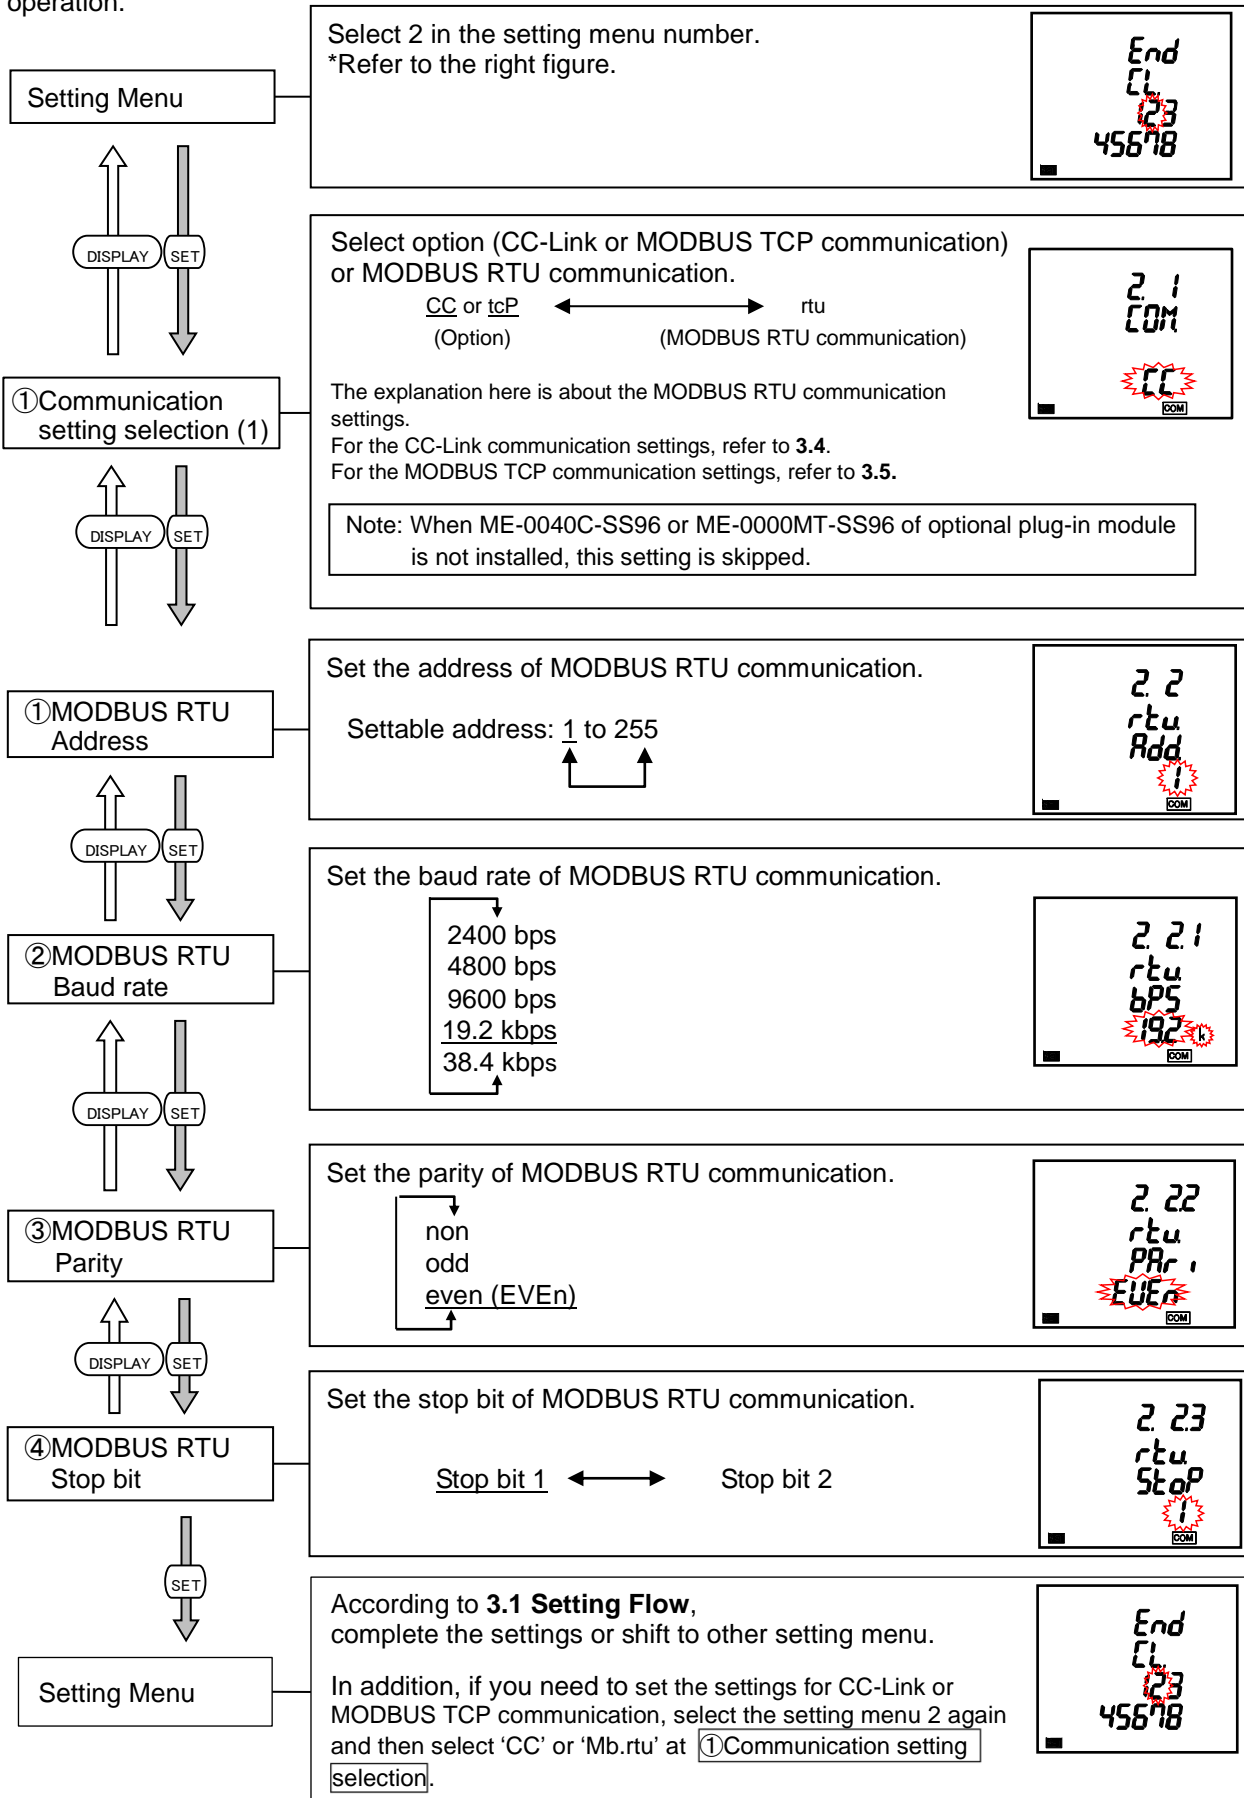

|             |   |
|-------------|---|
| <b>Note</b> | <p>If you change a setting in the setting menu 1, the maximum and minimum values of the related measuring elements will be reset. However, active/reactive/apparent energy value will not be reset.</p> <p>For details, refer to <b>3.16 Initialization of Related Items by Changing a Setting</b>.</p> |
|-------------|---|

### 3. How to Set up

#### 3.3. Setting Menu 2: Communication Settings (MODBUS RTU Communication Settings)

<The installation conditions for optional plug-in module>  
No installation

In the operating mode, press (SET) and (RESET) simultaneously for 2 seconds or more to enter the following operation.

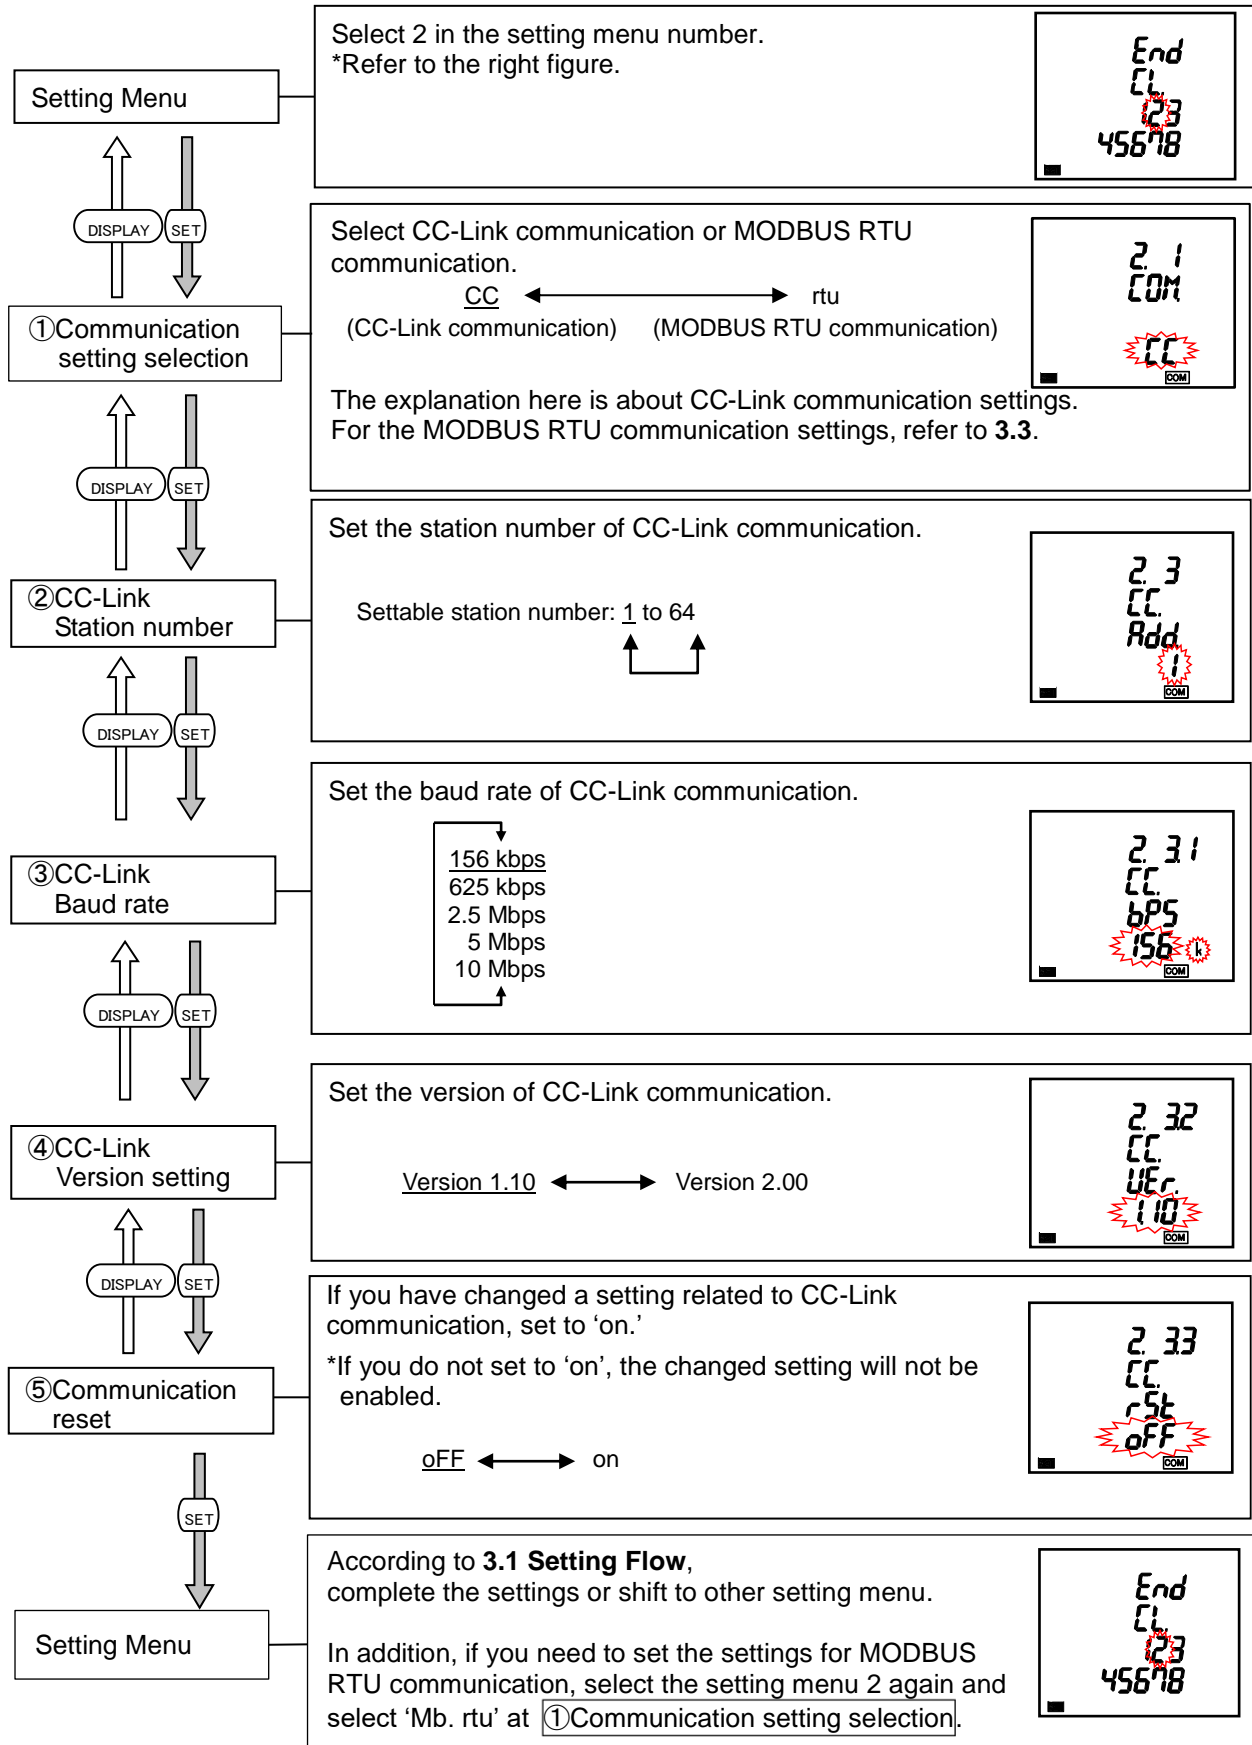

### 3. How to Set up

#### 3.4. Setting Menu 2: Communication Settings (CC-Link Communication Settings)

<The installation conditions for optional plug-in module>  
ME-0040C-SS96 installation

In the operating mode, press **(SET)** and **(RESET)** simultaneously for 2 seconds or more to enter the following operation.

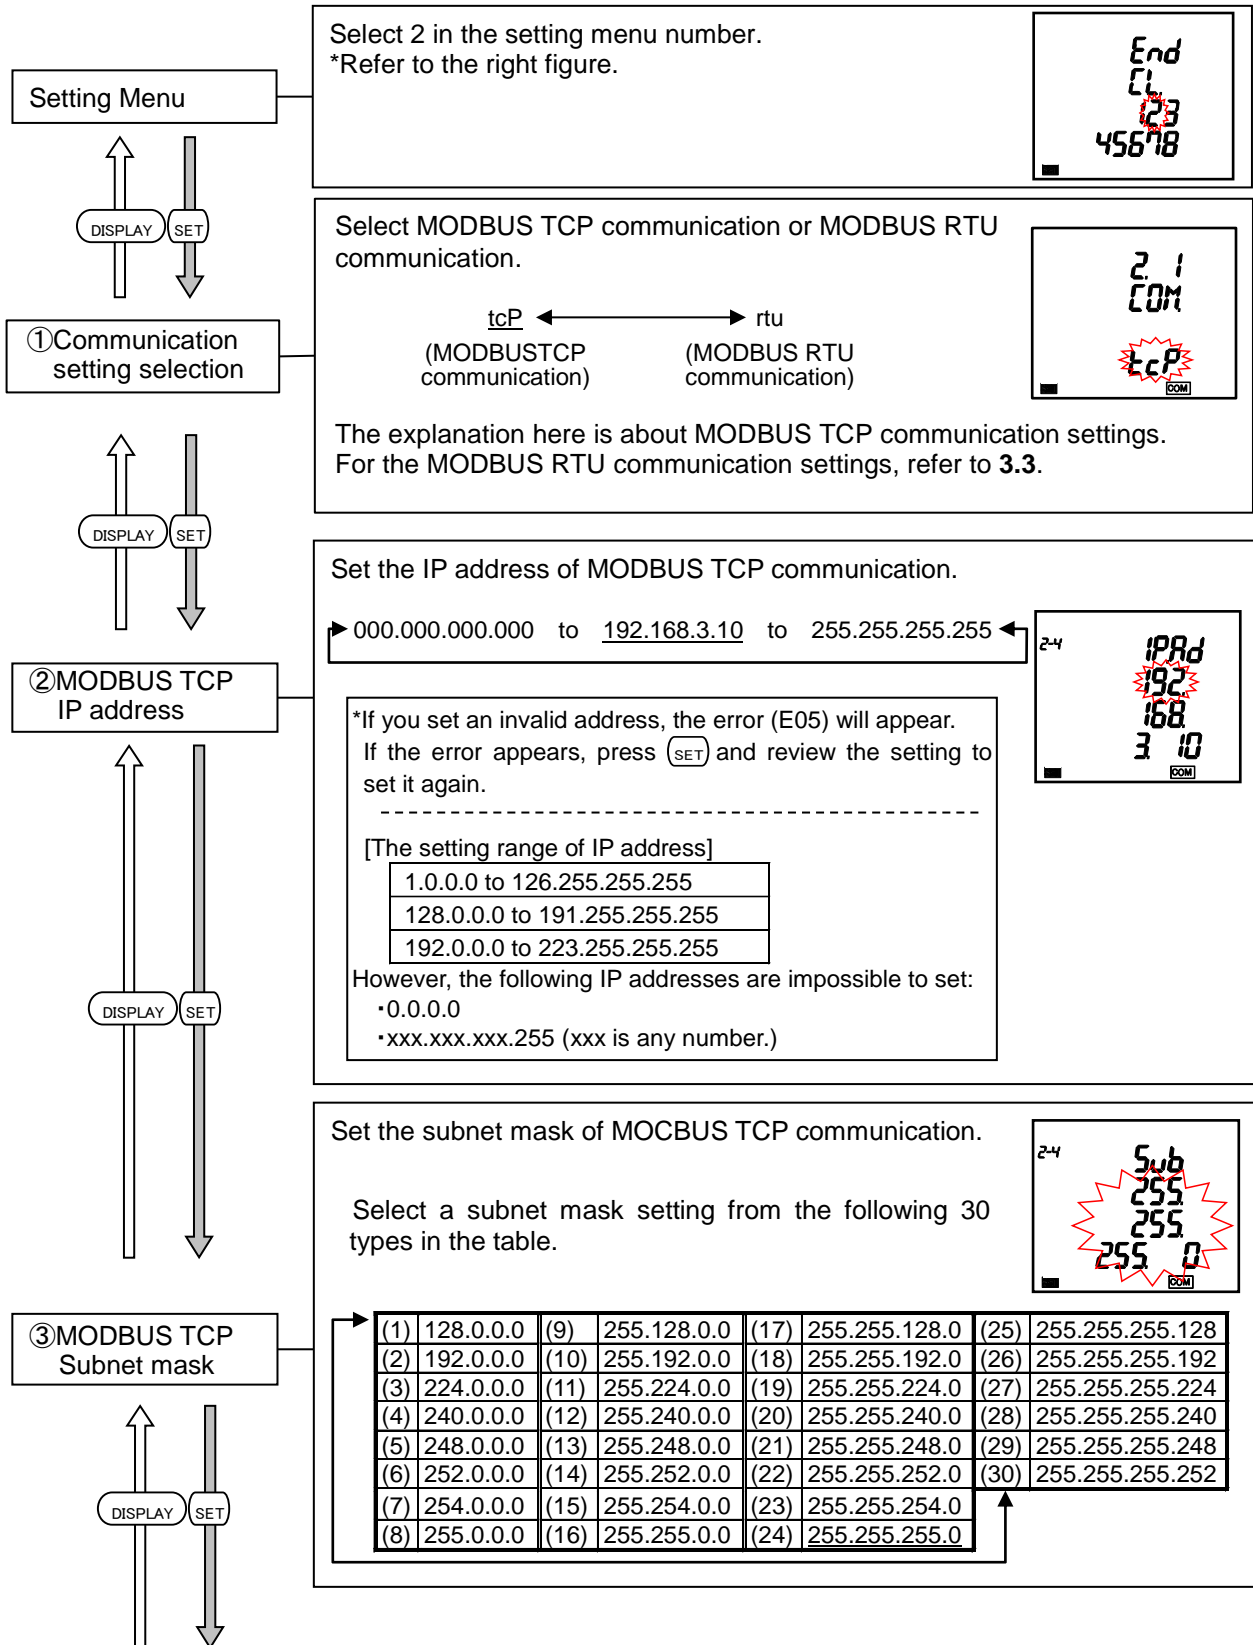

### 3. How to Set up

#### 3.5. Setting Menu 2: Communication Settings (MODBUS TCP Communication Settings)

<The installation conditions for optional plug-in module>  
ME-0000MT-SS96 installation

In the operating mode, press **(SET)** and **(RESET)** simultaneously for 2 seconds or more to enter the following operation.

### 3. How to Set up

#### 3.5. Setting Menu 2: Communication Settings (MODBUS TCP Communication Settings)

### 3. How to Set up

#### 3.6. Setting Menu 3: Display Settings (Settings for Active/Reactive Energy and Harmonic Measurement)

This section describes how to set the special measurement of active/reactive energy and harmonic display. In the operating mode, press **SET** and **RESET** simultaneously for 2 seconds or more to enter the following operation.

Setting Menu

DISPLAY

SET

② Harmonics display

↑

↓

Select 3 in the setting menu number.  
\*Refer to the right figure.

Set the display combination of active energy and reactive energy (imported/exported, lag/lead) and the measurement method of reactive energy.

| Combination (Setting) | Active energy (Wh) |          | Reactive energy (varh) |               |              |               | Reactive energy measurement method |
|-----------------------|--------------------|----------|------------------------|---------------|--------------|---------------|------------------------------------|
|                       | Imported           | Exported | Imported lag           | Imported lead | Exported lag | Exported lead |                                    |
| I                     | ○                  |          | ○                      |               |              |               | 2 quadrant measurement             |
| II                    | ○                  |          | ○                      | ○             |              |               |                                    |
| III                   | ○                  | ○        | ○                      |               | ○            |               | 4 quadrant measurement             |
| IV                    | ○                  | ○        | ○                      | ○             | ○            | ○             |                                    |

Note: For details on how to measure reactive energy, refer to 5.1.11.

Combination I, II ⇒ They are suitable for measuring systems without a private power generator or measuring reactive power of capacitor load where power factor is around zero generally.

Combination III, IV ⇒ They are suitable for measuring systems with a private power generator.

<Display examples>

Combination I

Combination II

Combination III

Combination IV

**in** Imported **out** Exported **← LEAD** varh (lead) **LAG →** varh (lag)

When 'Wh' or 'varh' is selected in the display pattern of P00, it is displayed.

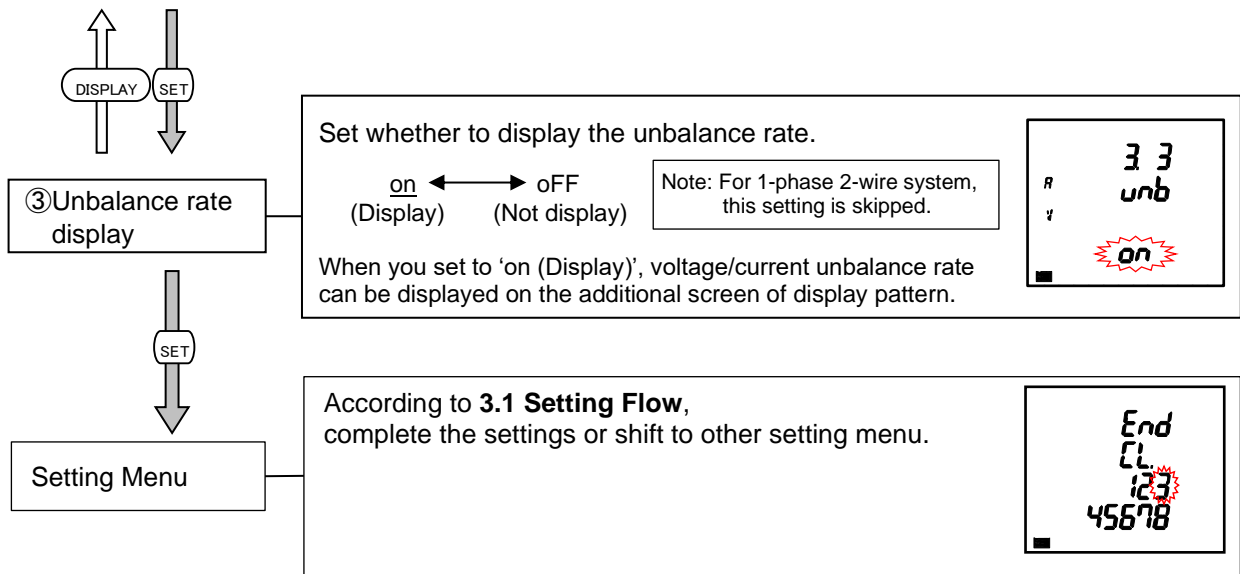

Set the harmonic display.

on ← → off  
 (Display) (Not display)

When you set to 'on (Display)', harmonic measured values are displayed on the additional screen of display pattern.

### 3. How to Set up

#### 3.6 Setting Menu 3: Display Settings (Settings for Active/Reactive Energy and Harmonic Measurement)

**Note** Even when you select a display pattern that does not display active/reactive power or active/reactive energy, the setting items of **⑥ Active/Reactive energy measurement** are displayed because the symbol can be displayed as appropriate for 2 quadrant/4 quadrant measurement of reactive power/power factor according to the settings of **⑥ Active/Reactive energy measurement**.

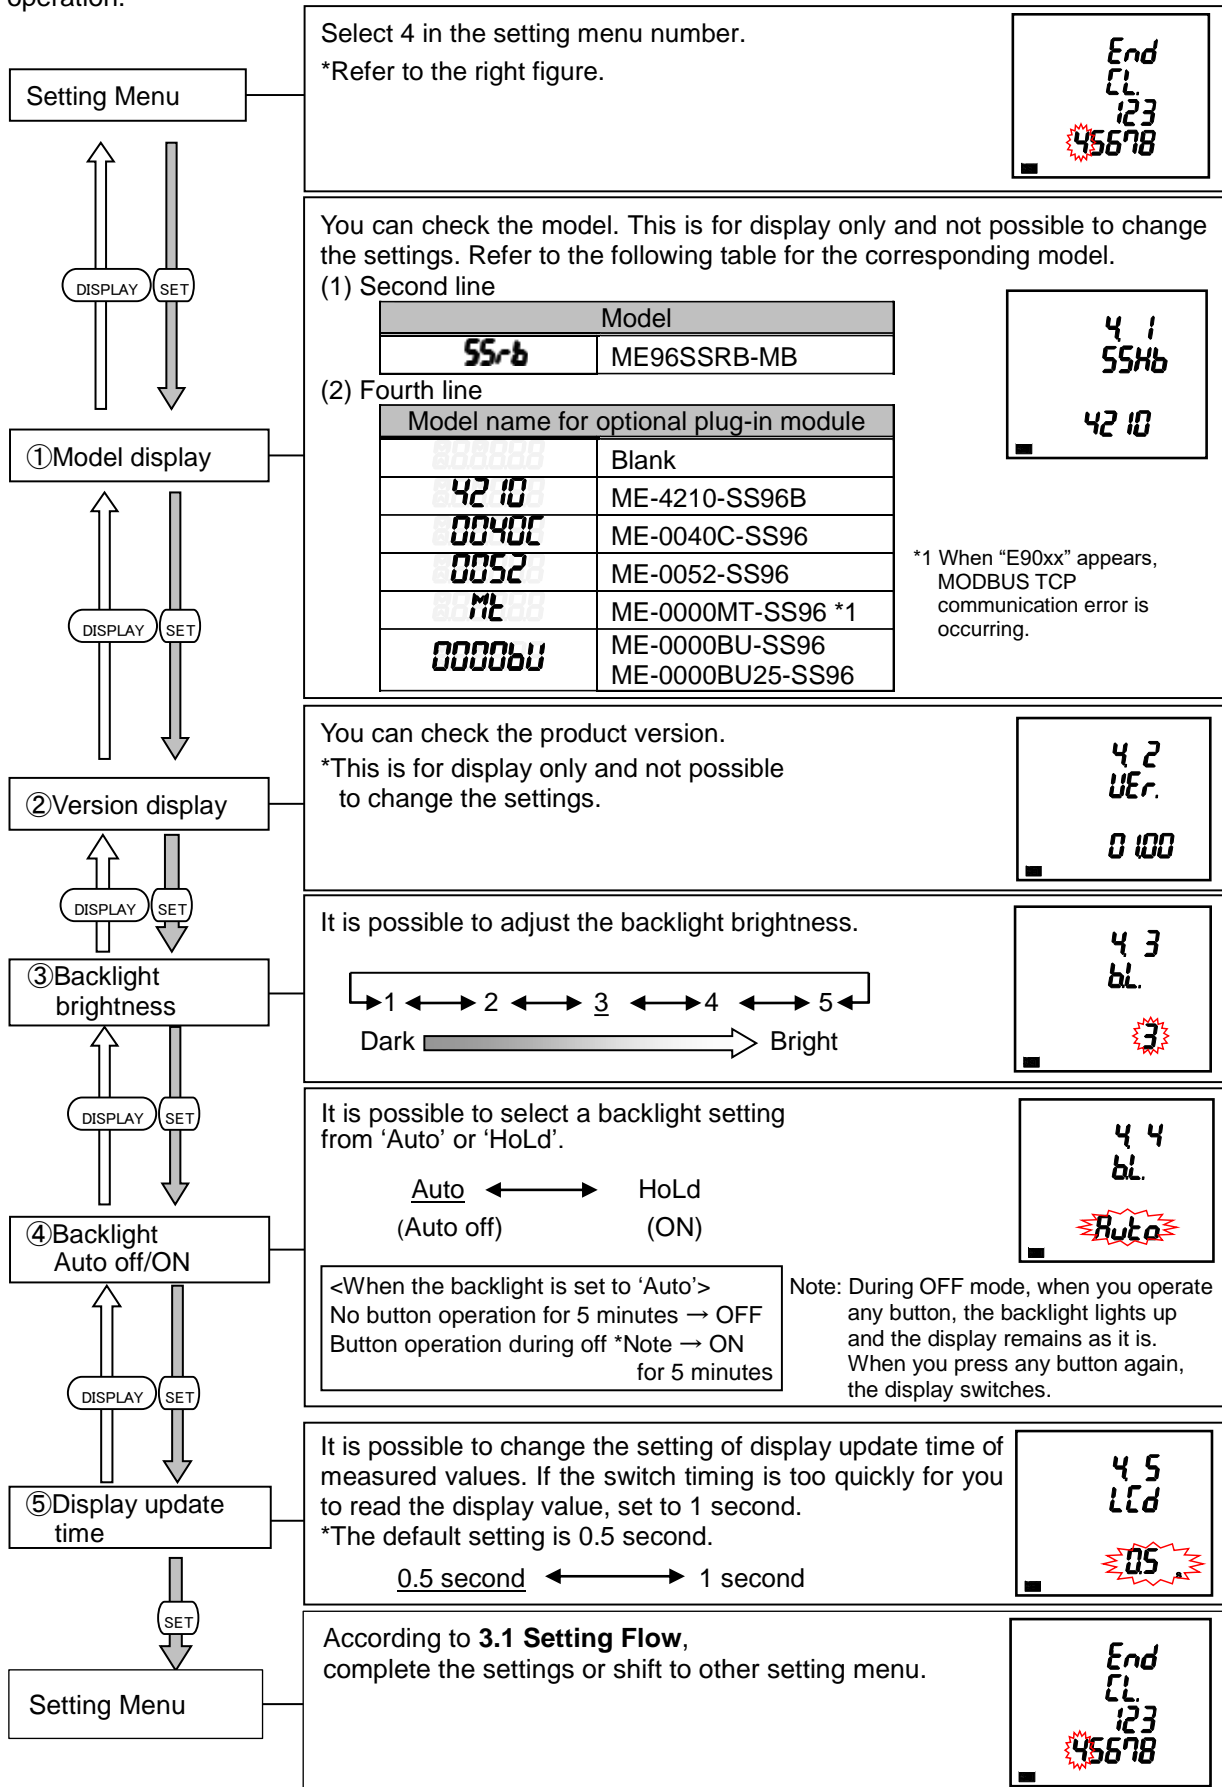

### 3. How to Set up

#### 3.7. Setting Menu 4: LCD Settings (Settings for Model Display, Version Display, Backlight, and Display Update Time)

This section describes how to check the model and set the backlight and display update time functions. These settings are not necessary for normal use.

In the operating mode, press (SET) and (RESET) simultaneously for 2 seconds or more to enter the following operation.

### 3. How to Set up

#### 3.8. Setting Menu 5: Pulse/Alarm Settings (Settings for Upper/Lower Limit Alarm, Motor Starting Current Mask Function, and Pulse Output)

This section describes how to set the upper/lower limit alarm, backlight blinking during alarm, motor starting current, pulse output, and alarm output.

In the operating mode, press **SET** and **RESET** simultaneously for 2 seconds or more to enter the following operation.

For details about each function, refer to the following:

- Upper/lower limit alarm → See 5.2.1 to 5.2.3.
- Motor starting current → See 5.2.17.

### 3. How to Set up

#### 3.8 Setting Menu 5: Pulse/Alarm Settings (Settings for Upper/Lower Limit Alarm, Motor Starting Current Mask Function, and Pulse Output)

Set the alarm value of upper/lower limit alarm item 1.

The following table shows the setting range.

| Measuring element                 | Setting range          | Setting Step * |
|-----------------------------------|------------------------|----------------|
| A, AN, DA, DAN upper limit        | 5 to 100 to 120 (%)    | 1%             |
| A, DA lower limit                 | 3 to 10 to 95 (%)      | 1%             |
| V (L-N), V (L-L) upper limit      | 25 to 110 to 135 (%)   | 1%             |
| V (L-N), V (L-L) lower limit      | 20 to 70 to 95 (%)     | 1%             |
| W, var upper limit                | -95 to 100 to 120 (%)  | 1%             |
| W, var lower limit                | -120 to 3 to 95 (%)    | 1%             |
| DW, Dvar, DVA upper limit         | 5 to 100 to 120 (%)    | 1%             |
| PF upper limit                    | -0.05 to 1 to 0.05     | 0.05           |
| PF lower limit                    | -0.05 to -0.5 to 0.05  | 0.05           |
| Hz upper limit                    | 45 to 65 (Hz)          | 1Hz            |
| Hz lower limit                    | 45 to 65 (Hz)          | 1Hz            |
| HI total upper limit              | 1 to 35 to 120 (%)     | 1%             |
| HI <sub>N</sub> total upper limit | 1 to 35 to 120 (%)     | 1%             |
| THD <sub>V</sub> upper limit      | 0.5 to 3.5 to 20.0 (%) | 0.5%           |
| Aunb upper limit                  | 1 to 30 to 99 (%)      | 1%             |
| Vunb upper limit                  | 1 to 3 to 99 (%)       | 1%             |

② Upper/Lower limit alarm value 1

\*Note: W, var, DW, Dvar, and DVA show the percentage ratio of a standard value. For details on how to calculate the standard value, refer to 6.2 Standard Value.

A, AN, DA, DAN, HI total RMS value, and HI<sub>N</sub> total RMS value show the percentage ratio of the CT primary current setting.

V shows the percentage ratio of the VT primary voltage (or direct voltage).

\*For 1-phase 3-wire system, V shows the percentage ratio of the phase voltage. For 12-phase or 31-phase, alarm monitoring is executed based on twice the set upper/lower limit alarm value.

③ Upper/Lower limit alarm item 2 to 4

Set a measuring element of each of upper/lower limit alarm item 2 to 4. The item you have already selected is not available repeatedly.

The setting method is the same as ① Upper/Lower limit alarm item 1.

④ Upper/Lower limit alarm value 2 to 4

Set the alarm value of each of upper/lower limit alarm item 2 to 4.

The setting method is the same as ② Upper/Lower limit alarm value 1.

⑤ Alarm delay time

Set the alarm delay time if you want to prevent an alarm caused by momentary overload or noise.

If you set this setting, an alarm will occur only when the upper/lower limit alarm value is exceeded and the situation continues for a period of alarm delay time.

|      |       |       |
|------|-------|-------|
| 0 s  | 30 s  | 2 min |
| 5 s  | 40 s  | 3 min |
| 10 s | 50 s  | 4 min |
| 20 s | 1 min | 5 min |

Note: When ① Upper/Lower limit alarm item 1 and ③ Upper/Lower limit alarm item 2 to 4 are all set to "non", this setting is skipped.

### 3. How to Set up

#### 3.8 Setting Menu 5: Pulse/Alarm Settings (Settings for Upper/Lower Limit Alarm, Motor Starting Current Mask Function, and Pulse Output)

⑥ Alarm reset method

DISPLAY

SET

⑦ Backlight blinking for alarm

DISPLAY

SET

⑧ Motor starting current delay time

DISPLAY

SET

Set the reset method to cancel an alarm.

| Reset method (Settings) | Description (For details, refer to 5.2.1 to 5.2.2.)   |
|-------------------------|---|
| Automatic (Auto)        | When alarm-generating conditions disappear, the alarm is automatically reset.   |
| Manual (HoLd)           | Even if alarm-generating conditions disappear, the alarm is retained. To cancel the alarm, you must execute button operation. |

Note: When ①Upper/Lower limit alarm item 1 and ③Upper/Lower limit alarm item 2 to 4 are all set to 'non', this setting is skipped.

It is possible to blink the backlight for alarm.

oFF ← → on  
(Not blink) (Blink)

Note: When ①Upper/Lower limit alarm item 1 and ③Upper/Lower limit alarm item 2 to 4 are all set to "non", this setting is skipped.

For motor current monitoring, this setting enables to prevent unnecessary maximum value update and alarm generating caused by motor starting current.

- When this setting is not necessary ⇒ Select 'oFF' and then press (SET) to move to the next setting item.
- When this setting is necessary ⇒ Select 'on' and then press (SET) to move to (1) below.

oFF ← → on

---

(1) Motor starting current threshold

Set the threshold to detect motor starting current.

| Setting range     | Setting step *Note |
|-------------------|--------------------|
| 3 to 5 to 120 (%) | 1%                 |

\*Note: This is the percentage ratio to the CT primary current setting.

(2) Motor starting current delay time

During the delay time after motor starting current is detected, neither a maximum value update nor an alarm is generated.

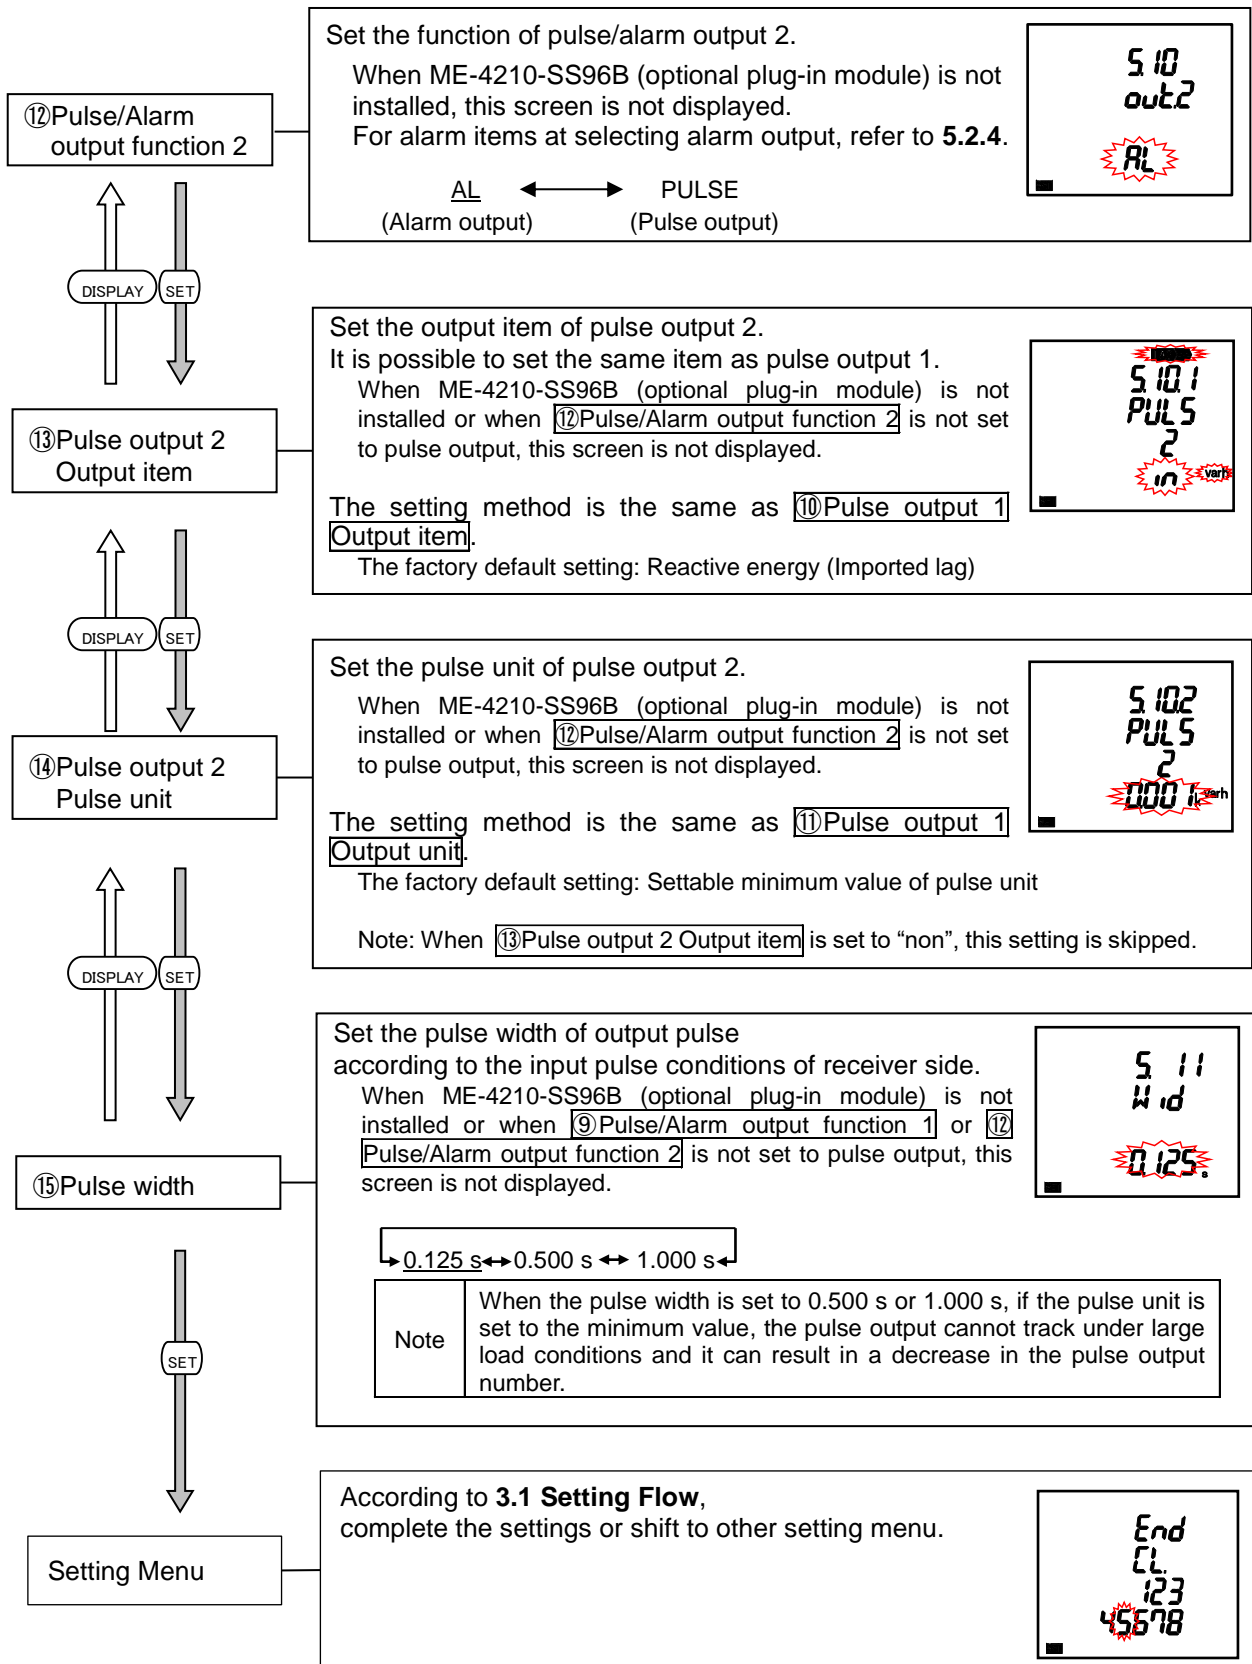

|      |      |         |       |
|------|------|---------|-------|
| 1 s  | 15 s | 1 min   | 4 min |
| 3 s  | 20 s | 1.5 min | 5 min |
| 5 s  | 30 s | 2 min   |       |
| 10 s | 45 s | 3 min   |       |

### 3. How to Set up

#### 3.8 Setting Menu 5: Pulse/Alarm Settings (Settings for Upper/Lower Limit Alarm, Motor Starting Current Mask Function, and Pulse Output)

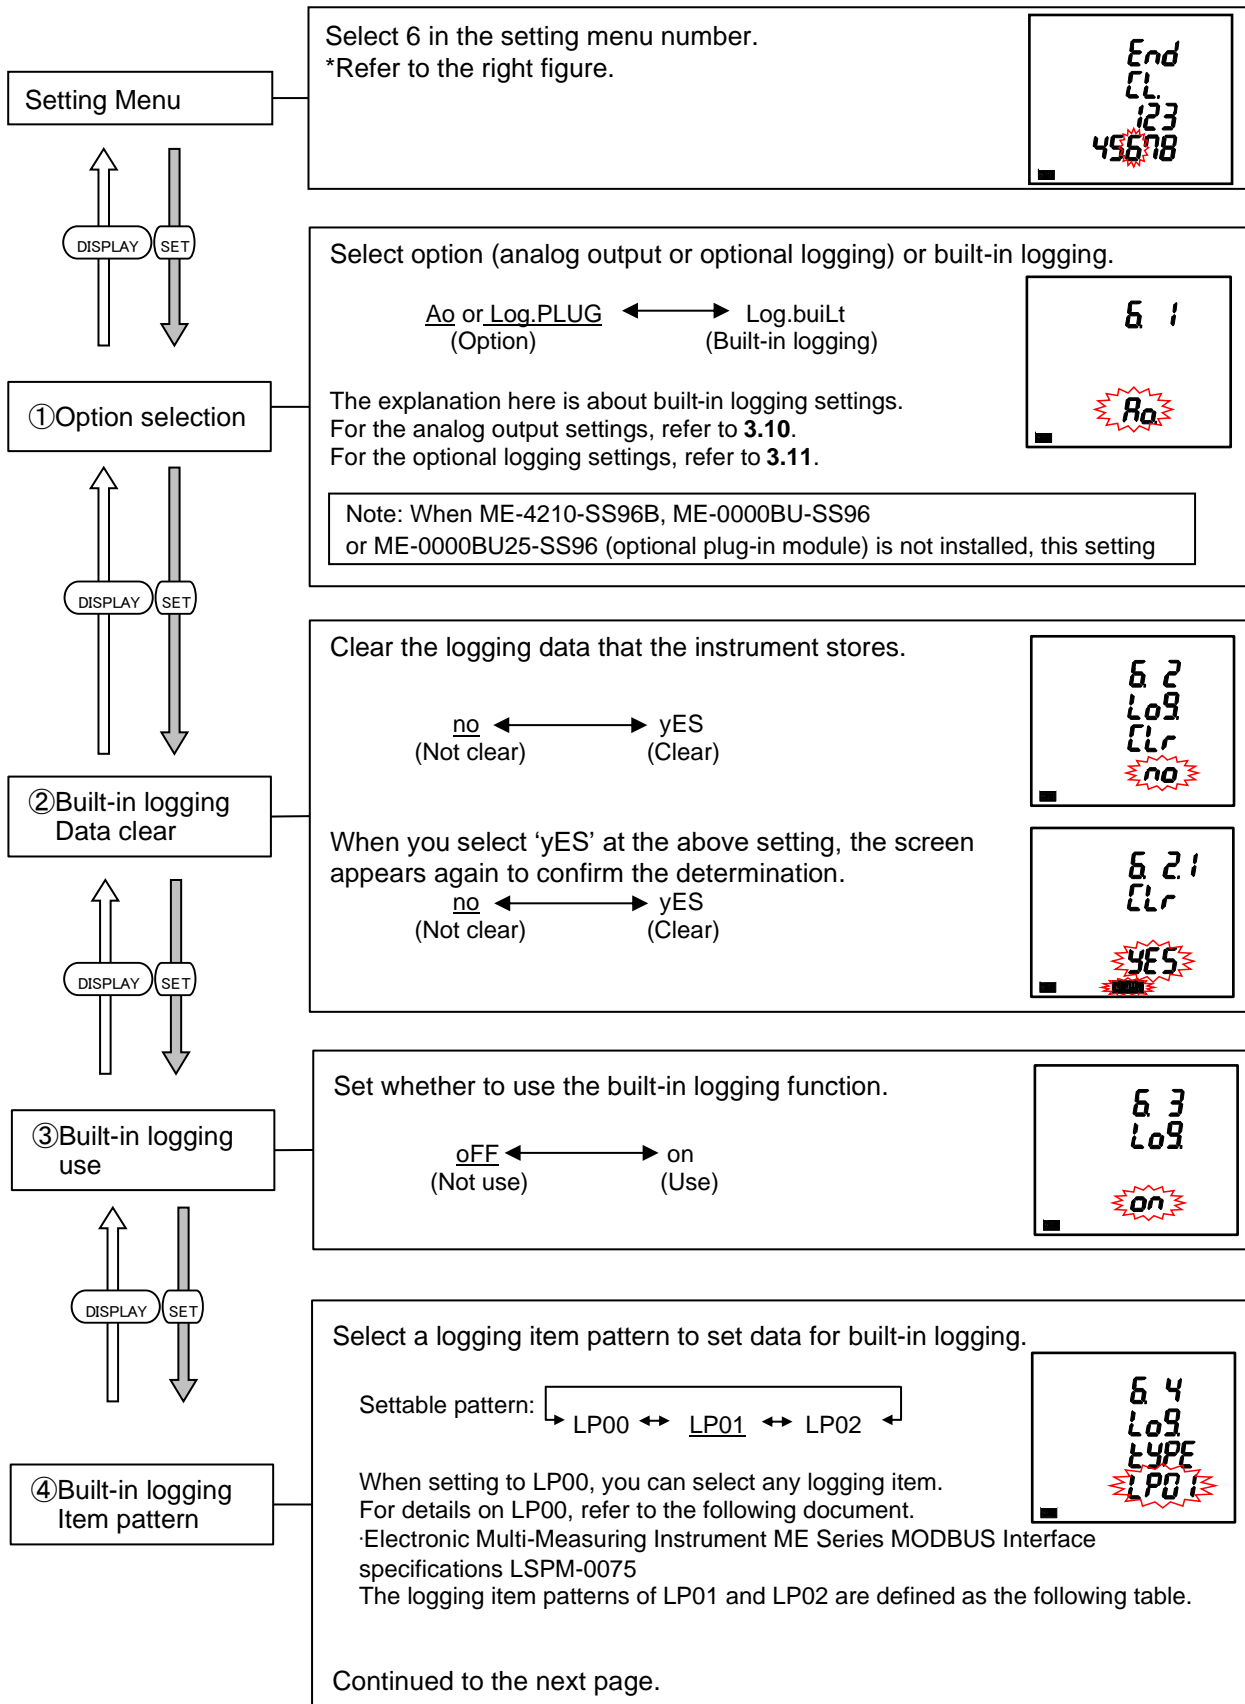

### 3. How to Set up

#### 3.9. Setting Menu 6: Built-in Logging Settings

You will set the built-in logging.

In the operating mode, press **(SET)** and **(RESET)** simultaneously for 2 seconds or more to enter the following operation.

### 3. How to Set up

| Logging measuring data (Data other than integrated value) 15 | THD <sub>V12</sub>   | -                    |

Set the logging period of the built-in logging.

→ 15 min ↔ 30 min ↔ 60 min ←

According to **3.1 Setting Flow**, complete the settings or shift to other setting menu.

### 3. How to Set up

#### 3.10. Setting Menu 6: Analog Output Settings

<The installation conditions for optional plug-in module>  
ME-4210-SS96B installation

You will set the analog output.

In the operating mode, press **(SET)** and **(RESET)** simultaneously for 2 seconds or more to enter the following operation.

Setting Menu

↑

DISPLAY

↓

SET

① Option selection

↑

DISPLAY

↓

SET

② Analog output CH1 output item

↑

DISPLAY

↓

SET

Select 6 in the setting menu number.  
\*Refer to the right figure.

Select option (analog output) or built-in logging.

$A_o$  (Option) ← → Log.built (Built-in logging)

The explanation here is about analog output settings.  
For the built-in logging settings, refer to 3.9.

Set the output item of analog output CH1.  
Select an output measuring item from the following table.

(1) When set to 3-phase 4-wire system

| 3-phase 4-wire system              |                            |                             |
|------------------------------------|----------------------------|-----------------------------|
| non                                | V <sub>12</sub>            | PF <sub>1</sub>             |
| A <sub>1</sub>                     | V <sub>23</sub>            | PF <sub>2</sub>             |
| A <sub>2</sub>                     | V <sub>31</sub>            | PF <sub>3</sub>             |
| A <sub>3</sub>                     | V <sub>AVG</sub> (L-L)     | <u>PF<sub>Σ</sub> (CH4)</u> |
| A <sub>N</sub>                     | W <sub>1</sub>             | Hz                          |
| <u>A<sub>AVG</sub> (CH1)</u>       | W <sub>2</sub>             | HI <sub>1</sub>             |
| DA <sub>1</sub>                    | W <sub>3</sub>             | HI <sub>2</sub>             |
| DA <sub>2</sub>                    | <u>W<sub>Σ</sub> (CH3)</u> | HI <sub>3</sub>             |
| DA <sub>3</sub>                    | var <sub>1</sub>           | HI <sub>N</sub>             |
| DA <sub>N</sub>                    | var <sub>2</sub>           | THD <sub>V1N</sub>          |
| DA <sub>AVG</sub>                  | var <sub>3</sub>           | THD <sub>V2N</sub>          |
| V <sub>1N</sub>                    | var <sub>Σ</sub>           | THD <sub>V3N</sub>          |
| V <sub>2N</sub>                    | VA <sub>1</sub>            |                             |
| V <sub>3N</sub>                    | VA <sub>2</sub>            |                             |
| <u>V<sub>AVG</sub> (L-N) (CH2)</u> | VA <sub>3</sub>            |                             |
|                                    | VA <sub>Σ</sub>            |                             |

AVG: Average value, Σ: Total RMS value

Note1: The same measuring item can be set for each CH.

Note2: The measuring items not included in the display pattern you set can be selected.

Note3: Channels set to 'non' have the minimum output (4mA). In addition, it proceeds to the next CH setting.

Note4: The underlined measuring items represent the factory default settings assigned to each CH

Note5: VA is output with a scaling of 0 to 100% (the percentage of a standard value). For details on how to calculate the standard value, refer to 6.2.

Note6: Hz is output with a scaling of 40 Hz to 50 Hz to 55 Hz for 50 Hz setting and 55 Hz to 60 Hz to 65 Hz for 60 Hz setting.

Note7: For HI, the harmonic current total RMS value is output with a scaling of 0 to 60% (the percentage of the primary current setting). For THD<sub>v</sub>, the harmonic voltage total distortion ratio is output with a scaling of 0 to 20%.

② Analog output CH1 output item

Note1: The same measuring item can be set for each CH. AVG: Average value

Note2: The measuring items not included in display pattern you set can be selected.

Note3: Channels set to 'non' have the minimum output (4mA). In addition, it proceeds to the next CH setting.

Note4: The underlined measuring items represent the factory default settings assigned to each CH

Note5: VA is output with a scaling of 0 to 100% (the percentage of a standard value). For details on how to calculate the standard value, refer to 6.2.

Note6: Hz is output with a scaling of 40 Hz to 50 Hz to 55 Hz for 50 Hz setting and 55 Hz to 60 Hz to 65 Hz for 60 Hz setting.

Note7: For HI, the harmonic current total RMS value is output with a scaling of 0 to 60% (the percentage of the primary current setting).

For THD<sub>v</sub>, the harmonic voltage total distortion ratio is output with a scaling of 0 to 20%.

### 3. How to Set up

#### 3.10 Setting Menu 6: Analog Output Settings

Set the details for analog output CH1.

\*The following settings can be set separately from measuring items included in the display pattern.

This setting is necessary when [2 Analog output CH1 Output item] is set to current, demand current, voltage, active power, reactive power, or power factor. If it is set to other element, the setting will be skipped.

(1) When the output item is set to current or demand current.

(a) Select the CT primary current value or a special primary current value to set the max output value of analog output.

| Output item | Setting range  |
|-------------|--|
| A           | CT primary current value ←→ SP.  |
| DA          | (Setting menu 1.4.1 Primary current setting value) (Special primary current value) |

(b) When selecting 'SP' at (a), select a max output value from the following range.

| Output item | Setting range *1  |
|-------------|---|
| A           | + 3 STEP (Approximately 120% of CT primary current setting value) |
| DA          | ± 0 STEP (100%: CT primary current setting value)                 |
|             | - 10 STEP (Approximately 40% of CT primary current setting value) |

To the next CH setting

\*1: For details on how to calculate STEP and setting range, refer to 6.2.

③ Analog output CH1 detailed settings

(2) When the output item is set to voltage, select a max output value from the following range.

| Output item | Setting range *1                                 |
|-------------|--|
| V           | + 10 STEP (Approximately 250% of standard value) |
|             | ± 0 STEP (100%: Standard value)                  |
|             | - 18 STEP (Approximately 20% of standard value)  |

To the next CH setting

\*1: For details on how to calculate the standard value and STEP, refer to 6.2.

(3) When the output item is set to active power or reactive power.

(a) Select a max output value from the following range.

| Output item | Setting range *1                                |
|-------------|---|
| W var       | + 3 STEP (Approximately 120% of standard value) |
|             | ± 0 STEP (100%: Standard value)                 |
|             | - 18 STEP (Approximately 20% of standard value) |

\*1: For details on how to calculate the standard value and STEP, refer to 6.2.

(b) When the output item is set to active power, select single deflection or double deflection for analog output. (When the output item is reactive power, the double deflection only is available.)

| Output item | Setting range                          |
|-------------|--|
| W           | Single deflection ←→ Double deflection |

### 3. How to Set up

#### 3.10 Setting Menu 6: Analog Output Settings

Continued from the previous page.

(4) When the output item is set to power factor, select an output range.

| Output item | Setting range                     |
|-------------|-----------------------------------|
| PF          | -0.5 to 1 to 0.5 ← → -0 to 1 to 0 |

<Relationship with input and output>

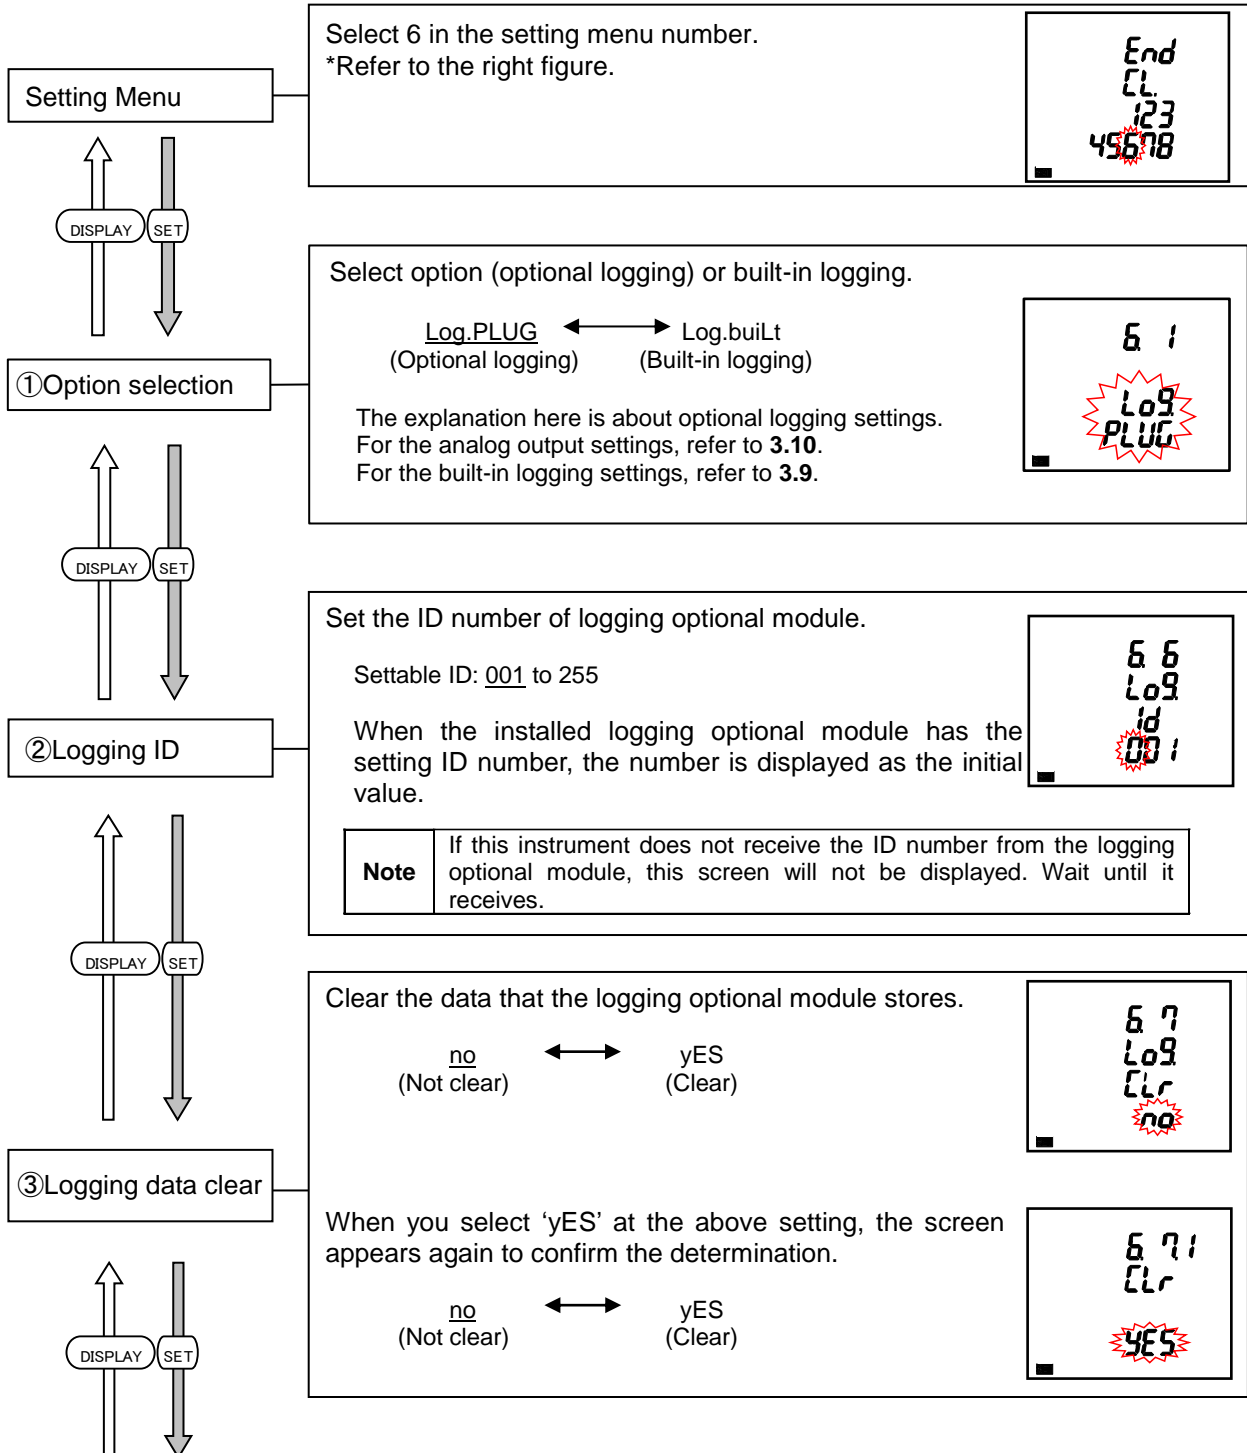

### 3. How to Set up

#### 3.11. Setting Menu 6: Optional Logging settings

<The installation conditions for optional plug-in module>  
ME-0000BU-SS96 or ME-0000BU25-SS96 installation

You will set the optional logging.

In the operating mode, press **SET** and **RESET** simultaneously for 2 seconds or more to enter the following operation.

### 3. How to Set up

#### 3.11 Setting Menu 6: Optional Logging settings

④ Logging item pattern

⑤ Detailed data Logging period

Setting Menu

Select a logging item pattern to set data for logging.

Settable pattern: 

When setting to LP00, you can select any logging item.  
For details on LP00, refer to the following document.

- ME-0000BU-SS96 Logging function specifications.....LSPM-0092
- ME-0000BU25-SS96 Logging function specifications...LSPM-0106

For LP01 and LP02, the logging item pattern is defined as the following table.  
The detailed data is recorded in a period shorter than 1-hour data. The logging period of the detailed data is set at ⑤ Detailed data logging period.

Phase wire system: 3-phase 4-wire

| Logging item pattern | LP01                |                      | LP02                   |                      |
|----------------------|---------------------|----------------------|------------------------|----------------------|
|                      | Detailed data       | 1-hour data          | Detailed data          | 1-hour data          |
| Data 1               | Wh (Imported)       | Wh (Imported)        | Wh (Imported)          | Wh (Imported)        |
| Data 2               | varh (Imported lag) | Wh (Exported)        | A <sub>AVG</sub>       | Wh (Exported)        |
| Data 3               | VAh                 | varh (Imported lag)  | V <sub>AVG</sub> (L-L) | varh (Imported lag)  |
| Data 4               | DW (Last value)     | varh (Imported lead) | ΣW                     | varh (Imported lead) |
| Data 5               | Dvar (Last value)   | VAh                  | ΣPF                    | VAh                  |
| Data 6               | DVA (Last value)    | Non                  | Hz                     | Non                  |

Phase wire system: 3-phase 3-wire\_2CT, 3-phase 3-wire\_3CT, 1-phase 3-wire

| Logging item pattern | LP01                |                      | LP02             |                      |
|----------------------|---------------------|----------------------|------------------|----------------------|
|                      | Detailed data       | 1-hour data          | Detailed data    | 1-hour data          |
| Data 1               | Wh (Imported)       | Wh (Imported)        | Wh (Imported)    | Wh (Imported)        |
| Data 2               | varh (Imported lag) | Wh (Exported)        | A <sub>AVG</sub> | Wh (Exported)        |
| Data 3               | VAh                 | varh (Imported lag)  | V <sub>AVG</sub> | varh (Imported lag)  |
| Data 4               | DW (Last value)     | varh (Imported lead) | W                | varh (Imported lead) |
| Data 5               | Dvar (Last value)   | VAh                  | PF               | VAh                  |
| Data 6               | DVA (Last value)    | Non                  | Hz               | Non                  |

Phase wire system: 1-phase 2-wire

| Logging item pattern | LP01                |                      | LP02          |                      |
|----------------------|---------------------|----------------------|---------------|----------------------|
|                      | Detailed data       | 1-hour data          | Detailed data | 1-hour data          |
| Data 1               | Wh (Imported)       | Wh (Imported)        | Wh (Imported) | Wh (Imported)        |
| Data 2               | varh (Imported lag) | Wh (Exported)        | A1            | Wh (Exported)        |
| Data 3               | VAh                 | varh (Imported lag)  | V12           | varh (Imported lag)  |
| Data 4               | DW (Last value)     | varh (Imported lead) | W             | varh (Imported lead) |
| Data 5               | Dvar (Last value)   | VAh                  | PF            | VAh                  |
| Data 6               | DVA (Last value)    | Non                  | Hz            | Non                  |

Set the logging period for detailed data of LP01 or LP02 of logging item pattern.

According to **3.1 Setting Flow**, complete the settings or shift to other setting menu.

### 3. How to Set up

#### 3.12. Setting Menu 7: Settings for Periodic active Energy, Rolling Demand, and Digital Input/Output

You will set the periodic active energy, rolling demand, and digital input/output.

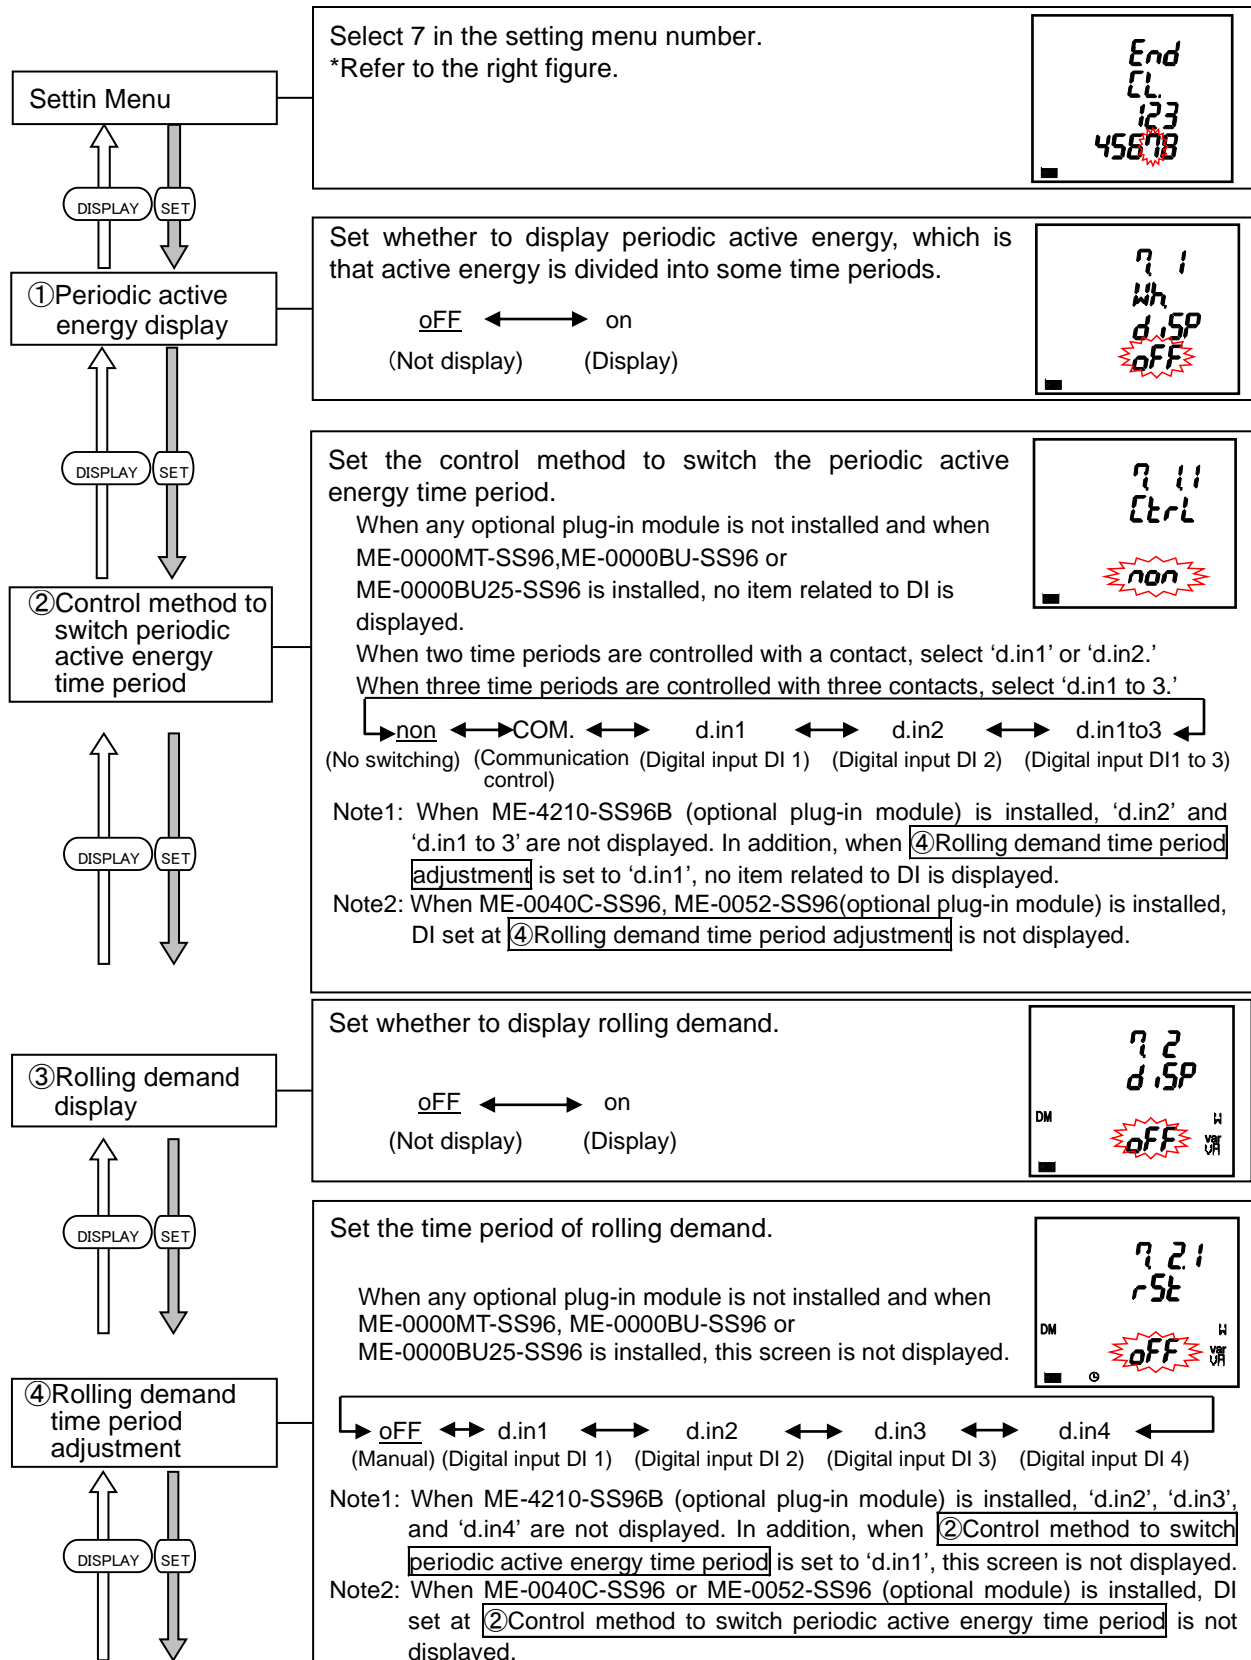

In the operating mode, press **SET** and **RESET** simultaneously for 2 seconds or more to enter the following operation.

For details about each function, refer to the corresponding section.

Periodic active energy ⇒ See 5.2.5 to 5.2.6.

Rolling demand ⇒ See 5.2.7 to 5.2.10.

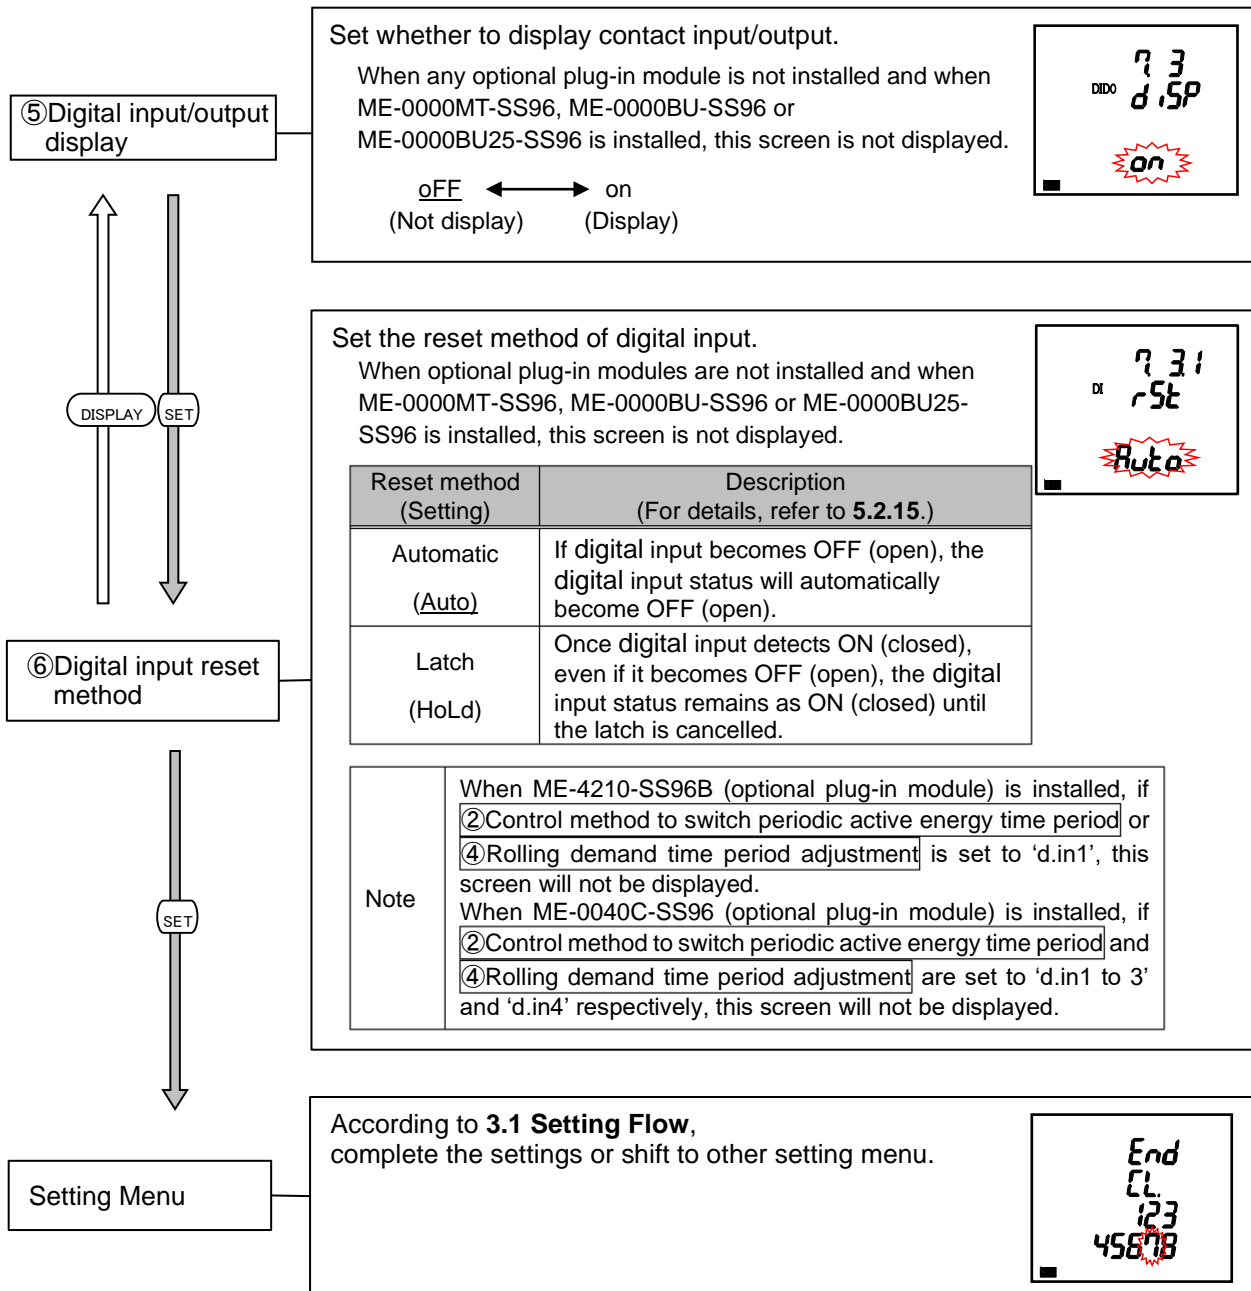

Digital input/output ⇒ See to 5.2.155.2.15 to 5.2.165.2.16.

### 3. How to Set up

#### 3.12 Setting Menu 7: Settings for Periodic active Energy, Rolling Demand, and Digital Input/Output

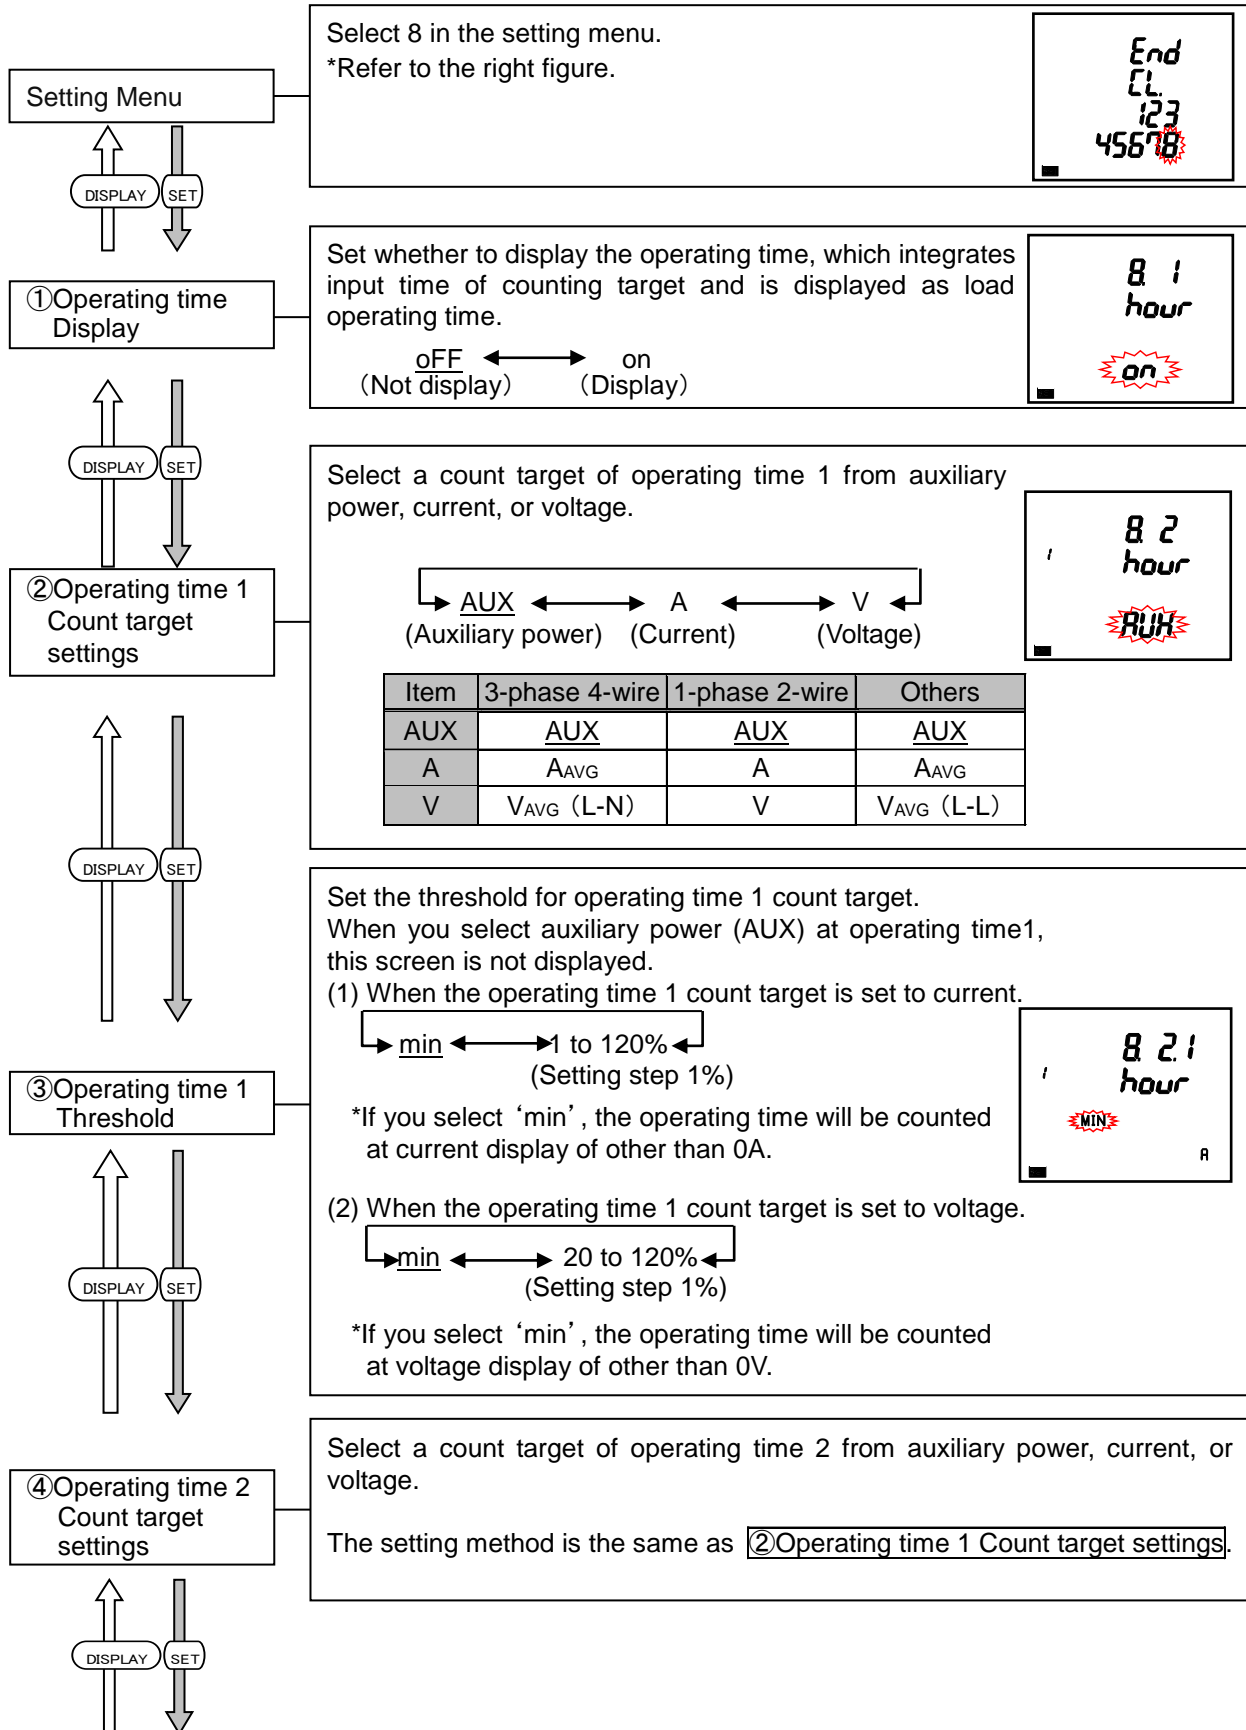

### 3. How to Set up

#### 3.13. Setting Menu 8: Special Settings (Settings for Operating Time, IEC Mode, and CO<sub>2</sub> equivalent)

You will set the operating time and IEC mode.

In the operating mode, press (SET) and (RESET) simultaneously for 2 seconds or more to enter the following operation.

For details about each function, refer to the corresponding section.  
 Operating time ⇒ See 5.2.11 to 5.2.12.

### 3. How to Set up

#### 3.13. Setting Menu 8: Special Settings (Settings for Operating Time, IEC Mode, and CO<sub>2</sub> equivalent)

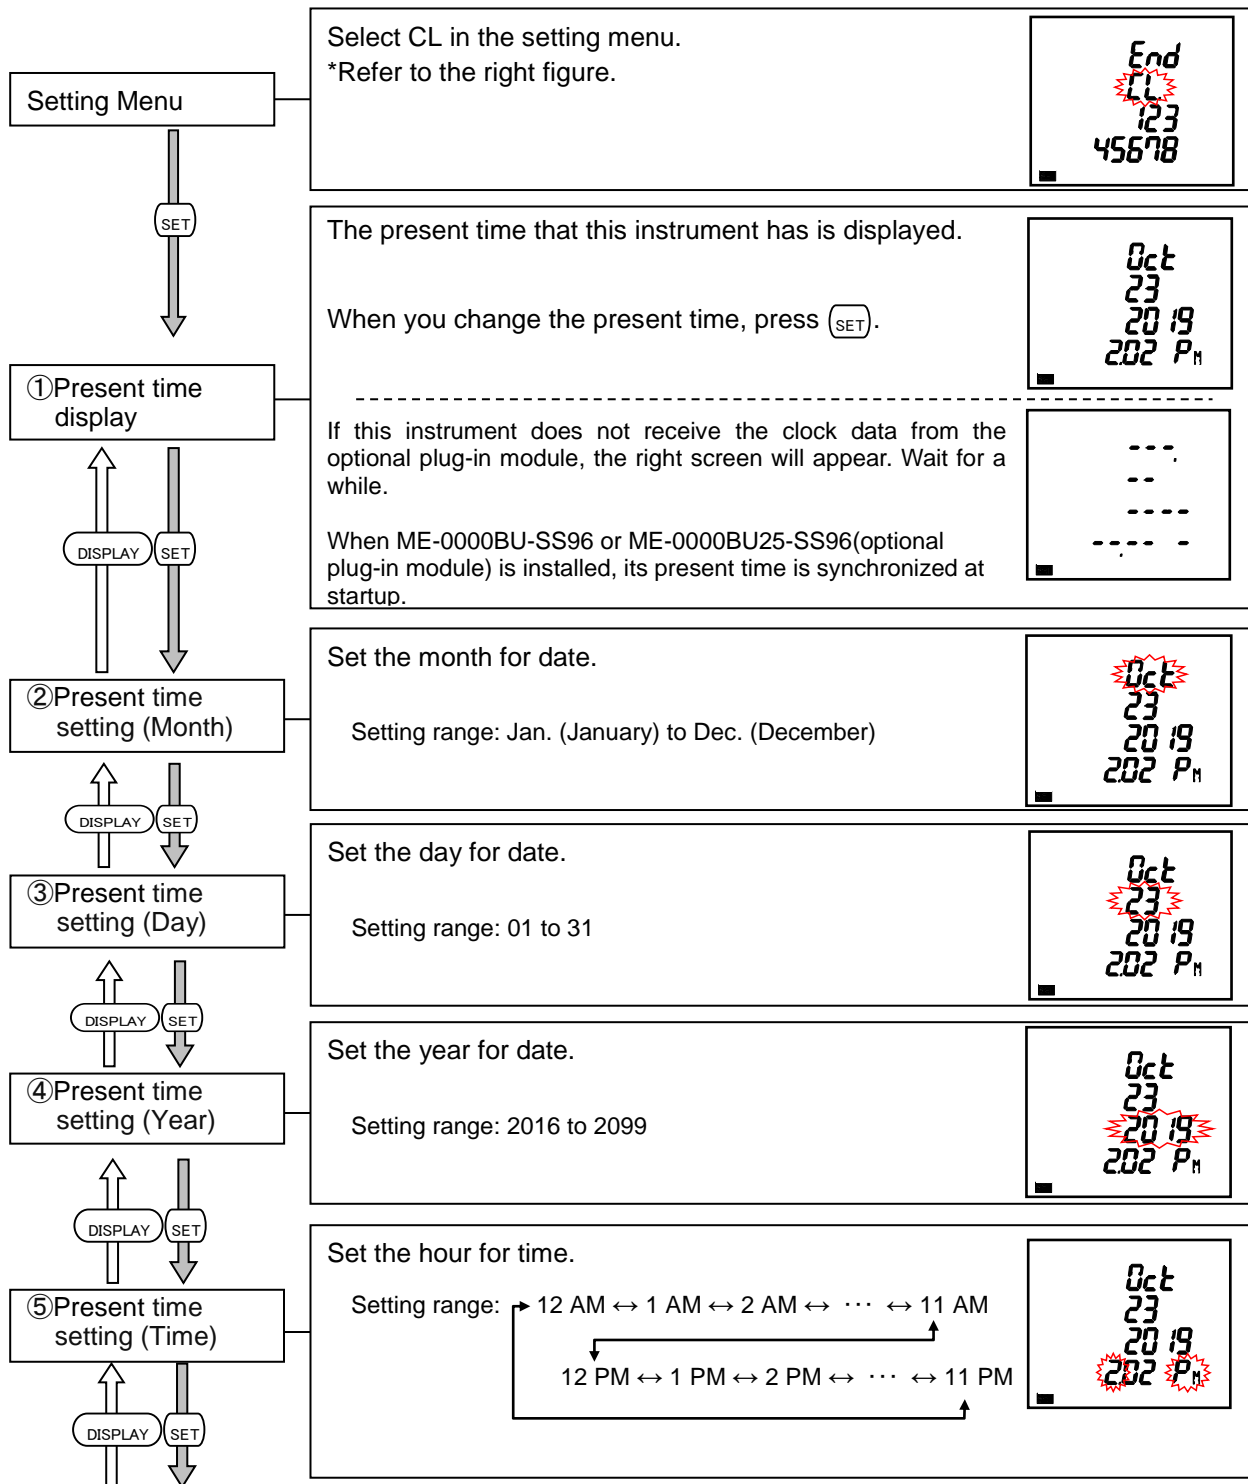

### 3. How to Set up

#### 3.14. Setting Menu CL: Preset Time Settings

You will set the time necessary when data logging is executed.  
 When the built-in logging function is set to 'oFF (Not use)', and when ME-0000BU-SS96 or ME-0000BU25-SS96 (optional plug-in module) is not installed, this menu is not displayed.  
 In the operating mode, press **SET** and **RESET** simultaneously for 2 seconds or more to enter the following operation.

|   |  |
|---|--|
|  | <p>If the present time were changed from the time displayed at <b>①Current time display</b> to the date before/after 31 days, all logging data in ME-0000BU-SS96 or ME-0000BU25-SS96 (optional plug-in module) would be deleted. If you change the present time, output the logging data to a SD memory card beforehand, confirm that the data is correctly stored on a PC, and change the settings.</p> |
|---|--|

### 3. How to Set up

#### 3.14. Setting Menu CL: Current Time Settings

|             |  |
|-------------|--|
| <b>Note</b> | <ol style="list-style-type: none"> <li>1. The present time can be set with MODBUS RTU or MODBUS TCP communication. For details on the setting, refer to Electronic Multi-Measuring Instrument ME Series MODBUS Interface specifications (Ref. No. LSPM-0075).</li> <li>2. The clock accuracy is <math>\pm 1</math> minute per month, typical (at +25°C). To adjust the clock drift, regularly perform the present time setting.</li> <li>3. In order to use the built-in logging function, be sure to set the present time. Otherwise, the function will not operate.</li> <li>4. The clock of the built-in logging function is not equipped with power interruption backup. After the startup, be sure to set the present time setting.<br/>When an optional plug-in module of ME-0000BU-SS96 or ME-0000BU25-SS96 is installed, the power interruption backup of the clock operation is executed because it has the built-in battery for backup.</li> <li>5. After the present time setting, when an optional plug-in module of ME-0000BU-SS96 or ME-0000BU25-SS96 is installed, set the present time again.</li> </ol> |
|-------------|--|

### 3. How to Set up

#### 3.15. Setting Confirmation Menu 1 to 9: Confirming the Settings in the Setting Menu 1 to 8 and 9 Test Mode

##### ●Setting Confirmation

In the operating mode, press  for 2 seconds or more to execute the operation.

Setting confirmation menu

In the setting confirmation menu, the screen switching and operation methods are the same as the setting menu 1 to 8. For details, refer to each setting menu.

Note: In the setting confirmation mode, setting change is not possible.

##### ●Test Mode

In the operating mode, press  for 2 seconds or more and then set the setting confirmation menu number to 9 to enter the test mode.

For details about how to use the test mode, refer to **4 How to Use Test Mode**.

### 3. How to Set up

#### 3.16. Initialization of Related Items by Changing a Setting

When you change a setting, the related setting items and measuring data (maximum and minimum values) are initialized. For details, refer to the following table.

| Setting item to be changed                                     |  | Menu 1  |                   | Menu 2               |                    | Menu 5              | Menu 6              |                              |                    | Menu 8                           |                               | Optional module change |                         |                               |                               |                   |  |  |   |   |

●: It turns to the default setting.

○: It turns to the default setting according to the phase wire system.

Note1: For 1-phase 3-wire system, the setting change between '1N2 display' and '1N3 display' does not cause initialization.

Note2: The communication option unit is reset.

### 3. How to Set up

#### 3.17. Initialization of All Settings

The following operation enables to reset all settings to the factory default. It is only for the settings. Measured active energy, reactive energy, and operating time are not changed.

For details on the initialization of maximum and minimum values, refer to **3.16 Initialization of Related Items by Changing a Setting**.

\*For example, if the phase wire system setting is changed by initializing all settings, all maximum and minimum values will be reset.

To initialize all settings, display the CANCEL screen in the setting mode and then execute the following operation.

For details on how to display the CANCEL screen, refer to **3.1 Setting Flow**.

**Note**

When all settings are initialized, back up the logging data before the initialization.

### 3. How to Set up

#### 3.18. Settings for Special Display Pattern P00

If you want to set a display pattern other than P01 or P02, P00 is available to freely set display items. This setting is conducted in the setting menu 1. The explanation here begins with the settings for P00 at **②Display pattern** in the setting menu 1. For other operations, which are not explained here, refer to **3.2 Setting Menu 1**.

(1) Max four screens are available and 16 measuring items can be displayed.

From the first line to the third line, each selectable item is A, DA, V, W, var, VA, PF, or Hz. At the fourth line, Wh, -Wh, varh, and VAh are selectable.

(2) As an example, the following display pattern is used for explanation.

(3) How to set up

**②Display pattern**

You will set up a display pattern.

- (1) Select 'P00.'  
Select 'P00' with (+) or (-) and then press (SET).
- (2) Set the first line to 'DM A' in the screen 4-1.  
Select 'DM A' with (+) or (-) and then press (SET).
- (3) Set the second line to 'V' in the screen 4-1.  
Select 'V' with (+) or (-) and then press (SET).
- (4) Set the third line to no display in the screen 4-1.  
Select '---' with (+) or (-) and then press (SET).
- (5) Set the fourth line to no display in the screen 4-1.  
Select '---' with (+) or (-) and then press (SET).

### 3. How to Set up

#### 3.18. Settings for Special Display Pattern P00

Continued form the previous page

- (6) You will set up the display of screen 4-2.  
Select 'yES' with (+) or (-) and then press (SET).

\*When the screen 2 is not necessary to display,  
select 'no' and press (SET).

- (7) Set the first line to 'W' in the screen 4-2.  
Select 'W' with (+) or (-) and then press (SET).

- (8) Set the second line to 'var' in the screen 4-2.  
Select 'var' with (+) or (-) and then press (SET).

- (9) Set the third line to 'PF' in the screen 4-2.  
Select 'PF' with (+) or (-) and then press (SET).

- (10) Set the fourth line to 'Wh' in the screen 4-2.  
Select 'Wh' with (+) or (-) and then press (SET).

- (11) Set the screen 4-3 to hidden.  
Select 'no' with (+) or (-) and then press (SET).

Note: When you set the screen 4-3 to hidden,  
the screen 4-4 is automatically set to hidden.

(Return to the settings  
of the upper line in  
the screen 4-1.)

③VT/Direct voltage

(Hereafter same as the setting menu 1)

|             |   |
|-------------|---|
| <b>Note</b> | <ol style="list-style-type: none"> <li>1. The following measuring items cannot be set in the display pattern of P00.<br/>Set them in the setting menu 3 and 8.<br/>•Harmonic current, Harmonic voltage, Current unbalance rate, Voltage unbalance rate, Operating time, CO<sub>2</sub> equivalent</li> <li>2. It is not possible to specify phases of current and voltage. In the operating mode, press (PHASE) to switch the phase.</li> <li>3. The following measuring items can be set for 3-phase 4-wire system only.<br/>•Current N-phase, Current demand N-phase</li> </ol> |
|-------------|---|

### 3. How to Set up

#### 3.19. Example for Easy Setup

The following example illustrates an easy setup.

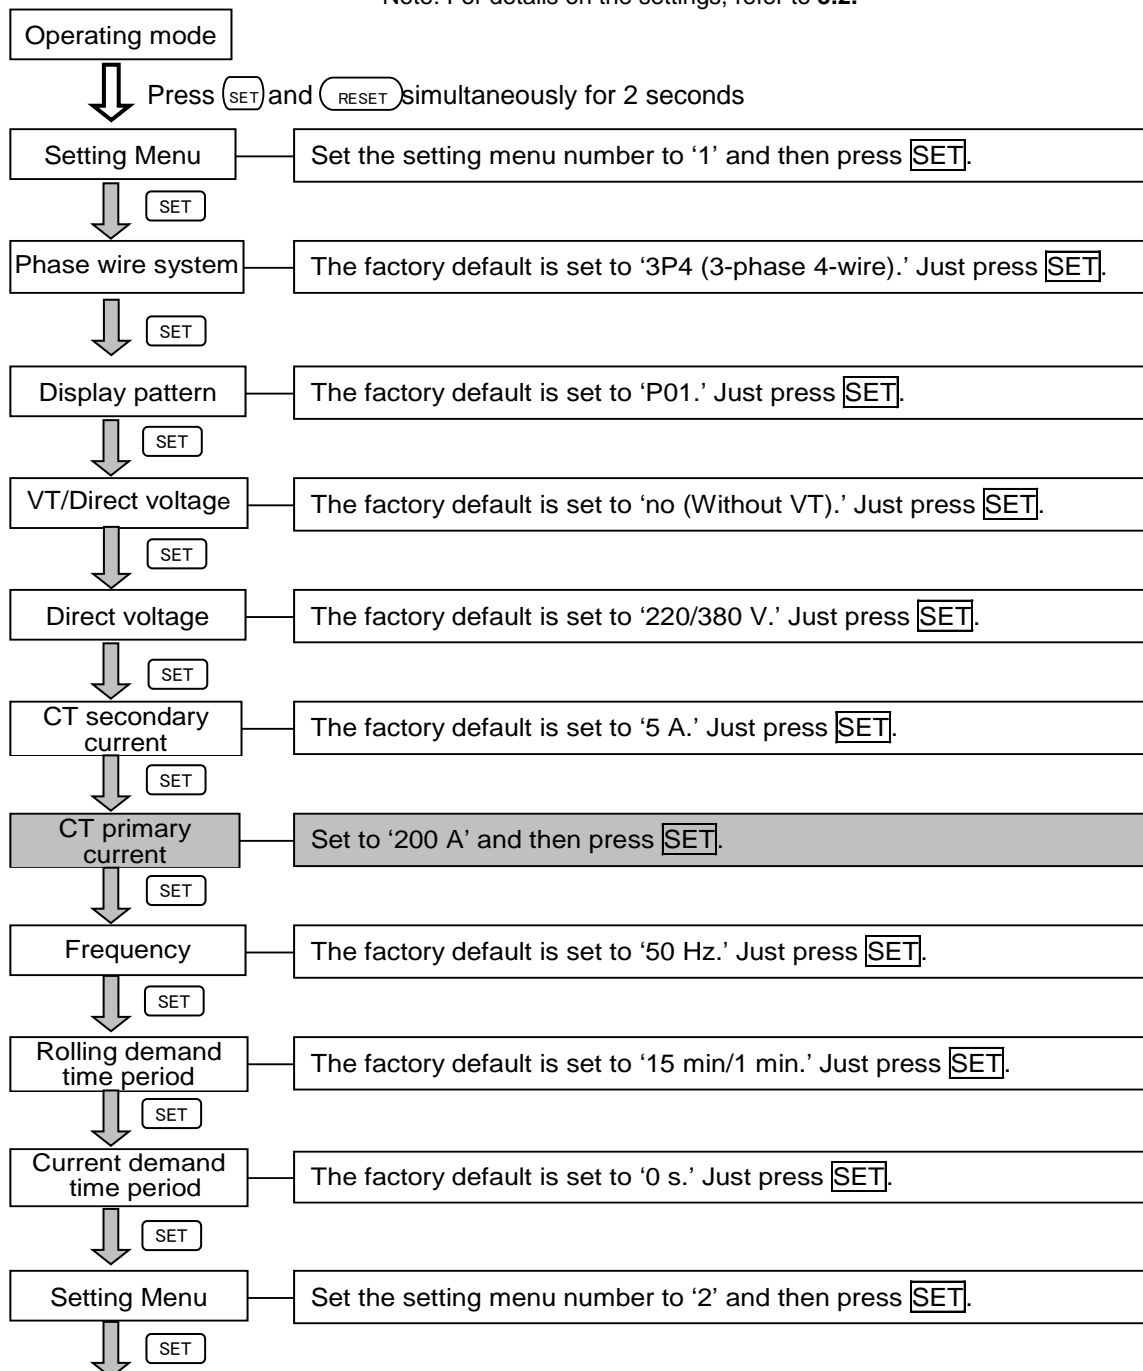

##### ■ Setting Example

- Model: ME96SSRB-MB (without optional plug-in module)
- Phase wire system: 3-phase 4-wire
- Measuring element: A, V, W, PF
- Input Voltage: 220/380 V
- CT primary current: 200 A
- CT Secondary current: 5 A
- Frequency: 50 Hz
- MODBUS RTU: Address: 1, Baud rates: 19.2 kbps, Parity: even, Stop bit: 1

##### ■ Setting Procedure

 shows the item where setting change is necessary.

Note: For details on the settings, refer to 3.2.

### 3. How to Set up

#### 3.19. Example for Easy Setup

## 4. How to Use Test Mode

The test mode has function useful for startup of equipment.  
The following table shows a list of functions in the test mode.

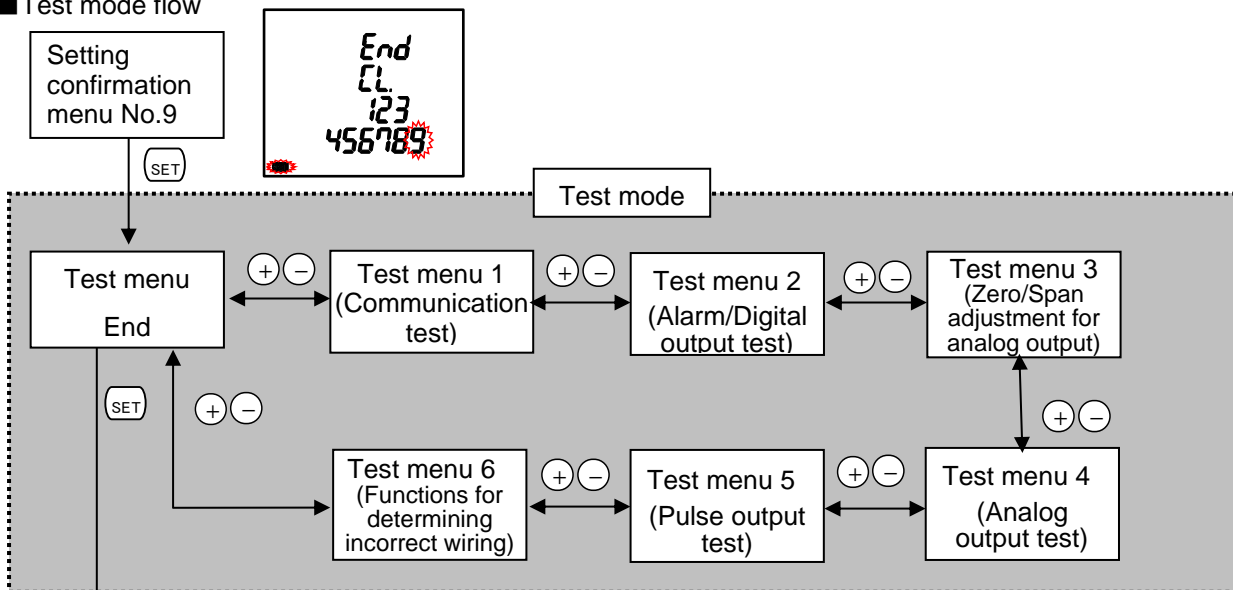

| Test menu                                     | Description  |
|---|--|
| 1. Communication test                         | For models with communication function, without measurement (voltage/current) input, it is possible to return fixed numerical data. Use this for checking with the host system.  |
| 2. Alarm output/ Digital output test          | For models with alarm/digital output function, without measurement (voltage/current) input, it is possible to check alarm output (digital output) operation. Use the check of connection with the destination.   |
| 3. Zero/Span adjustment for analog output     | For the model with analog output function, zero/span adjustment is possible for analog output. Use it for adjustment to the receiver side or output change.  |
| 4. Analog output test                         | For the model with analog output function, without measurement (voltage/current) input, it is possible to check analog output operation. Use the check for connection with the receiver side.  |
| 5. Pulse output test                          | For the model with pulse output function, without measurement (voltage/current) input, it is possible to check pulse output operation. Use the check for connection with the receiver side.  |
| 6. Functions for determining incorrect wiring | <p>①Pattern display for incorrect wiring<br/>When either a voltage input or current input is incorrectly wired, this function automatically determines incorrect wiring and displays its part on the screen. It is easier to find out the incorrect part and useful to check the connection. *Note</p> <p>②Support display for determining incorrect wiring<br/>This function displays a current phase angle, a voltage phase angle, and active power, voltage, and current value of each phase. By checking each display and <b>9.3 A List of Examples for Incorrect Wiring Display</b>, it is easier to determine incorrect wiring of measurement (voltage/current) input.</p> |

\*Note: The function cannot determine all incorrect wiring. If both a voltage input and current input are incorrectly wired, a different pattern may be displayed.

### Test procedure

- ① Press **(SET)** for 2 seconds to enter the setting confirmation mode.
- ② With **(+)** or **(-)**, select '9' in the setting confirmation menu number
- ③ Press **(SET)** to enter the test mode.
- ④ Execute the test in each test menu.

### Test mode flow

Note: The screen momentarily goes off.

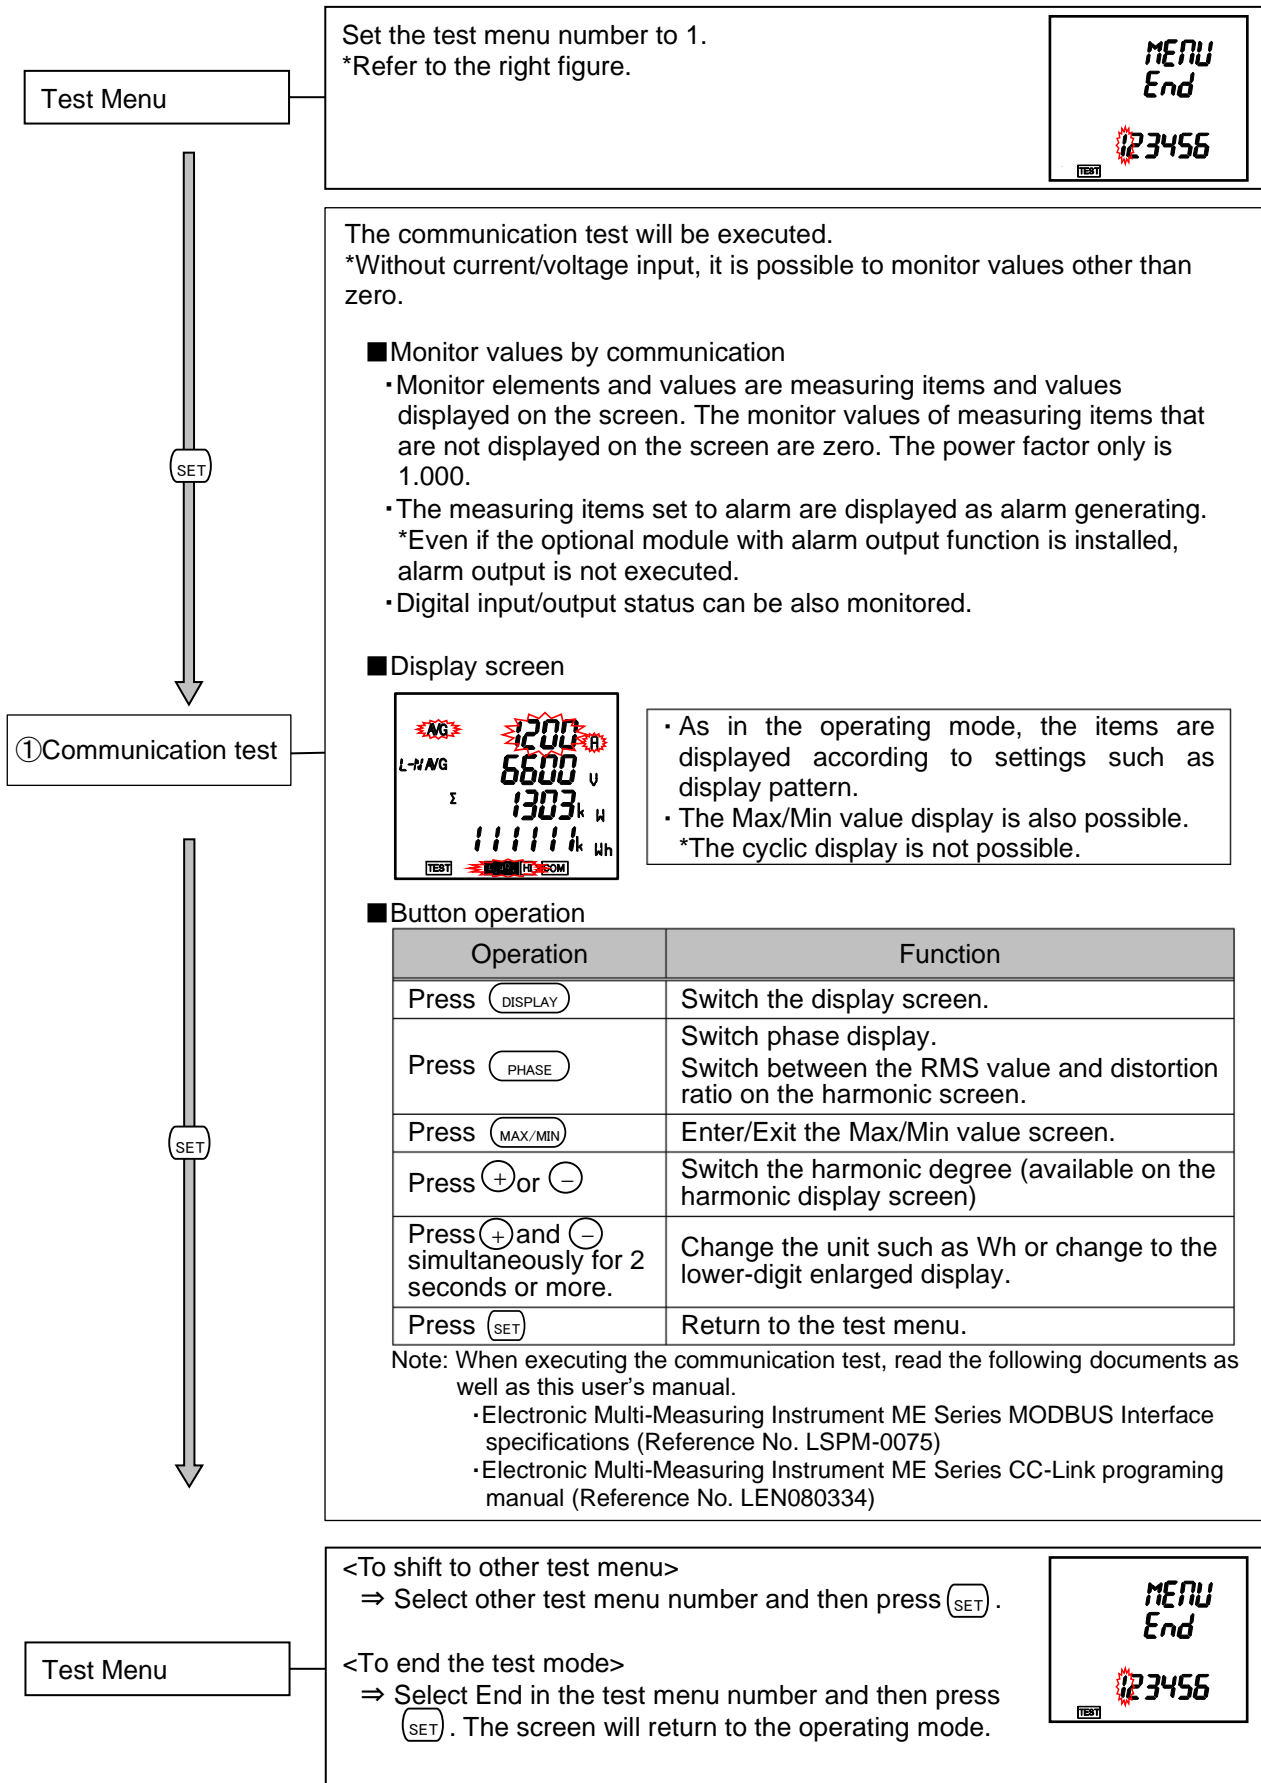

### Operating mode

| Note |  |
|------|--|
|      | 1. When ME-0000BU-SS96 or ME-0000BU25-SS96 is activated, entering the test mode causes the power outage of ME-0000BU-SS96 or ME-0000BU25-SS96 so as not to log the test data. As a result, the system log is recorded for power outage and <b>COM</b> of the LED blinks. |
|      | 2. Entering from the test mode to the operating mode restarts this instrument. Therefore, if the built-in logging function is activated, the system log for startup will be recorded. In addition, the present time setting is required again.                           |

## 4. How to Use Test Mode

### 4.1. Test Menu 1: Communication Test

Set the setting confirmation menu number to 9 to enter the test mode  
 In the test mode, the following operation is available.

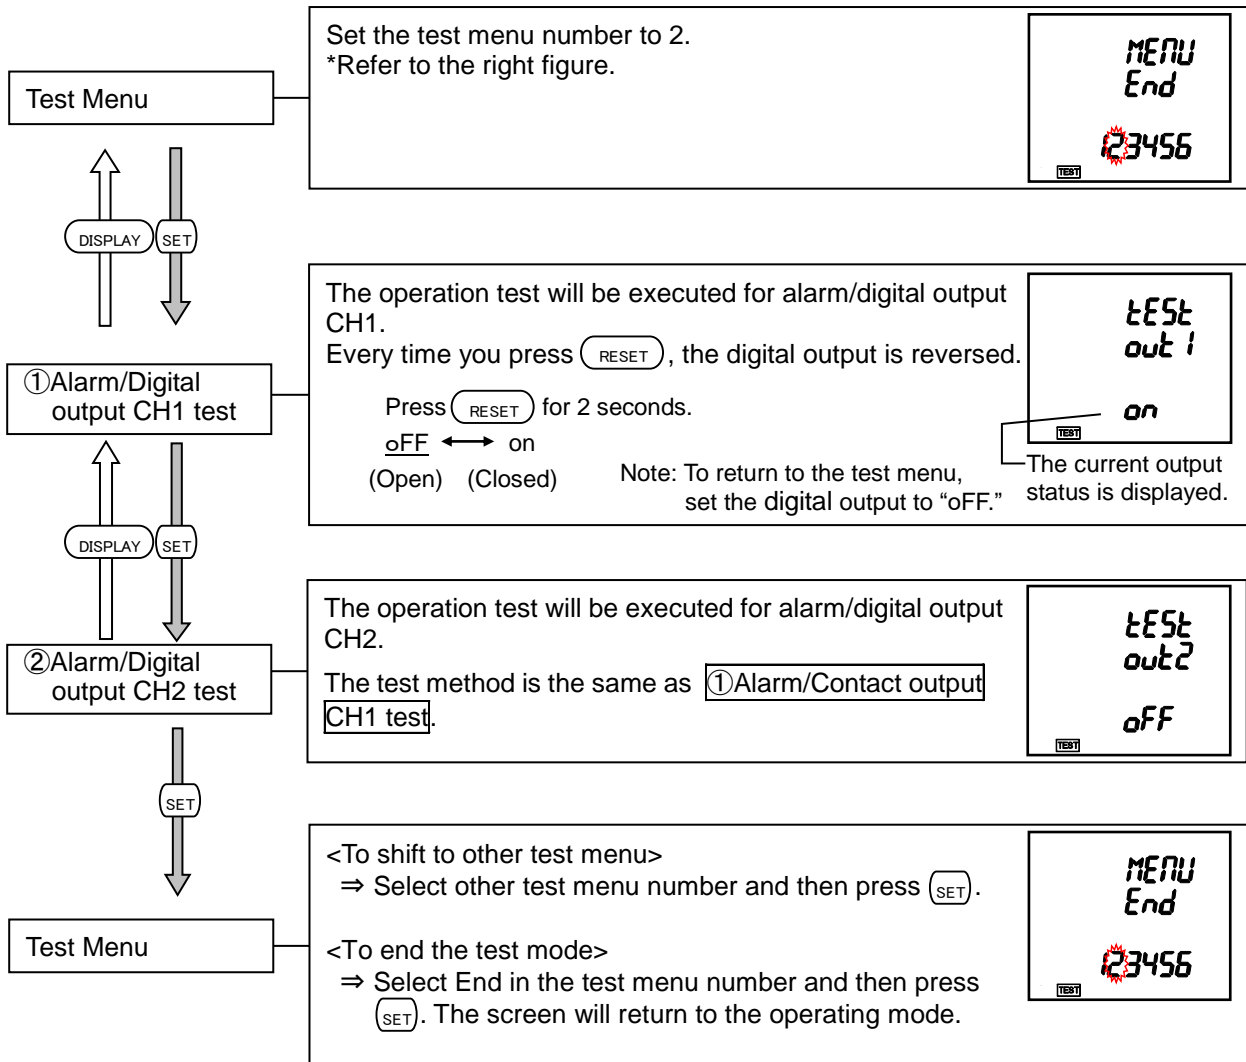

## 4. How to Use Test Mode

### 4.2. Test Menu 2: Alarm Output/Digital Output Test

In the test mode, the following operation is available.

- When ME-4210-SS96B or ME-0052-SS96 (optional plug-in module) is not installed, this menu is not displayed.
- Even when ME-4210-SS96B (optional plug-in module) is installed, if alarm output is not set at the setting menu 5: Pulse/Alarm output function, this menu will not be displayed.
- When ME-4210-SS96B (optional plug-in module) is installed, if alarm output is set for CH1 only at the setting menu 5: Pulse/Alarm output function, the screen for **②Alarm/Digital output CH2 test** will not be displayed. Likewise, if alarm output is set for CH2 only, the screen for **①Alarm/Digital output CH1 test** will not be displayed.

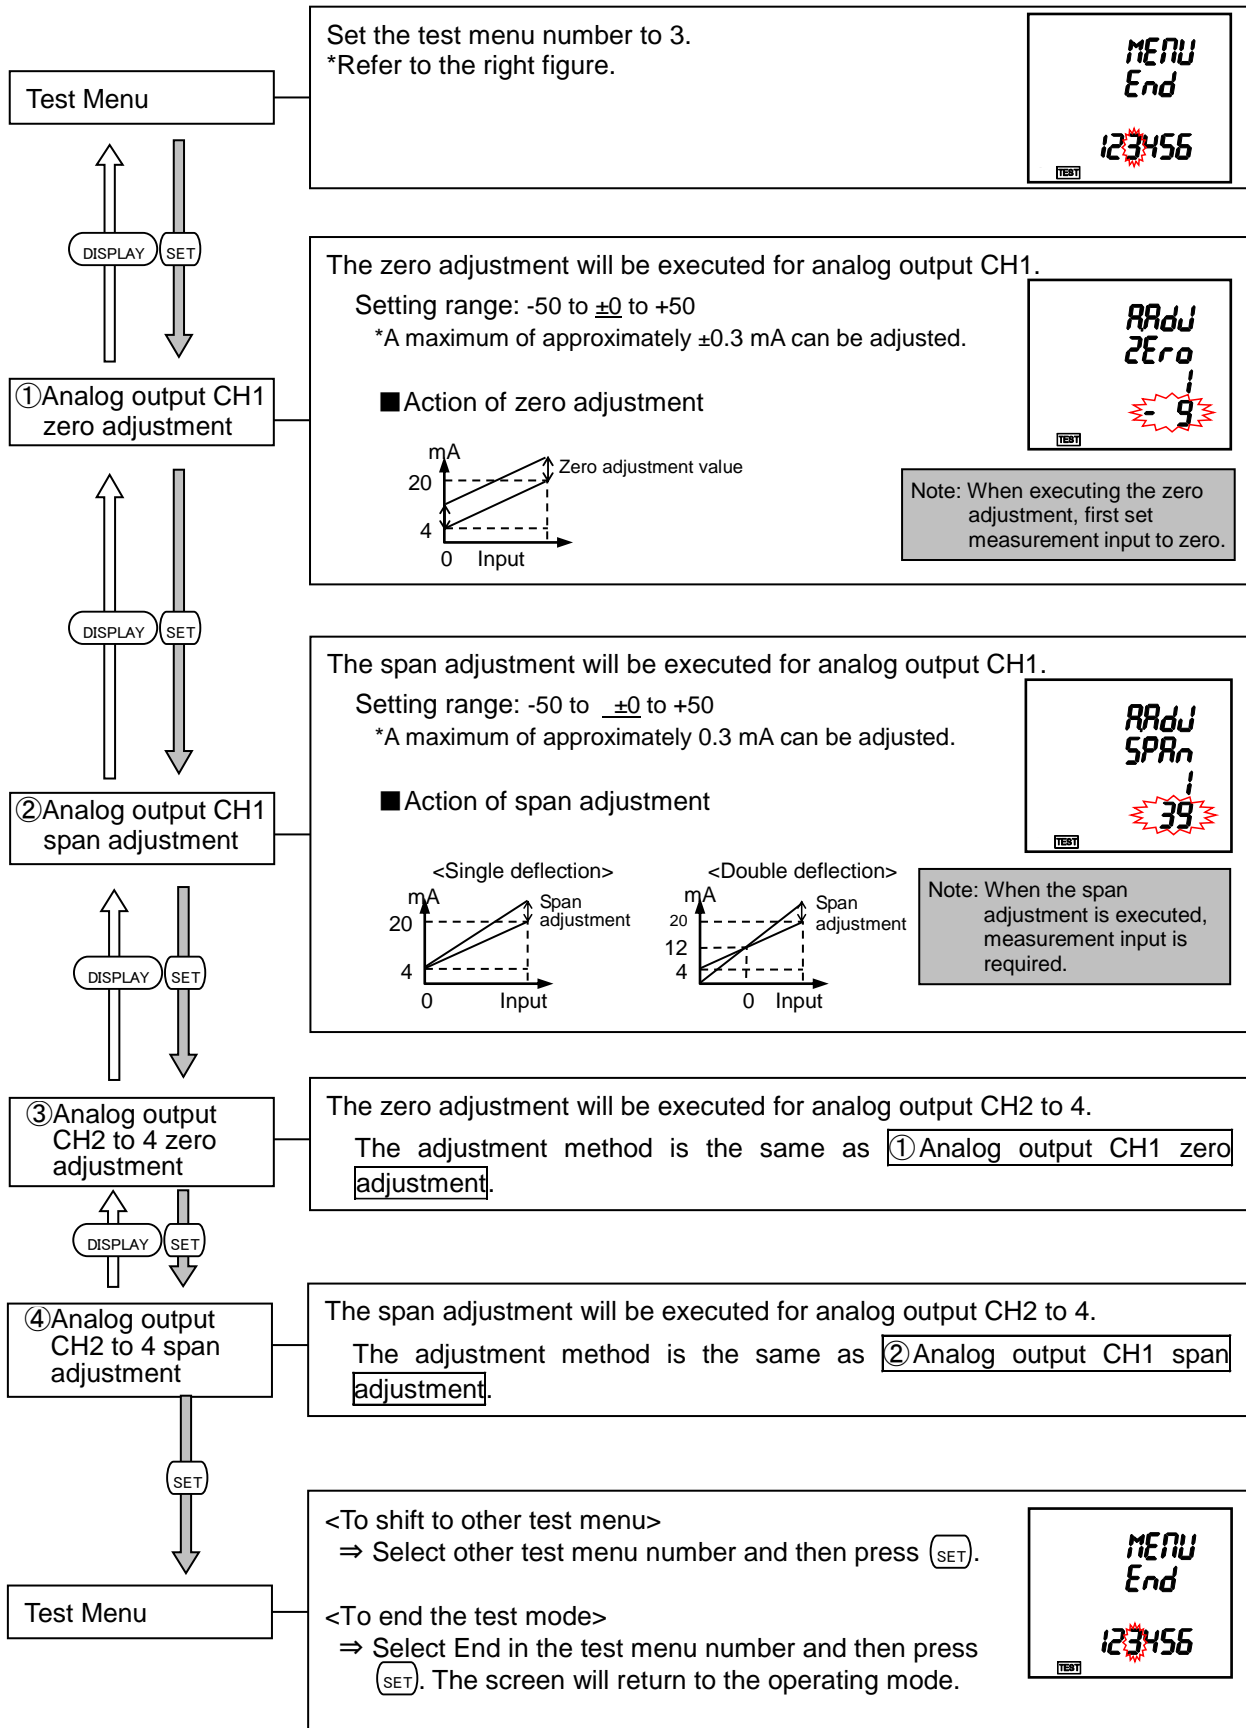

## 4. How to Use Test Mode

### 4.3. Test Menu 3: Zero/Span Adjustment for Analog Output

In the test mode, the following operation is available.

When ME-4210-SS96B (optional plug-in module) is not installed, this screen is not displayed.

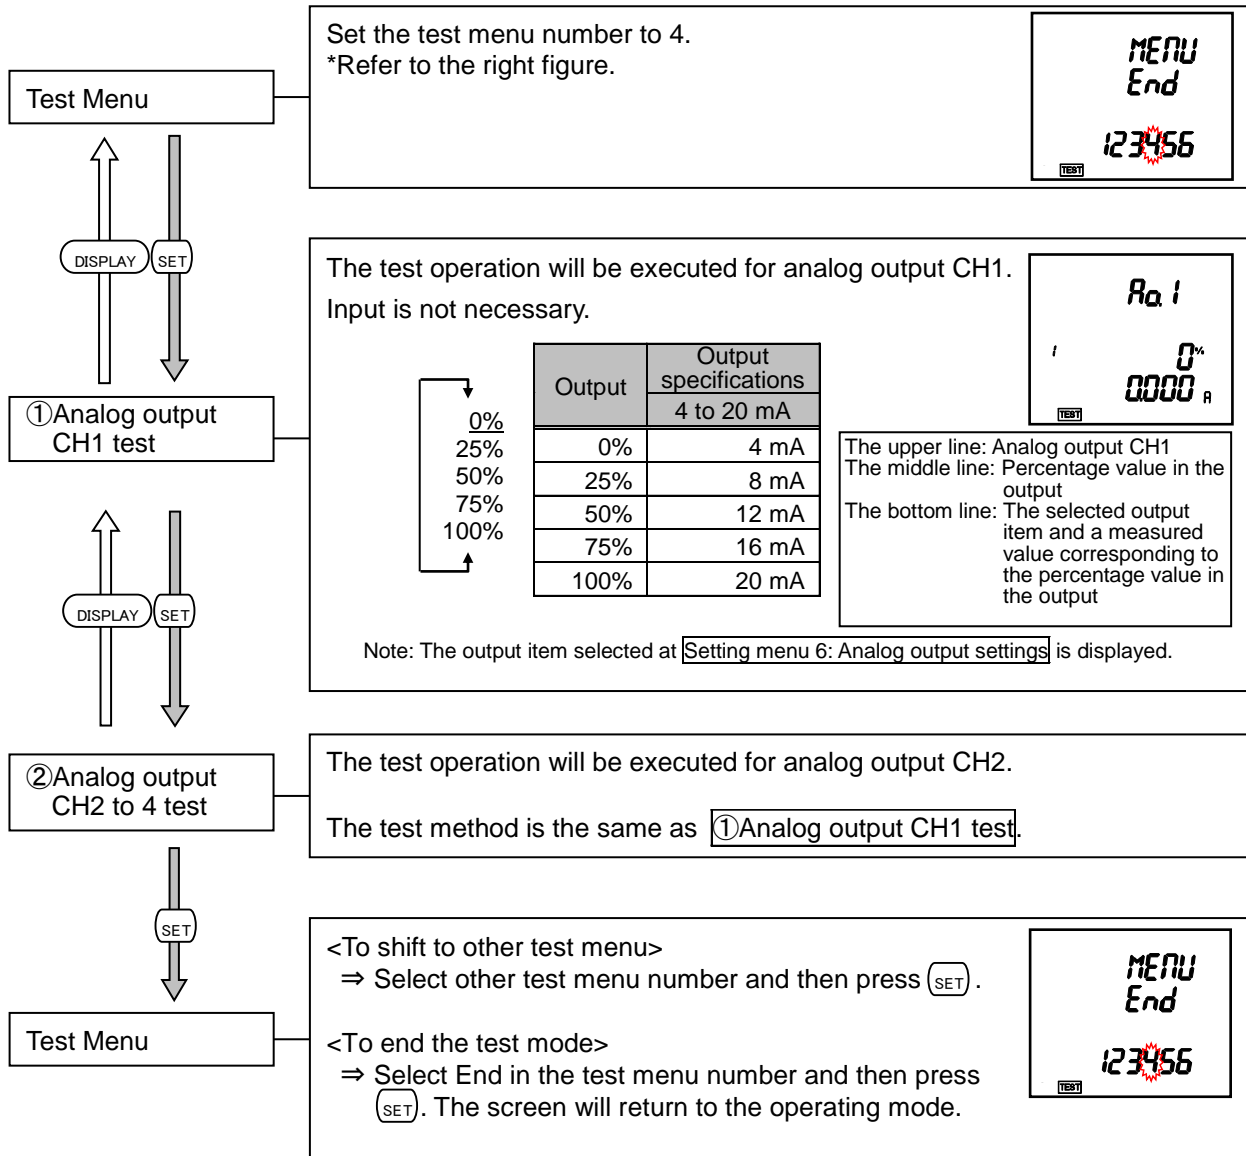

## 4. How to Use Test Mode

### 4.4. Test Menu 4: Analog Output Test

In the test mode, the following operation is available.

When ME-4210-SS96B (optional plug-in module) is not installed, this menu is not displayed.

## 4. How to Use Test Mode

### 4.5. Test Menu 5: Pulse Output Test

In the test mode, the following operation is available.

- When ME-4210-SS96B (optional plug-in module) is not installed, this menu is not displayed.
- Even when ME-4210-SS96B (optional plug-in module) is installed, if pulse output is not set at the setting menu 5: Pulse/Alarm output function, this menu will not be displayed.
- When ME-4210-SS96B (optional plug-in module) is installed, if pulse output is set for CH1 only at the setting menu 5: Pulse/Alarm output function, the screen for **②Pulse output CH2 test** will not be displayed. Likewise, if pulse output is set for CH2 only, the screen for **①Pulse output CH1 test** will not be displayed.

## 4. How to Use Test Mode

### 4.6. Test Menu 6: Function for Determining Incorrect Wiring

In the test mode, the following operation is available.

Test Menu

Set the test menu number to 6.  
\*Refer to the right figure.

MENU  
End

123456

↑

↓

DISPLAY

SET

When either a voltage input or a current input is incorrectly wired, this function automatically determines incorrect wiring and the incorrect part is displayed on the screen. After checking it, press (SET) to return to the test menu.

Example of correct wiring

Example of incorrect wiring:  
Reverse connection of 1 side CT

The incorrect wiring part blinks.  
\*1  
The correct one is ON.  
The number of incorrect wiring pattern appears.  
\*For details on the pattern, refer to 4.6.1.

\*1. For 3-phase 3-wire system, the PN terminal is displayed as 'P2' on the screen. Read as 'PN.'

■ Select a power factor condition (For 3-phase 3-wire system)  
For 3-phase 3-wire system, the following screen may be displayed to select a power factor condition according to the incorrect wiring situation.  
With (+) or (-), select a power factor condition and then press (SET).  
When the settings are determined, the incorrect wiring part is displayed on the screen.

Power factor: LAG

+

→

Power factor: Around 1

+

→

Power factor: LEAD

Note: Select a power factor condition by referring to the following points:

- Power factor: LAG → Power factor is lagging for load of inductive machines. Assume 1 to lag 0.5.
- Power factor: Around 1 → Power factor is around 1 due to resistance load or power factor improvement. Assume lead 0.866 to lag 0.866.
- Power factor: LEAD → Power factor is leading for capacitor panel. Assume lead 0 to 1.

\*If the Err display appears at the bottom line of the LCD, press (-) and then select the power factor condition again.

■ Check multiple alternatives (For 3-phase 3-wire/1-phase 3-wire/1-phase 2-wire system)  
There may be multiple patterns of incorrect wiring according to the incorrect wiring situation. For the above three systems, press (DISPLAY) to switch the screen and check the incorrect wiring patterns.

Display the first pattern in the three patterns.

DISPLAY

→

DISPLAY

→

■ There are multiple incorrect wiring parts. (For 3-phase 4-wire system)  
For this phase wire system, multiple incorrect wiring parts of voltage or those of current are detected and displayed on each screen.

Example of voltage

Example of current

① Pattern display of incorrect wiring

## 4. How to Use Test Mode

### 4.6. Test Menu 6: Function for Determining Incorrect Wiring

Continued from the previous page.

■ It is not possible to detect incorrect wiring

If the screen is displayed as the following, it is not possible to detect incorrect wiring.

Check measurement (voltage/current) input or press (+) to check ②Support display for determining incorrect wiring.

| Display | Description  |
|---------|--|
| 01      | This is low voltage. Apply about 70 percent or more of the direct voltage or secondary voltage setting.  |
| 02      | This is low current. Apply about 5 percent or more of the rated current of the instrument.   |
| 03      | This is in an unbalanced state. For 3-phase 3-wire system, it is not possible to detect incorrect wiring if there is a 10 percent or more difference between values in 1-phase and 3-phase of current. |
| 04      | There may be multiple incorrect wiring parts. Check <u>②Support display for determining incorrect wiring.</u>  |

Phase angle, active power, voltage, and current are displayed.

<For 3-phase 4-wire system>

②Support display for determining incorrect wiring

<For 3-phase 3-wire system>

Continued to the next page.

## 4. How to Use Test Mode

### 4.6. Test Menu 6: Function for Determining Incorrect Wiring

Continued from the previous page.

#### ■ Phase angle

The phase angle is displayed clockwise based on  $V_{12}$  (0 degree).

$\angle V_{32}$ -phase angle between  $V_{32}$  and  $V_{12}$

$\angle I_{1}$ -phase angle between  $I_1$  and  $V_{12}$

$\angle I_{3}$ -phase angle between  $I_3$  and  $V_{12}$

Note: For 1-phase 3-wire, read the phase as follows.

$V_{12} \rightarrow V_{1N}$

$V_{32} \rightarrow V_{3N}$

$I_3 \rightarrow I_2$  or  $I_3$

#### ■ Display examples of incorrect wiring support function

For display examples of each incorrect wiring, refer to **9.3 A List of Examples for Incorrect Wiring Display**.

<To shift to other test menu>

⇒ Select other test menu number and then press **SET**.

Test Menu

<To end the test mode>

⇒ Select End in the test menu number and then press **SET**.

The screen will return to the operating mode.

## 4. How to Use Test Mode

### 4.6. Test Menu 6: Function for Determining Incorrect Wiring

#### 4.6.1. Incorrect Wiring Patterns Detected by ①Pattern display of incorrect wiring

This function is designed with the assumption that either a current input or a voltage input is incorrectly wired in positive phase sequence. It is not possible to determine all incorrect wiring. Dashed lines indicate incorrect wiring parts.

■ For 3-phase 4-wire system

| No. | Wiring diagram                      | No. | Wiring diagram                                    | No. | Wiring diagram  | No. | Wiring diagram                                     |
|-----|-------------------------------------|-----|---|-----|---|-----|--|
| 1   | Normal<br>                          | 3   | Reverse connection of 2 side CT<br>               | 8   | Reverse connection of 1 side CT, 2 side CT, and 3 side CT<br> | 13  | Reverse connection between terminals P2 and P3<br> |
|     | Reversed phase sequence 1*1<br>     | 4   | Reverse connection of 3 side CT<br>               | 9   | Switch between 1 side CT and 2 side CT<br>                    | 14  | Reverse connection between terminals P1 and P3<br> |
|     | Reversed phase sequence 2*1<br>     | 5   | Reverse connection of 1 side CT and 2 side CT<br> | 10  | Switch between 2 side CT and 3 side CT<br>                    | 15  | Reverse connection between terminals P1 and PN<br> |
|     | Reversed phase sequence 3*1<br>     | 6   | Reverse connection of 2 side CT and 3 side CT<br> | 11  | Switch between 1 side CT and 3 side CT<br>                    | 16  | Reverse connection between terminals P2 and PN<br> |
| 2   | Reverse connection of 1 side CT<br> | 7   | Reverse connection of 1 side CT and 3 side CT<br> | 12  | Reverse connection between terminals P1 and P2<br>            | 17  | Reverse connection between terminals P3 and PN<br> |

\*1. Correct measurement is possible even in reversed phase sequence.

\*2. For low voltage circuits, it is not necessary to ground the VT and CT secondary side circuits.

## 4. How to Use Test Mode

## 5. Operation

### 5.1. Basic Operation

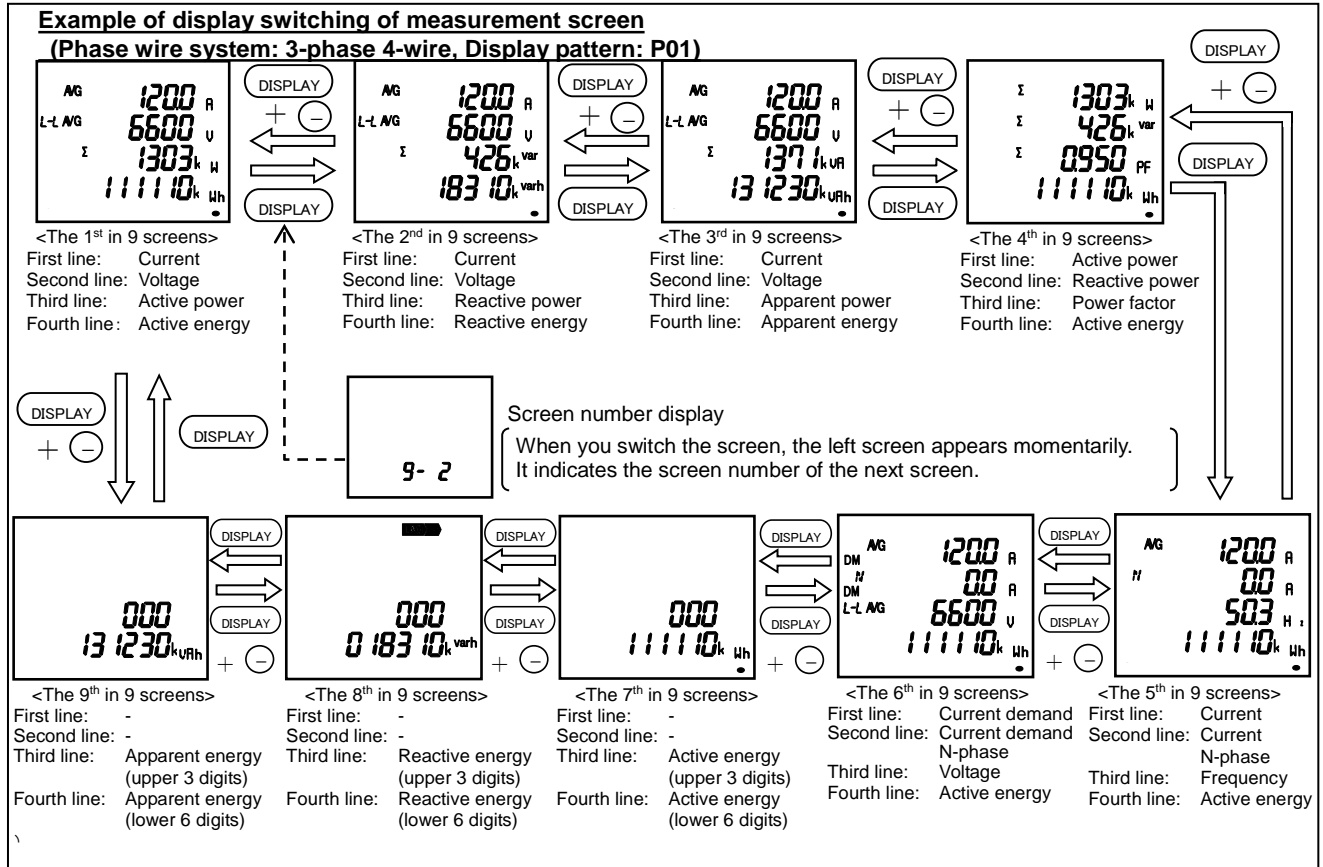

The following charts illustrate how to use basic operation.

#### 5.1.1. How to Switch the Measurement Screen

Press **DISPLAY** to switch the measurement screen.

In addition, by pressing **DISPLAY** and **+** or **-**, the measurement screen is switched in reverse.

The display item and order vary depending on the phase wire system, display pattern, and additional screen. For details on the display pattern, refer to **6.1 Display Pattern List**.

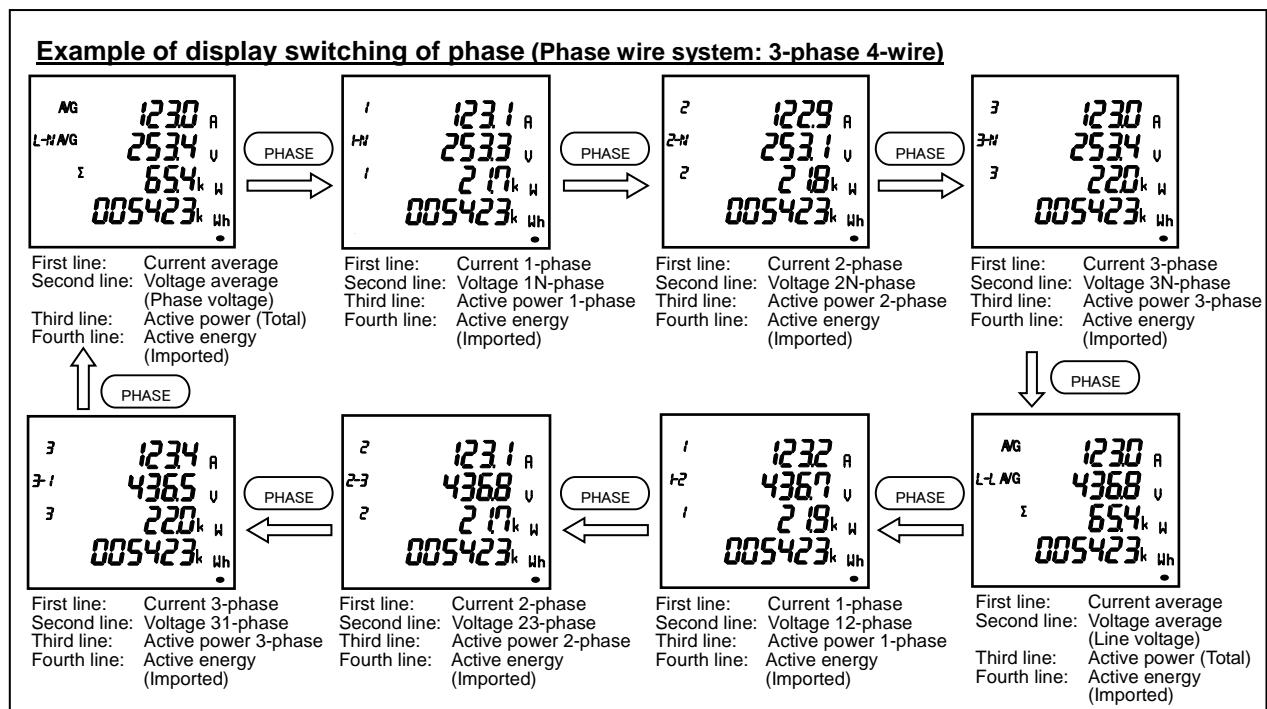

#### 5.1.2. How to Switch Phase Display

Press **PHASE** to switch the phase of voltage/current.

The phase switching is not available in the following cases:

- Measuring element without phase (Frequency)
- Active power, reactive power, apparent power, and power factor for other than 3-phase 4-wire system
- 1-phase 2-wire system setting

## 5. Operation

### 5.1. Basic Operation

#### 5.1.3. How to Display the Cyclic Mode

In the cyclic mode, the measurement screen or phase display automatically switches every 5 seconds. When you press **DISPLAY** for 2 seconds, the screen enters the cyclic display mode of measurement screen. Pressing **PHASE** for 2 seconds enters the cyclic display mode of phase. To end the cyclic mode, press any button other than **SET**.

Note 1: Before shift to the cyclic mode, the screen blinks 3 times.

Note 2: In the cyclic display mode of measurement screen, the screen number is not displayed at switching display.

Note 3: On the Max/Min value screen, the cyclic mode is available.

## 5. Operation

### 5.1. Basic Operation

#### 5.1.4. Harmonics Display

The harmonic RMS value and distortion ratio (content rate) can be displayed.

To display them, you must set the harmonics display. For details on the settings, refer to 3.6.

#### ■ Measuring elements

| Degree   | Harmonic current |                                 | Harmonic current N-phase |                                 | Harmonic voltage |                                 |
|--|------------------|---------------------------------|--------------------------|---------------------------------|------------------|---------------------------------|
|  | RMS value        | Distortion ratio (Content rate) | RMS value                | Distortion ratio (Content rate) | RMS value        | Distortion ratio (Content rate) |
| Harmonic total   | ○                | ○                               | ○                        | —                               | ○                | ○                               |
| 1 <sup>st</sup> (Fundamental wave)   | ○                | —                               | ○                        | —                               | ○                | —                               |
| 3 <sup>rd</sup> , 5 <sup>th</sup> , 7 <sup>th</sup> , 9 <sup>th</sup> , 11 <sup>th</sup> , 13 <sup>th</sup> , 15 <sup>th</sup> , 17 <sup>th</sup> , 19 <sup>th</sup> | ○                | ○                               | ○                        | —                               | ○                | ○                               |

#### ■ Display examples

<Harmonic current total>

<Harmonic voltage 5th>

First line: 1-phase RMS value  
 Second line: 2-phase RMS value  
 Third line: 3-phase RMS value  
 Fourth line: Degree

Note: Degree total is displayed as 'ALL.'

#### ■ How to switch the degree (Phase wire system: 3-phase 4-wire)

Press (+) or (-) to switch the degree.

By pressing (PHASE), the RMS value and distortion ratio (content rate) are switched.

Note: The following table shows no phases in harmonic measurement display.

| Phase wire system |             | Harmonic current | Harmonic voltage |
|-------------------|-------------|------------------|------------------|
| 3-phase 3-wire    | 3CT         | —                | 31-phase         |
|                   | 2CT         | 2-phase          | 31-phase         |
| 1-phase 3-wire    | 1N2 display | N-phase          | 12-phase         |
|                   | 1N3 display | N-phase          | 13-phase         |

## 5. Operation

### 5.1. Basic Operation

#### 5.1.5. Maximum/Minimum Value Display

On the Max/Min value screen, a maximum value, present value, and minimum value are displayed in one screen by measuring item.

- However, for harmonics, the following maximum values only are displayed.
- Harmonic current: The total/1<sup>st</sup> to 19<sup>th</sup> RMS value of the phase where a value was the largest in every phase.
  - Harmonic voltage: The total distortion ratio/1<sup>st</sup> RMS value/3<sup>rd</sup> to 19<sup>th</sup> content rate of the phase where a value was the largest in every phase.

#### ■ Display examples

<Example of Current>

First line: Maximum value  
 Second line: Present value  
 Third line: Minimum value  
 Fourth line: -

<Example of Harmonic current>

Maximum value

Harmonic degree

#### 5.1.6. How to Display Maximum/Minimum Value

When you press (MAX/MIN), the screen switches to the Max/Min value display.

Pressing (MAX/MIN) again returns to the present value display.

Example of display switching between the present value and Max/Min value

Present value display

Max/Min value display

On the Max/Min value screen, the following display switching is available as the present value screen.

| Button operation              | Function  |
|-------------------------------|---|
| Press (DISPLAY)               | Measuring items are switched in the following order.<br>However, measuring items that are not included in the phase wire system, display pattern, and additional screen are not displayed.<br>$\begin{array}{c} \rightarrow A \rightarrow A_N \rightarrow DA \rightarrow DA_N \rightarrow V \rightarrow W \rightarrow var \rightarrow VA \\ \leftarrow V_{unb} \leftarrow A_{unb} \leftarrow HV \leftarrow H_{LN} \leftarrow H_I \leftarrow H_Z \leftarrow PF \leftarrow \end{array}$ Pressing and switches the above item in the reverse direction.  |
| Press (PHASE)                 | For 3-phase 4-wire system, the phases of the measuring items are switched as follows:<br>• A, DA: $\rightarrow AVG \rightarrow 1\text{-phase} \rightarrow 2\text{-phase} \rightarrow 3\text{-phase} \leftarrow$<br>• V: $\rightarrow V_{AVG} (L-N) \rightarrow V_{1N} \rightarrow V_{2N} \rightarrow V_{3N} \rightarrow V_{AVG} (L-L) \rightarrow V_{12} \rightarrow V_{23} \rightarrow V_{31} \leftarrow$<br>• W, var, VA, PF: $\rightarrow \Sigma \rightarrow 1\text{-phase} \rightarrow 2\text{-phase} \rightarrow 3\text{-phase} \leftarrow$<br>• A <sub>N</sub> , DA <sub>N</sub> , and Hz do not have phase switching.<br>For 3-phase 3-wire/1-phase 3-wire system, the phases of A, DA and V are switched.<br>For 1-phase 2-wire system, no phase is switched. |
| Press (+) or (-)              | Switch the harmonic degree (available on the harmonics display screen)  |
| Press (DISPLAY) for 2 seconds | Enter the cyclic display mode of measurement screen   |
| Press (PHASE) for 2 seconds   | Enter the cyclic display mode of phase  |

#### 5.1.7. How to Clear Maximum/Minimum Value

On the Max/Min value screen, pressing (RESET) for 2 seconds clears the maximum and minimum values of the displayed measuring item and turns to the present values.

In addition, pressing (RESET) and (+) simultaneously for 2 seconds on the screen clears all maximum and minimum values and turns to the present values.

When password protection is enabled, the maximum and minimum values are cleared after you enter the password. Communication function also enables to clear all maximum and minimum values. In this case, password input is not necessary.

## 5. Operation

### 5.1. Basic Operation

#### 5.1.8. Active Energy/Reactive Energy/Apparent Energy Display

##### ■ Display type

The following table shows the display type of active/reactive/apparent energy based on the full-load power.

$$\text{Full-load power [kW]} = \frac{\alpha \times (\text{VT primary voltage}) \times (\text{CT primary current})}{1000}$$

|   |              |                |
|---|--------------|----------------|
| } | $\alpha$ : 1 | 1-phase 2-wire |
|   | 2            | 1-phase 3-wire |
|   | $\sqrt{3}$   | 3-phase 3-wire |
|   | 3            | 3-phase 4-wire |

- \*1. For 3-phase 4-wire system, the VT primary voltage and direct voltage are calculated using phase voltage.
- \*2. For 1-phase 3-wire system, the VT primary voltage is calculated using phase voltage.
- \*3. For the direct voltage setting, direct voltage is used for calculation instead of VT primary voltage.
- \*4. For reactive energy and apparent energy, 'kW' in the above equation is read as 'kvar' and 'kVA' respectively.

| Full-load power [kW, kvar, kVA] | Display type    |  |
|---------------------------------|-----------------|--|
|                                 | Digital display | Unit   |
| Below 10                        | 888888          | kWh, kvarh, kVAh<br>*The unit can be changed to 'M or none.' |
| 10 or more and below 100        |                 |  |
| 100 or more and below 1000      |                 |  |
| 1000 or more and below 10000    |                 |  |
| 10000 or more and below 100000  |                 |  |
| 100000 or more                  |                 | MWh, Mvarh, MVAh<br>*The unit can be changed to 'k or none.' |

The measurement display blinks when active energy (imported) is measured. It goes off at no measuring point.

##### ■ Display examples

Active energy (imported)

Active energy (exported)\*1

Apparent energy

To display the screen of \*1, you must change the settings for active/reactive energy measurement in 3.6.

Reactive energy (imported lag)

Reactive energy (imported lead)\*1

Reactive energy (exported lag)\*1

Reactive energy (exported lead)\*1

#### 5.1.9. How to Change the Display Digit of Active/Reactive/Apparent Energy

By changing the unit (M, k, or none) of active/reactive/apparent energy or by displaying the lower enlarged view, you can check the upper or lower digit of a measured value.

Press (+) and (-) simultaneously for 2 seconds to switch.

Example of switching active energy (imported): 012,345,678,901,234.567Wh

Note1: Active, reactive, and apparent energy that are not displayed on the screen will be all changed to the same unit.

Note2: If the set value of VT primary voltage or that of CT primary current is large, the lower digit less than the measurement range will indicate '0.'

## 5. Operation

### 5.1. Basic Operation

#### 5.1.10. How to Reset Active/Reactive/Apparent Energy to Zero

When you press (SET), (RESET), and (PHASE) simultaneously for 2 seconds, active, reactive, and apparent energy values will be reset to zero.

When password protection is enabled, the values are reset after you enter the password.

In addition, communication function enables to reset all active, reactive, and apparent energy values to zero.

In this case, password input is not necessary.

Note1: This function is available on the present value screen only.

Note2: The values of active, reactive, and apparent energy that are not displayed on the screen will be also all reset to zero.

Note3: Periodic active energy can be separately reset to zero. Refer to 5.2.6.

#### 5.1.11. How to Measure Reactive Energy (2 quadrant/4 quadrant measurement )

For measurement of reactive energy, there are two types on how to take a quadrant as follows.

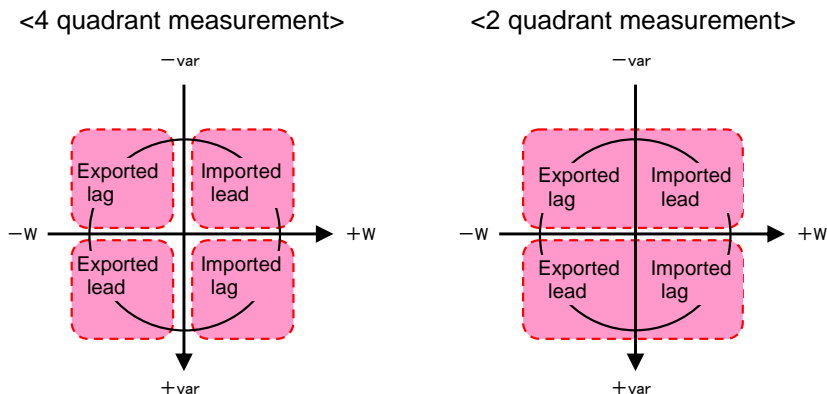

The measurement method of reactive energy can be switched at the active/reactive energy measurement settings in the setting menu 3.

In addition, when you set to IEC mode in the setting menu 8, 2 quadrant measurement is executed even if you set to 'Combination III' or 'Combination IV', which executes 4 quadrant measurement, at the active/reactive energy measurement settings.

When you select 4 quadrant measurement and IEC mode at each setting, 'Imported lag' and 'Exported lead' of reactive energy are displayed on the additional screen. However, they are not integrated.

For details on how to switch the 2 quadrant/4 quadrant measurement, refer to 3.6.

For details on how to switch the IEC mode setting, refer to 3.13.

| Measurement method     | Description   |
|------------------------|---|
| 4 quadrant measurement | Each of four quadrants (Imported lag, Imported lead, Exported lag, and Exported lead) is measured as one division. It is suitable to measure systems with a private power generator. However, a dead region occurs at the boundary of each division. Accordingly, reactive energy cannot be measured at where power factor is near 1 or zero.   |
| 2 quadrant measurement | 'Imported lag' and 'Exported lead' are measured as one division, and in the same way, 'Imported lead' and 'Exported lag' are measured as one division. Therefore, a dead region does not occur at where power factor is near zero and reactive energy can be measured even there. It is suitable to measure systems without a private power generator and reactive energy of capacitor load where power factor is zero generally. |

## 5. Operation

### 5.1. Basic Operation

#### 5.1.12. Each Measuring Item Display during Power Transmission

The following table shows symbol display ( $\pm$ ) for each measured value according to the power transmission state.

For details on how to switch the 2 quadrant/4 quadrant measurement, refer to **3.6**.

For details on how to switch IEC mode, refer to **3.13**.

| Measuring item                         |                                       | Power transmission state |               |              |               |          |
|--|---------------------------------------|--------------------------|---------------|--------------|---------------|----------|
|  |                                       | Imported lag             | Imported lead | Exported lag | Exported lead |          |
| A, DA, AN, DAN, V, Hz, VA, HI, HIN, HV |                                       | Unsigned                 |               |              |               |          |
| W                                      |                                       | Unsigned                 |               | '-' sign     |               |          |
| var                                    | Normal mode ( 2 quadrant measurement) | Unsigned                 | '-' sign      | '-' sign     | Unsigned      |          |
|  | Normal mode ( 4 quadrant measurement) | Unsigned                 | '-' sign      | Unsigned     | '-' sign      |          |
|  | IEC (V) mode                          | Unsigned                 | '-' sign      | '-' sign     | Unsigned      |          |
|  | Each phase                            | IEC (A) mode             | Unsigned      | '-' sign     | '-' sign      | Unsigned |
|  |                                       |                          | Unsigned      | Unsigned     | Unsigned      | Unsigned |
| Total                                  |                                       | Unsigned                 | Unsigned      | Unsigned     | Unsigned      |          |
| PF                                     | Normal mode ( 2 quadrant measurement) | Unsigned                 | '-' sign      | '-' sign     | Unsigned      |          |
|  | Normal mode ( 4 quadrant measurement) | Unsigned                 | '-' sign      | Unsigned     | '-' sign      |          |
|  | IEC (V) mode                          | Unsigned                 | '-' sign      | '-' sign     | Unsigned      |          |
|  | IIEC (A) mode                         | Unsigned                 | '-' sign      | '-' sign     | Unsigned      |          |

#### 5.1.13. Demand Time Period and Demand Value of Current demand

The demand time period ( $t_0$ ) represents a time period until a measured value ( $I_0$ ) displays 95% of the input ( $I$ ) when continuously energized by constant input ( $I$ ). To display 100% of the input ( $I$ ), approximately three times the time period ( $t_0$ ) is required.

The demand value represents a measured display value with the above feature on time period and it indicates the overall average value within the demand time period.

The demand value changes over a relatively long time period. Therefore, it is not affected by input change for a short time. Accordingly, it is suitable to monitor overload of transformer.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

The following shows how to use the instrument depending on the application.

#### 5.2.1. Upper/Lower Limit Alarm Display and Action

When the set upper/lower limit alarm value is exceeded, the display starts to blink and an alarm is output.

\*For details on how to set the upper/lower limit alarm, refer to 3.8.

##### ■ Action for alarm

Alarm generating: When the set alarm value is exceeded, the display blinks and alarm contact is closed.

\*Note

Alarm cancellation: When an alarm is cancelled, the display turns to the normal mode and alarm contact is open.

Note: When you set the alarm delay time, an alarm will generate if the set upper/lower limit alarm value is exceeded and this situation continues for the alarm delay time.

| Alarm reset method |        | Measured value > Upper limit alarm value<br>Measured value < Lower limit alarm value   | Measured value < Upper limit alarm value<br>Measured value > Lower limit alarm value   |
|--------------------|--------|--|--|
| Automatic (Auto)   | Screen | <p><b>ALARM</b> and <b>HI</b> or <b>LO</b> blink</p>                              | <p>Normal display</p>   |
| Manual (HoLd)      | Screen | <p><b>ALARM</b> and <b>HI</b> or <b>LO</b> blink</p>  <p>(Alarm generating)</p> | <p><b>ALARM</b> and <b>HI</b> or <b>LO</b> light up</p>  <p>(Alarm retention)</p> <p>RESET →</p> <p>Normal display</p>  <p>(Alarm cancellation)</p> |

Note1: If measuring items of alarm generating are displayed on the screen, the digital value, unit (A, V, W, var, PF, Hz, %, DM, and THD), and phase (1, 2, 3, and N) will be displayed according to the alarm status as the following table.

| Alarm status       | Digital value | Unit     | Phase    |
|--------------------|---------------|----------|----------|
| Alarm generating   | Blink*        | Blink    | Blink*   |
| Alarm retention    | Light up      | Blink    | Blink*   |
| Alarm cancellation | Light up      | Light up | Light up |

\*When the phase of no alarm is displayed on the screen, it does not blink.

Note2: When the backlight blinking for alarm is set to 'on', the backlight blinks at generating alarm.

Note3: On the Max/Min value screen, the present value, which is displayed at the middle line of digital display,

**ALARM** and **HI** or **LO** blink.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

■ Monitored phase of upper/lower limit alarm item

The phase for monitoring the upper/lower limit alarm varies depending on the measuring item.

For details, refer to the following table.

| Upper/Lower limit alarm item                   | Monitored phase   |                                 |                            |                            |
|--|-------------------|---------------------------------|----------------------------|----------------------------|
|  | 3-phase<br>4-wire | 3-phase<br>3-wire<br>(3CT, 2CT) | 1-phase<br>3-wire<br>(1N2) | 1-phase<br>3-wire<br>(1N3) |
| A upper limit, DA upper limit                  | 1, 2, 3           | 1, 2, 3                         | 1, N, 2                    | 1, N, 3                    |
| A lower limit, DA lower limit                  | 1, 2, 3           | 1, 2, 3                         | 1, 2                       | 1, 3                       |
| AN upper limit, DAN upper limit                | N                 | —                               | —                          | —                          |
| V (L-L) upper limit *Note1                     | 12, 23, 31        | 12, 23, 31                      | 1N, 2N, 12                 | 1N, 3N, 31                 |
| V (L-L) lower limit *Note1                     | 12, 23, 31        | 12, 23, 31                      | 1N, 2N, 12                 | 1N, 3N, 31                 |
| V (L-N) upper limit                            | 1N, 2N, 3N        | —                               | —                          | —                          |
| V (L-N) lower limit                            | 1N, 2N, 3N        | —                               | —                          | —                          |
| W upper limit, var upper limit, PF upper limit | Total             | Total                           | Total                      | Total                      |
| W lower limit, var lower limit, PF lower limit | Total             | Total                           | Total                      | Total                      |
| Hz upper limit                                 | 1N                | 12                              | 1N                         | 1N                         |
| Hz lower limit                                 | 1N                | 12                              | 1N                         | 1N                         |
| HI total RMS value upper limit                 | 1, 2, 3           | 1, 2, 3<br>*Note2               | 1, 2                       | 1, 3                       |
| HI <sub>N</sub> total RMS value upper limit    | N                 | —                               | —                          | —                          |
| THD <sub>v</sub> upper limit                   | 1N, 2N, 3N        | 12, 23                          | 1N, 2N                     | 1N, 3N                     |
| DW (Predict/Present/Last value) upper limit    | Total             | Total                           | Total                      | Total                      |
| Dvar (Predict/Present/Last value) upper limit  | Total             | Total                           | Total                      | Total                      |
| DVA (Predict/Present/Last value) upper limit   | Total             | Total                           | Total                      | Total                      |

Note1: For 12-phase or 31-phase of 1-phase 3-wire system, alarm monitoring is executed based on twice the set upper/lower limit alarm value.

Note2: Harmonic current 2-phase is measured for 3-phase 3-wire system (3CT) only.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.2. How to Cancel the Upper/Lower Limit Alarm

The alarm cancellation method differs depending on the alarm reset setting. In addition to the following methods, communication function is available to cancel the upper and lower limit alarm.

| Alarm reset method | How to cancel  |
|--------------------|--|
| Automatic (Auto)   | When a measured value is below the set upper/lower limit alarm value, the alarm is automatically reset.  |
| Manual (HoLd)      | <p>Even after a measured value is below the set upper/lower limit alarm value, the alarm is retained. After the measured value is below the alarm value, operate the following alarm reset.</p> <p>Note: On the Max/Min value screen and on the digital input screen, the alarm reset operation is not possible.</p> <p>&lt;To cancel the alarm of a selected item&gt;<br/>           Display the item of alarm generating and then press <b>RESET</b> to cancel the alarm.<br/>           ( For the item that has phases such as current or voltage, you must press <b>RESET</b> on each phase display to cancel the alarm. )</p> <p>&lt;To cancel alarms of all items&gt;<br/>           In the operating mode, press <b>RESET</b> for 2 seconds to cancel all alarms at once.<br/>           Note: When the backlight is blinking, first stop the blinking backlight and then execute the alarm cancellation operation.</p> |

Note: To prevent chattering, the determination whether a measured value is below the upper/lower limit alarm value is conducted out of dead region below the setting step of the alarm value.

#### 5.2.3. How to Stop Backlight Blinking Caused by the Upper/Lower Limit Alarm Generation

Press **RESET** to stop the backlight blinking.

#### 5.2.4. Upper/Lower Limit Alarm Item on the Alarm Contact

| Settings                  |                           | Alarm item for alarm output                          |  |
|---------------------------|---------------------------|--|--|
| Digital output function 1 | Digital output function 2 | C1A, C1B terminals                                   | C2A, C2B terminals                                   |
| Alarm output              | Alarm output              | Alarm item 1   | Alarm item 2 to 4 (output in a batch at one of them) |
| Alarm output              | Pulse output              | Alarm item 1 to 4 (output in a batch at one of them) | No alarm   |
| Pulse output              | Alarm output              | No alarm   | Alarm item 1 to 4 (output in a batch at one of them) |
| Pulse output              | Pulse output              | No alarm   | No alarm   |

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.5. Periodic Active Energy Display

Active energy can be measured by dividing into a maximum of three time periods.

Even when the periodic active energy display is set to 'oFF (Not display)', the periodic active energy is measured.

\*For details on the settings, refer to **3.13 Setting Menu 8: Special Settings (Settings for Operating Time, IEC Mode, and CO<sub>2</sub> equivalent)**.

The time period is switched by communication or by digital input (DI) according to the settings. It is not possible to switch it manually (by button operation).

##### (1) The two-time period control by communication control or with one contact

<For communication control>

- When the selection bit is ON (1), active energy (imported) is accumulated to periodic active energy n. (n=1, 2)
- When the selection bit is OFF (0), active energy (imported) is not accumulated to periodic active energy n. (n=1, 2)

<For digital input (DI) control>

- Without digital input (DI), active energy (imported) is accumulated to periodic active energy 1 and not accumulated to periodic active energy 2.
- With digital input (DI), active energy (imported) is not accumulated to periodic active energy 1 and accumulated to periodic active energy 2.

<The setting of no switching>

- Active energy (imported) is accumulated to periodic active energy 1 and periodic active energy 2. (No switching of time period)

Periodic active energy 1

Periodic active energy 2

##### (2) The three-time period control by communication control or with three contacts

<For communication control>

- When the selection bit is ON (1), active energy (imported) is accumulated to periodic active energy n. (n=1, 2, 3)
- When the selection bit is OFF (0), active energy (imported) is not accumulated to periodic active energy n. (n=1, 2, 3)

<For digital input (DI) control>

- With digital input (DI1), active energy (imported) is accumulated to periodic active energy 1 and not accumulated to periodic active energy 2 or periodic active energy 3.
- With digital input (DI2), active energy (imported) is accumulated to periodic active energy 2 and not accumulated to periodic active energy 1 or periodic active energy 3.
- With digital input (DI3), active energy (imported) is accumulated to periodic active energy 3 and not accumulated to periodic active energy 1 or periodic active energy 2.

When multiple digital inputs (DI) are activated, each periodic active energy is accumulated.

Example: When (DI1) and (DI3) of digital input are activated, active energy (imported) is accumulated to periodic active energy 1 and periodic active energy 3 and not accumulated to periodic active energy 2.

<The setting of no switching>

- Active energy (imported) is accumulated to periodic active energy 1, periodic active energy 2 and active energy 3. (No switching of time period)

Periodic active energy 1

Periodic active energy 2

Periodic active energy 3

In the operating mode, when you are switching the measurement screen with **DISPLAY**, the periodic active energy is displayed.

#### 5.2.6. How to Reset Periodic Active Energy to Zero

When you display either of the periodic active energy 1, 2, or 3 on the screen and then press **+** and **RESET** for 2 seconds, the periodic active energy displayed on the screen only is reset to zero.

When password protection is enabled, it is reset to zero after you enter the password.

In addition, communication function enables to reset the periodic active energy to zero separately or simultaneously. In this case, password input is not necessary.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.7. Rolling Demand Display and Calculation

Rolling demand is calculated by dividing the active/reactive/apparent energy during a specified period (interval) \*1 by the length of that period.

For block interval demand, you specify a period of time interval (or block) that this instrument uses for the demand calculation.

\*For details on the rolling demand display settings, refer to 3.12.

The following two types can be selected for rolling demand action according to the settings.

##### ① Rolling block

Select an interval and a subinterval from 1 to 60 minutes in 1-minute increments.

The interval must be divided into subintervals with equal length.

The rolling demand is updated at the end of each subinterval.

<Example of interval: 15 minutes, subinterval: 5 minutes>

Note: When the rolling demand time period adjustment is executed, the timing of time period begins with 0 minute.

##### ② Fixing block

Select an interval from 1 to 60 minutes in 1-minute increments.

The rolling demand is calculated and updated at the end of each interval.

To be fixing block, set the same time to both the interval and subinterval.

< Example of interval: 15 minutes, subinterval: 15 minutes >

Note: When the rolling demand time period adjustment is executed, the timing of time period begins with 0 minute.

In the operating mode, when you are switching the measurement screen with **DISPLAY**, the rolling demand is displayed.

\*1: The following table shows the accumulated values used for rolling demand calculation.

| Item                                 | IEC mode setting   |   | Note                           |
|--------------------------------------|--|---|--------------------------------|
|                                      | Normal mode  | IEC mode  |                                |
| Rolling demand active power (DW)     | Active energy (Imported)   | Active energy (Imported) - Active energy (Exported)   |                                |
| Rolling demand reactive power (Dvar) | Reactive energy (Imported lag) + Reactive energy (Exported lead) | [Reactive energy (Imported lag) + Reactive energy (Exported lead)] - [Reactive energy (Exported lag) + Reactive energy (Imported lead)] | Refer to the following diagram |
| Rolling demand apparent power (DVA)  | Apparent energy  |   |                                |

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.8. Rolling Demand Predict Value

The rolling demand provides present, last, predict, and peak demand values.

The predicted demand value is calculated for the end of the present interval for each rolling demand, taking into account the energy consumption so far within the present (partial) interval and the present rate of consumption. The following illustration shows how a change in load can affect the predicted demand value for the interval. In this example, the interval is set to 15 minutes.

| Item | Explanation  |
|------|--|
| ①    | End of the last completed demand interval/ Beginning of the present interval   |
| ②    | Partial interval   |
| ③    | Change in load   |
| ④    | Predicted demand value if load is added during interval; predicted demand value increases to reflect increased demand. |
| ⑤    | Predicted demand value if no load is added   |

#### 5.2.9. Rolling Demand Time Period Adjustment

When the rolling demand is displayed on the screen, pressing (+) and (-) simultaneously for two seconds or more enables the rolling demand time period adjustment.

\*Even when the time period adjustment is set to digital input, it is available with manual operation (button operation).

When password protection is enabled, it is available after you enter the password.

Although there is no item of the time period adjustment setting, communication function enables the rolling demand time period adjustment. In this case, password input is not necessary.

■ Select 'Execute' or 'Not execute' for the time period adjustment.

no ←→ yES  
(Not execute) (Execute)

#### 5.2.10. How to Clear the Rolling Demand Peak Value

When the rolling demand is displayed on the screen, press (+) and (RESET) simultaneously for two seconds to clear the rolling demand peak value.

When password protection is enabled, it is cleared after you enter the password.

Communication function also enables to clear it. In this case, password input is not necessary.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.11. Operating Time Display

According to the value set to the operating time count target (AUX, A, or V), measuring time is counted and displayed as operating time of load. To display it, you must set the operating time display.

Even when the operating time display is set to 'oFF (Not display)', operating time is counted.

\*For details on the settings, refer to **3.13 Setting Menu 8: Special Settings (Settings for Operating Time, IEC Mode, and CO<sub>2</sub> equivalent)**.

When the threshold of the set operating time count target is exceeded, operating time 1 and 2 are counted.

| Item                  | 3-phase 4-wire         | 1-phase 2-wire | Others                 |
|-----------------------|------------------------|----------------|------------------------|
| AUX (Auxiliary power) | AUX                    | AUX            | AUX                    |
| A (Current)           | A <sub>AVG</sub>       | A              | A <sub>AVG</sub>       |
| V (Voltage)           | V <sub>AVG</sub> (L-N) | V              | V <sub>AVG</sub> (L-L) |

In the operating mode, when you are switching the measurement screen with **DISPLAY**, operating time is displayed.

#### 5.2.12. How to Reset Operating Time to Zero

When operating time 1 or operating time 2 is displayed on the screen, press **RESET** for 2 seconds to reset the operating time to zero.

\*The operating time displayed on the screen only is reset to zero.

When password protection is enabled, it is reset to zero after you enter the password.

In addition, communication function enables to reset all operating times to zero. In this case, password input is not necessary.

#### 5.2.13. CO<sub>2</sub> Equivalent Display

The CO<sub>2</sub> emissions that are converted from imported active energy can be displayed. To display them, you must set the CO<sub>2</sub> equivalent display. For the display settings, refer to **3.13 Setting Menu 8: Special Settings (Settings for Operating Time, IEC Mode, and CO<sub>2</sub> equivalent)**.

The display format for CO<sub>2</sub> equivalent varies depending on the full-load power as the following table.

| Full-load power [kW] |              | Display format       |         |    |
|----------------------|--------------|----------------------|---------|----|
|                      |              | Digital display      | Unit    |    |
| Below 10             |              | 3 <sup>rd</sup> line | -       | kg |
|                      |              | 4 <sup>th</sup> line | 8888.88 |    |
| 10 or more           | Below 100    | 3 <sup>rd</sup> line | -       | kg |
|                      |              | 4 <sup>th</sup> line | 88888.8 |    |
| 100 or more          | Below 1000   | 3 <sup>rd</sup> line | -       | kg |
|                      |              | 4 <sup>th</sup> line | 888888  |    |
| 1000 or more         | Below 10000  | 3 <sup>rd</sup> line | 888     | kg |
|                      |              | 4 <sup>th</sup> line | 8888.88 |    |
| 10000 or more        | Below 100000 | 3 <sup>rd</sup> line | 888     | kg |
|                      |              | 4 <sup>th</sup> line | 88888.8 |    |
| 10000 or more        |              | 3 <sup>rd</sup> line | 888     | kg |
|                      |              | 4 <sup>th</sup> line | 888888  |    |

Note: The CO<sub>2</sub> equivalent is calculated based on the following calculating formula:

$$[\text{CO}_2 \text{ equivalent} = \text{Active energy (imported)} \times \text{CO}_2 \text{ conversion rate setup value}]$$

It is not an integrated value. If the CO<sub>2</sub> conversion rate setting is changed, the value of CO<sub>2</sub> emissions will be changed.

On the present value display, when you are switching the measurement screen with **DISPLAY**, the CO<sub>2</sub> equivalent is displayed.

#### 5.2.14. How to Clear the CO<sub>2</sub> Equivalent

When the CO<sub>2</sub> equivalent is displayed on the screen, press **+** and **RESET** for two seconds to clear the CO<sub>2</sub> equivalent.

When password protection is enabled, it is reset to zero after you enter the password.

Communication function also enables to clear it separately or simultaneously. In this case, password input is not necessary.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.15. Digital Input/Output Status Display and Action

The contact status can be displayed by signal inputs such as the opening/closing signal of breaker or the alarm signal of overcurrent relay to the digital input (DI) terminal.

For the digital output (DO) terminal, the contact is open/closed by communication control.

To display the digital input/output status, the setting is necessary.

\*For details on the setting, refer to 3.12.

#### ■ Display examples

<When ME-0052-SS96 (optional plug-in module) is installed>

In the operating mode, when you are switching the measurement screen with **DISPLAY**, the digital input/output status is displayed.

#### ■ Digital input reset method

The method how to retain the digital input status varies depending on the digital input reset method.

| Reset method     | How to cancel   |
|------------------|---|
| Automatic (Auto) | If the digital input becomes OFF (open), the digital input status will automatically become OFF (open).   |
| Latch (HoLd)     | Once the digital input detects ON (closed), even if it becomes OFF (open), the digital input status remains as ON (closed) until the latch is cancelled.<br>(For example, When an alarm contact such as ACB is input, even if an alarm stops, the instrument retains the alarm state. Therefore, you will not overlook alarm generating.) |

#### ■ Digital input conditions

The following table shows the digital input conditions.

| Input conditions                 | DI terminal                                |
|----------------------------------|--|
| Switch rating (Contact capacity) | 24 V DC (19 V DC to 30 V DC), 7 mA or less |
| ON (closed)/OFF (open) time      | Both of ON and OFF: 30 ms or more          |

#### 5.2.16. How to Cancel the Latch for Digital Input

On the digital input (DI) display screen, pressing **RESET** for two seconds enables to cancel the latch for digital input (DI) in a batch.

Communication function also enables the cancellation.

#### 5.2.17. How to Prevent Maximum Value Update by Motor Starting Current

For motor current monitoring, using the motor starting current delay function prevents the maximum value update of current, active power, reactive power, apparent power, power factor, and current unbalance rate and the alarm generating that are caused by motor starting current. To use the motor starting current delay function, you must set it. For details on the settings, refer to 3.8.

#### ■ The action with motor starting current delay function

Note1: For the motor starting current threshold, set a value lower than the lower limit value, considering a change in load current during operation.

Note2: When input current is below the motor starting current threshold, the minimum value update stops.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.18. Password Protection Setting

In the operating mode, when you press **RESET** and **PHASE** simultaneously for 2 seconds or more and then enter the password, the password protection can be set.

The password of the factory default is '0000.' If you enter the wrong password, the screen will return to the password input display, where the highest digit blinks.

To switch the screen from the password input display to the operating mode, press **DISPLAY** at the highest digit in password input.

When password protection is enabled, you must input the password when executing the following item such as setting mode switching or Max/Min value reset.

| ■ Password input   |   | ■ Password protected item |                                      |
|--|---|---------------------------|--------------------------------------|
| Password input screen<br> | <ul style="list-style-type: none"> <li>• Set the number of the blinking digit from the highest digit by pressing <b>+</b> or <b>-</b>.</li> <li>• Press <b>SET</b> to move the setting digit, blinking one, to a lower digit.</li> <li>• Press <b>DISPLAY</b> to move the setting digit, blinking one, to an upper digit.</li> <li>• Press <b>SET</b> at the lowest digit to enable the items in the right table.</li> <li>• If you enter the wrong password, the screen will return to the display where the highest digit is blinking.</li> </ul> | No.                       | Item                                 |
|  |   | 1                         | Enter the setting mode               |
|  |   | 2                         | Clear maximum and minimum values     |
|  |   | 3                         | Reset Wh, var, etc. to zero          |
|  |   | 4                         | Reset periodic active energy to zero |
|  |   | 5                         | Adjust rolling demand time period    |
|  |   | 6                         | Clear rolling demand peak value      |
|  |   | 7                         | Reset operating time to zero         |

|   |  |
|---|--|
| <b>■ Password protection setting</b><br>(1) Set the password protection.<br>off ←→ on<br>(Note protected) (Protected)<br><br>(2) Change the password.<br>no ←→ yES<br>(Not change) (Change)<br><br>Note1: When you select "no", the screen returns to the operating mode.<br>Note2: When you select "yES", the password appears.<br><br>(3) Input a new password.<br>• Set the number of the blinking digit from the highest digit by pressing <b>+</b> or <b>-</b> .<br>• Press <b>SET</b> to move the setting digit, blinking one, to a lower digit.<br>• Press <b>DISPLAY</b> to move the setting digit, blinking one, to a higher digit.<br>• Press <b>SET</b> at the lowest digit to determine the password change.<br>• The setting ranges from 0000 to 9999. |   |
|   |  |
|   |  |

#### Important

If you forgot your password, you could not unlock the password by yourself in the field. Please contact your supplier.

## 5. Operation

### 5.2. Usage Depending on the Application (Alarm, Periodic Active Energy, Rolling Demand, Operating Time, Password, etc.)

#### 5.2.19. Built-in Logging Function

This built-in logging function stores measured data as logging data in the internal non-volatile memory. The data to be stored as events occurred in this instrument are alarm data, the recorded time of the Max/Min value, and system log data. The stored data can be read from MODBUS RTU communication. To use this function, MODBUS RTU communication is required. It is not available with MODBUS TCP communication.

#### ■ Built-in logging data type

The following table shows the logging data type used in this built-in logging function.

| Type                                   | Details   |  |   |                                |  |
|--|---|--|---|--------------------------------|--|
| Measurement data                       | The measurement and time data are stored at the logging period you set.   |  |   |                                |  |
|  | <table border="1"> <tr> <td>The number of logging items</td> <td> <ul style="list-style-type: none"> <li>•Accumulated value data: 5 items</li> <li>•Data other than accumulated value: 15 items</li> </ul>                     Total: Max. 20 items                 </td> </tr> <tr> <td>Internal memory logging period</td> <td> <ul style="list-style-type: none"> <li>•30 days (logging period: 15 minutes)</li> <li>•60 days (logging period: 30 minutes)</li> <li>•120 days (logging period: 60 minutes)</li> </ul> </td> </tr> </table> | The number of logging items  | <ul style="list-style-type: none"> <li>•Accumulated value data: 5 items</li> <li>•Data other than accumulated value: 15 items</li> </ul> Total: Max. 20 items | Internal memory logging period | <ul style="list-style-type: none"> <li>•30 days (logging period: 15 minutes)</li> <li>•60 days (logging period: 30 minutes)</li> <li>•120 days (logging period: 60 minutes)</li> </ul> |
|  | The number of logging items   | <ul style="list-style-type: none"> <li>•Accumulated value data: 5 items</li> <li>•Data other than accumulated value: 15 items</li> </ul> Total: Max. 20 items                          |   |                                |  |
|  | Internal memory logging period  | <ul style="list-style-type: none"> <li>•30 days (logging period: 15 minutes)</li> <li>•60 days (logging period: 30 minutes)</li> <li>•120 days (logging period: 60 minutes)</li> </ul> |   |                                |  |
|  | The storing timing is as follows:   |  |   |                                |  |
| Logging period                         | Storing timing  |  |   |                                |  |
| 15 min                                 | 00/15/30/45 minutes past every hour   |  |   |                                |  |
| 30 min                                 | 00/30 minutes past every hour   |  |   |                                |  |
| 60 min                                 | Every hour on the hour  |  |   |                                |  |
| Alarm data                             | For each alarm item set at the upper/lower limit alarm item 1 to 4, the alarm item and its time data are stored when each event of alarm generating/cancellation or waiting for alarm cancellation occurs.<br>Max. 100 records  |  |   |                                |  |
| The recorded time of the Max/Min value | The time data of when the Max or Min value is updated is stored.<br>1 record for each item  |  |   |                                |  |
| System log data                        | The time data of when an event such as setting change occurs is stored.<br>Max. 100 records   |  |   |                                |  |

Note: The measurement data for logging has been grouped as LP01 and LP02 at this instrument side. Selecting the group determines the logging items. If you want to set a pattern other than LP01 or LP02, LP00 is available for selecting any logging items to set up.

#### ■ Before using the built-in logging function

The present time and built-in logging settings are required beforehand.

For the present time setting and built-in logging setting, refer to **3.14** and **3.9** respectively.

#### ■ How to read the built-in logging data

The built-in logging data is read from MODBUS RTU communication.

For the method, refer to Electronic Multi-Measuring Instrument ME Series MODBUS Interface specifications (Ref. No. LSPM-0075)

|  |  |
|--|--|
|  <b>Caution</b> | <p>If the following settings are changed, the measurement data for built-in logging will be deleted. Before the change, output the logging data, check that the data is correctly stored, and execute the setting change.</p> <ul style="list-style-type: none"> <li>•Setting change of phase wire system</li> <li>•Built-in logging data clear</li> <li>•Logging item change in LP00 of the built-in logging item pattern</li> <li>•Setting change of the present time over the logging period</li> </ul> <p>When the present time is changed over the storing timing, a processing is executed to complement the measurement data of the corresponding time. Therefore, it is recommended to avoid the storing timing when the present time is changed. If the measurement data for built-in logging is monitored during the complemented processing, the data will be 0. After a while, execute it again.</p> |
|--|--|

## 6. Others

### 6.1. Display Pattern List

When you set the display pattern in the setting menu 1 and the additional screens in the setting menu 3, 7, and 8, the screen is switched from No.1 in the following table in ascending order by pressing DISPLAY

[When set to 3-phase 4-wire system]

| Display pattern | Screen set by display pattern |             |             |             |             |      |      |      |      |       |     |
|-----------------|-------------------------------|-------------|-------------|-------------|-------------|------|------|------|------|-------|-----|
|                 | No.1                          | No.2        | No.3        | No.4        | No.5        | No.6 | No.7 | No.8 | No.9 | No.10 |     |

Note 2: When you add an additional screen, the screen number is added.

Note 3: In the table, 'Wh' and 'varh' indicate active energy (imported) and reactive energy (imported lag) respectively.

Note 4: The additional screens of Wh, varh, and VAh of P00 are displayed by setting each item as display element.

## 6. Others

### 6.1. Display Pattern List

[When set to other than 3-phase 4-wire system]

| Display pattern |     | Screen set by display pattern |             |             |             |      |      |
|-----------------|-----|-------------------------------|-------------|-------------|-------------|------|------|
|                 |     | No.1                          | No.2        | No.3        | No.4        | No.5 | No.6 |
| P01             | 1st | A                             | A           | A           | W           | A    |      |
|                 | 2nd | V                             | V           | V           | var         | DA   |      |
|                 | 3rd | W                             | var         | VA          | PF          | Hz   |      |
|                 | 4th | Wh                            | varh        | VAh         | Wh          | Wh   |      |
| P02             | 1st | A1                            | DA1         | V12         | W           | A    | A    |
|                 | 2nd | A2                            | DA2         | V23         | var         | Hz   | V    |
|                 | 3rd | A3                            | DA3         | V31         | PF          | var  | VA   |
|                 | 4th | Aavg                          | DAavg       | Vavg        | Wh          | varh | VAh  |
| P00             | 1st | Arbitrary 1                   | Arbitrary 1 | Arbitrary 1 | Arbitrary 1 |      |      |
|                 | 2nd | Arbitrary 1                   | Arbitrary 1 | Arbitrary 1 | Arbitrary 1 |      |      |
|                 | 3rd | Arbitrary 1                   | Arbitrary 1 | Arbitrary 1 | Arbitrary 1 |      |      |
|                 | 4th | Arbitrary 2                   | Arbitrary 2 | Arbitrary 2 | Arbitrary 2 |      |      |

Note1: For 1-phase 2-wire system, the display pattern of P02 is not selectable.

Note2: For arbitrary 1, the selectable items are A, DA, V, W, var, VA, PF, and Hz.

For arbitrary 2, Wh, -Wh, varh, and VAh are selectable.

Note3: The phase shown in the display pattern of P02 is displayed on the screen according to the phase wire system setting as the following table.

| Phase wire system<br>Phase display |    | 1-phase 3-wire (1N2) |   |   | 1-phase 3-wire (1N3) |    |    | 3-phase 3-wire |    |    |
|------------------------------------|----|----------------------|---|---|----------------------|----|----|----------------|----|----|
|                                    |    | 1                    | 2 | 3 | 1N                   | 2N | 3N | 12             | 23 | 31 |
| Current                            | 1  | 1                    |   |   | 1                    |    |    | 1              |    |    |
|                                    | 2  | N                    |   |   | N                    |    |    | 2              |    |    |

## 6. Others

### 6.1. Display Pattern List

Note4: When you add an additional screen, the screen number is added.

Note5: In the table, 'Wh' and 'varh' indicate active energy (imported) and reactive energy (imported lag) respectively.

Note6: The additional screens of Wh, varh, and VAh of P00 are displayed by setting each item as display element.

Note7: The display of additional screens of No.20 and 21 in the above table varies depending on the setting of the phase wire system as the following table.

| Phase display    |               | Phase wire system | 1-phase 2-wire | 1-phase 3-wire | 3-phase 3-wire _2CT | 3-phase 3-wire _3CT |
|------------------|---------------|-------------------|----------------|----------------|---------------------|---------------------|
| Harmonic current | 1-phase value |                   | ○              | ○              | ○                   | ○                   |
|                  | 2-phase value |                   | —              | —              | —                   | ○                   |
|                  | 3-phase value |                   | —              | ○              | ○                   | ○                   |
| Harmonic voltage | 1-phase value |                   | ○              | ○              | ○                   | ○                   |
|                  | 3-phase value |                   | —              | ○              | ○                   | ○                   |

## 6. Others

### 6.2. Standard Value

The standard value is calculated according to the measuring item as the following table.

#### ■ Standard value for each measuring item

| Measuring element                                    |  | Standard value *Note2   |   |             |
|--|--|---|---|-------------|
| Current, Current demand                              |  | CT primary current setup value                                  |   |             |
| Voltage  | With VT  | 1-phase 2-wire,<br>3-phase 3-wire                               | VT primary voltage $\times 150/110$   |             |
|  |  | 3-phase 4-wire  | VT primary voltage (Phase) $\times 150/110$<br>VT primary voltage (Line) $\times \sqrt{3} \times 150/110$ |             |
|  | Direct input                                     | 1-phase 2-wire,<br>3-phase 3-wire                               | 110 V   | 150 V       |
|  |  |   | 220 V   | 300 V       |
|  |  |   | 440 V   | 600 V       |
|  |  | 1-phase 3-wire<br>(Phase voltage/<br>Line voltage)              | 110/220 V   | 150 V/300 V |
|  |  |   | 220/440 V   | 300 V/600 V |
|  |  |   | 3-phase 4-wire<br>(Phase voltage/<br>Line voltage)  | 63.5/110 V  |
|  | 100/173 V<br>110/190 V                           | 150/300 V   |   |             |
|  | 220/380 V<br>230/400 V<br>240/415 V<br>254/440 V | 300/600 V   |   |             |
| 277/480 V  | 400/640 V  |   |   |             |
| Active power, Rolling demand active power *Note1     |  | VT ratio $\times$ CT ratio $\times$ Intrinsic power (100%) kW   |   |             |
| Reactive power, Rolling demand reactive power *Note1 |  | VT ratio $\times$ CT ratio $\times$ Intrinsic power (100%) kvar |   |             |
| Apparent power, Rolling demand apparent power *Note1 |  | VT ratio $\times$ CT ratio $\times$ Intrinsic power (100%) kVA  |   |             |

Note1: For the setting of 'Without VT (Direct measurement input)', the VT ratio is 1. For intrinsic power, refer to the right table.

Note2: The calculated value is round to the nearest number as the table in the next page.

#### ■ Intrinsic power value

| Phase wire system | CT secondary current       | Rated voltage                  |  | Intrinsic power value (100%) |
|-------------------|----------------------------|--------------------------------|--|------------------------------|
| 1-phase 2-wire    | 5 A                        | Direct input<br>(Line voltage) | 110 V  | 0.5 kW                       |
|                   |                            |                                | 220 V  | 1.0 kW                       |
|                   |                            | 440 V                          | 2.0 kW   |                              |
|                   | 1 A                        | With VT<br>(Line voltage)      | 100 V, 110 V                                     | 0.5 kW                       |
|                   |                            |                                | 220 V  | 1.0 kW                       |
|                   |                            | Direct input<br>(Line voltage) | 110 V  | 0.1 kW                       |

|                   |                            | 100 V, 110 V,<br>115 V, 120 V  | 0.4 kW   |                              |

Note: For reactive power and apparent power, read 'kW' in the above table as 'kvar' and 'kVA' respectively.

## 6. Others

### 6.2. Standard Value

■ Standard value for current/current demand and STEP

Setting range: -10STEP to +3STEP

<Example> When the standard value is 100 A (0STEP), the range is 45 A (-10STEP) to 160 A (+3STEP).

Current standard value (1/3)

| STEP | Unit: A |
|------|---------|
| 1    | 1 A     |
| 2    | 1.2 A   |
| 3    | 1.5 A   |
| 4    | 1.6 A   |
| 5    | 1.8 A   |
| 6    | 2 A     |
| 7    | 2.2 A   |
| 8    | 2.4 A   |
| 9    | 2.5 A   |
| 10   | 3 A     |
| 11   | 3.2 A   |
| 12   | 3.6 A   |
| 13   | 4 A     |
| 14   | 4.5 A   |
| 15   | 4.8 A   |
| 16   | 5 A     |
| 17   | 6 A     |
| 18   | 6.4 A   |
| 19   | 7.2 A   |
| 20   | 7.5 A   |
| 21   | 8 A     |
| 22   | 9 A     |
| 23   | 9.6 A   |
| 24   | 10 A    |
| 25   | 12 A    |

| 120  | 2200 kV  |

## 6. Others

### 6.2. Standard Value

■ Standard value for active/reactive/apparent power and STEP

Setting range: -18STEP to +3STEP

<Example> When the standard value is 1000 W (0STEP), the range is 200 W (-18STEP) to 1600 W (+3STEP).

Active power standard value (1/5)

| STEP | Unit: W |
|------|---------|
| 1    | 8 W     |
| 2    | 9 W     |
| 3    | 9.6 W   |
| 4    | 10 W    |
| 5    | 12 W    |
| 6    | 15 W    |
| 7    | 16 W    |
| 8    | 18 W    |
| 9    | 20 W    |
| 10   | 22 W    |
| 11   | 24 W    |
| 12   | 25 W    |
| 13   | 30 W    |
| 14   | 32 W    |
| 15   | 36 W    |
| 16   | 40 W    |
| 17   | 45 W    |
| 18   | 48 W    |
| 19   | 50 W    |
| 20   | 60 W    |
| 21   | 64 W    |
| 22   | 72 W    |
| 23   | 75 W    |
| 24   | 80 W    |
| 25   | 90 W    |
| 26   | 96 W    |
| 27   | 100 W   |
| 28   | 120 W   |
| 29   | 150 W   |
| 30   | 160 W   |
| 31   | 180 W   |
| 32   | 200 W   |
| 33   | 220 W   |
| 34   | 240 W   |
| 35   | 250 W   |
| 36   | 300 W   |
| 37   | 320 W   |
| 38   | 360 W   |
| 39   | 400 W   |
| 40   | 450 W   |
| 41   | 480 W   |
| 42   | 500 W   |
| 43   | 600 W   |
| 44   | 640 W   |
| 45   | 720 W   |
| 46   | 750 W   |
| 47   | 800 W   |
| 48   | 900 W   |
| 49   | 960 W   |
| 50   | 1000 W  |

Active power standard value (2/5)

| STEP | Unit: W | Unit: kW |
|------|---------|----------|
| 51   | 1200 W  |          |
| 52   | 1500 W  |          |
| 53   | 1600 W  |          |
| 54   | 1800 W  |          |
| 55   | 2000 W  |          |
| 56   | 2200 W  |          |
| 57   | 2400 W  |          |
| 58   | 2500 W  |          |
| 59   | 3000 W  |          |
| 60   | 3200 W  |          |
| 61   | 3600 W  |          |
| 62   | 4000 W  |          |
| 63   | 4500 W  |          |
| 64   | 4800 W  |          |
| 65   | 5000 W  |          |
| 66   | 6000 W  |          |
| 67   | 6400 W  |          |
| 68   | 7200 W  |          |
| 69   | 7500 W  |          |
| 70   | 8000 W  |          |
| 71   |         | 9 kW     |
| 72   |         | 9.6 kW   |

### 6.3. Measuring Items and the Corresponding Display/Output

Note1: Each harmonic degree represents the odd degrees of the 1st to 31st RMS value and the 3rd to 31st content rate.

Note2: The imported lag and imported lead include the exported lead and exported lag respectively.

Note3: For the measuring items monitored by communication function, refer to the specifications of each communication function.

Note4: Phase angle can be measured only with the support function for determining incorrect wiring.

Note5: For 1-phase 3-wire system, the phases of measuring items are read as the following table.

| Phase wire system    | 1-phase | 2-phase | 3-phase | 12-phase | 23-phase | 31-phase |
|----------------------|---------|---------|---------|----------|----------|----------|
| 1-phase 3-wire (1N2) | 1-phase | N-phase | 2-phase | 1N-phase | 2N-phase | 12-phase |
| 1-phase 3-wire (1N3) | 1-phase | N-phase | 3-phase | 1N-phase | 3N-phase | 13-phase |

| Situation   | Measurement                                  | Display                     | Analog output  | Alarm contact  | Pulse output                                 |
|---|--|-----------------------------|--|--|--|
| For a few seconds just after turning on the auxiliary power<br>*The backlight lights up and the LCD is off. | Not measure                                  | Not display                 | There may be approximately 100% or more output until the internal voltage is stable. | Open   | Not output                                   |
| In the setting mode/<br>In the setting confirmation mode/<br>In the password protection screen              | The action is the same in the operating mode | Not display measured values | The action is the same in the operating mode   | The state before entering the setting mode or setting confirmation mode is retained. | The action is the same in the operating mode |
| Under power outage  | Not measure                                  | Not display                 | Not output   | Open   | Not output                                   |

#### ■ The instrument operation under measurement input

| Measuring element   | Instrument action  |  |
|---|--|--|
| Current (A)<br>Current demand (DA)                              | The CT secondary current setting is 5 A:<br>When input current is below 0.005 A (0.1%), 0 A is displayed.  | When the upper limit of display range (9999) is exceeded, the upper limit (9999) is displayed.   |
|   | The CT secondary current setting is 1 A:<br>When input current is below 0.005 A (0.5%), 0 A is displayed.  |  |
| Voltage (V)   | When input voltage (Line voltage) is below 11 V, 0 V is displayed.<br>•In 1-phase 3-wire system, when the voltage between P1 and P3 is below 22 V, 0 V is displayed.<br>•In 3-phase 4-wire system, when phase voltage is below 11 V or line voltage is below 19 V, 0 V is displayed. | When the upper limit of display range (9999) is exceeded, the upper limit (9999) is displayed.   |
| Active power (W)<br>Reactive power (var)<br>Apparent power (VA) | •When each of three phases of current is 0 A or when each of three phases of voltage is 0 V, 0 W, 0 var, and 0 VA are displayed.<br>•When current N-phase is 0 A or when voltage N-phase is 0 V, 0 W, 0 var, and 0 VA are displayed for each N-phase.                                | When the upper limit of display range (9999) is exceeded, the upper limit (9999) is displayed.   |
| Power factor (PF)   | •When each of three phases of current is 0 A or when each of three phases of voltage is 0 V, 1.0 is displayed.<br>•When current N-phase is 0 A or when voltage N-phase is 0 V, 1.0 is displayed for each N-phase.  |  |
| Frequency (Hz)  | •When voltage 1-phase is low voltage, - - - - is displayed.<br>Apply a voltage above approximately 22 V.   | When frequency is below 44.5 Hz and above 99.5 Hz, - - - - is displayed.   |
| Harmonic current  | For RMS value measurement:<br>•When current is 0 A, 0 A is displayed. (for each phase)<br>•When voltage 1-phase is 0 V or when frequency is below 44.5 Hz, - - - - is displayed for every phase.   | For distortion ratio (content ratio) measurement:<br>•When harmonic current 1 <sup>st</sup> is 0 A, 0 A is displayed. (for each phase)<br>•When voltage 1-phase is 0 V or when frequency is below 44.5 Hz, - - - - is displayed for every phase. |
| Harmonic voltage  | For RMS value measurement:<br>•When voltage is 0 V, 0 V is displayed. (for each phase)<br>•When voltage 1-phase is 0 V or when frequency is below 44.5 Hz, - - - - is displayed for every phase.   | For distortion ratio (content ratio) measurement:<br>•When voltage is 0 V, - - - - is displayed. (for each phase)<br>•When voltage 1-phase is 0 V or when frequency is below 44.5 Hz, - - - - is displayed for every phase.                      |
| Operating Time  | When the time is over 999999-hour, it is fixed at 999999-hour.   |  |

Note1: Current/voltage/active power input represents input to the instrument. It does not input to the primary side of VT/CT.

Note2: The expression of 'When current is 0 A' includes the case when the measured value described in the item of Current (A) is 0 A.

Note3: The expression of 'When voltage is 0 V' includes the case when the measured value described in the item of Voltage (V) is 0 V.

Note4: Use the instrument within the rating of the instrument.

#### ■ Analog output action

| Output setting          | Output range        |
|-------------------------|---------------------|
| Output limit is set     | -1% to 101% of span |
| Output limit is not set | -5% to 105% of span |

## 6. Others

### 6.5. Troubleshooting

If you observe abnormal sound, odor, smoke, or heat generation from the instrument, turn off the power at once. In addition, if you are considering sending the instrument in for repair, check the following points before it.

|                   | Situation   | Possible cause   | Solution  |
|-------------------|---|--|---|
| Display           | The display does not light up.  | Auxiliary power is not applied to MA and MB terminals.   | Apply auxiliary power supply.   |
|                   | When the auxiliary power is applied, the display does not light up for a short time.  | This is not an error. For a few seconds after charging the auxiliary power, the internal circuit is being initialized.   | Use it as it is.  |
|                   | The backlight does not light up.  | The backlight may be set to auto off (Auto).<br>*When it lights up by pressing any operation button, it is set to auto off.  | When it is set to auto off, it automatically goes off in 5 minutes. Use it as it is or change the setting to ON (Hold).<br>For details, refer to 3.7. |
|                   | The display becomes black.  | It may become black due to static electricity.   | It will go off after a while.   |
|                   | The 'End' display remains.  | It is in the setting mode.   | Press the <b>SET</b> button.  |
| Measurement error | The current and voltage errors are large.   | The settings for VT/Direct voltage and CT primary current may be incorrect.  | Check the settings for VT/Direct voltage and CT primary current.  |
|                   | The current and voltage are correct, but the active power and power factor errors are large.  | The wiring for VT/CT and this instrument may be incorrect.   | Check the wiring for VT/CT and this instrument.   |
|                   | The power factor error is large.  | If input current is smaller than the rating, the error will become large. (approximately 5% or less of the rated current)  | This is not an error. Use it as it is, or if the error is troublesome, change the CT according to the actual current.                                 |
|                   | The displayed active power is different from that calculated by multiplying the displayed current, voltage, and power factor.   | If the current and voltage AC waveforms distort due to harmonics, the value will not be the same as the calculated value. (For current waveforms without harmonics, the calculated value matches with the displayed value.)      | Use the instrument as it is.  |
|                   | The total RMS value of harmonic current is quite different from the current value.  | The distortion ratio (content rate) is well over 100%. (For measurement of inverter secondary side output)   | Check the measured item.  |
|                   | The current value measured by this instrument is different from that measured by other measuring instrument, such as a clamp meter. The difference exceeds an acceptable level. | If the comparative measuring instrument uses the average value method, the AC waveform will distort due to harmonics and the error of the comparative instrument will become large. (This instrument uses the RMS value method.) | Compare with a current value of a measuring instrument that uses the RMS value method.  |
|                   | The analog output error is large.   | When the wiring with the receiver side is long, the error may become large.  | Execute zero/span adjustment for analog output. Refer to 4.3 Test Menu 3: Zero/Span Adjustment for Analog Output.                                     |
|                   | The pulse output error is large.  | When the pulse width is set to 0.500 s or 1.000 s, if the pulse unit is set to the minimum value, the pulse output cannot track under large load conditions and it can result in a decrease in the pulse output number.          | Review the settings for pulse unit and width.   |
|                   | On the Max/Min value screen, a present value is displayed beyond the range of maximum and minimum values.   | During the starting current delay time, the maximum value is not updated. Therefore, the displayed present value may exceed the maximum value.   | Use the instrument as it is.  |

## 6. Others

### 6.5. Troubleshooting

|                       | Situation  | Possible cause   | Solution   |
|-----------------------|--|--|--|
| Operation             | In the setting mode, setting change is not possible.   | When <b>SET</b> blinks at the bottom left of the screen, it is in the setting confirmation mode. Therefore, setting change is not possible.  | Enter the setting mode to change settings.   |
|                       | When the screen enters the setting mode, the PASS 0000 display appears                       | The password protection is enabled.  | Enter the password you set up. The factory default password is '0000.'<br>For details, refer to <b>5.2.18 Password Protection Setting</b> .  |
| Others                | Maximum and minimum values change.   | The values will be cleared if you change a setting such as phase wire system, VT/Direct voltage, or CT primary current.  | It is necessary to record the data before changing the setting.  |
|                       | The settings you have not altered are changed.   | If you change a setting such as phase wire system, VT/Direct voltage, or CT primary current, some items will be reset to the default settings.   | Change the reset settings to your settings.<br>For details, refer to <b>3.16 Initialization of Related Items by Changing a Setting</b> .   |
|                       | When maximum and minimum values or active energy are cleared, the PASS 0000 display appears. | The password protection is enabled.  | Enter the password you set up. The factory default password is '0000.'<br>For details, refer to <b>5.2.18 Password Protection Setting</b> .  |
| Communication/Logging | <b>COM</b> on the LCD blinks. (ON for 0.25 second/OFF for 0.25 second)                       | Communication errors may be occurring in MODBUS RTU such as register address error or communication rate setting error.  | Check the register address and communication settings.<br>If a correct MODBUS RTU communication message is received, <b>COM</b> will light up.   |
|                       | <b>COM</b> on the LCD blinks. (ON for 1 second/OFF for 1 second)                             | <When ME-0000MT-SS96 is used><br>Communication errors may be occurring in MODBUS TCP such as header data error or register address error.  | Check the header data error and register address. If a correct MODBUS RTU communication message is received, <b>COM</b> will light up.   |
|                       |  | <When ME-0000BU-SS96 or ME-0000BU25-SS96 is used><br>Communication errors may be occurring in ME-0000BU-SS96 or ME-0000BU25-SS96 such as setting error, SD memory card error, or battery voltage drop. | Check the LEDs of ME-0000BU-SS96 or ME-0000BU25-SS96.<br><br>1) LOG LED fast blinking<br>When the logging item pattern is set to LP00, an error may be occurring in the setting data file, which must be stored in a SD memory card. Check the setting data file.<br>2) SDC LED fast blinking<br>Check if the SD memory card is not write protected or if there is available capacity in the SD card.<br>3) BAT LED lighting<br>The voltage of the built-in lithium battery is dropped. The customer cannot replace the battery by himself/herself. Accordingly, please consider the renewal. |

## 6. Others

### 6.5. Troubleshooting

|                       | Situation  | Possible cause               | Solution   |
|-----------------------|--|------------------------------|--|
| Communication/Logging | Although <b>LOG</b> on the LCD lights up, the clock status goes off. | The present time is not set. | Set the present time, and the clock status will light up. After this instrument restarts by applying the auxiliary power or by shifting from the test mode to the operating mode, the present time setting is necessary. For details, refer to <b>3.14 Setting Menu CL: Preset Time Settings</b> . |

## 7. Installation

### 7.1. Dimensions

#### ■ ME96SSRB-MB

#### ■ Optional plug-in module ME-4210-SS96B ME-0040C-SS96 ME-0052-SS96

## 7. Installation

### 7.1. Dimensions

■ Optional plug-in module  
ME-0000MT-SS96

[mm]

■ Optional plug-in module  
ME-0000BU-SS96  
ME-0000BU25-SS96

[mm]

## 7. Installation

### 7.2. How to Install

#### 7.2.1. Mounting Hole Dimensions

The right figure shows the hole drilling dimensions of the panel. Use a panel with a thickness of 1.6 mm to 4.0 mm for installation.

#### 7.2.2. Mounting Position

The contrast of LCD display changes depending on the angle of view. Install the instrument in a location where you can easily see it.

#### 7.2.3. Mounting and Fixing

You will install the instrument on a panel according to the following procedure.

- ① Install the two attachment lugs on the top and bottom of the unit.
- ② Tighten the screws of the attachment lugs to fix them to the panel.

The mounting screw type: M3

**Note**  
To prevent damage to the panel and screws, do not overtighten the screws. Tighten the two screws evenly. The recommended torque for this product is 0.3 N•m to 0.5 N•m (about half the normal torque).

#### 7.2.4. Optional Plug-in Module Installation

You will install the optional plug-in module to the instrument according to the following procedure.

- ① Remove the option cover.
- ② Install the optional plug-in module to the unit.

The tongue of the optional plug-in module is fitted into the groove of the unit.

|             |  |
|-------------|--|
| <b>Note</b> | <b>Protection sheet</b>  |
|             | The protection sheet is attached to the LCD display to prevent scratches on the display during installation. Before starting operation, remove the sheet. When you remove the sheet, the LCD display may light up due to static electricity generation. However, this is not abnormal. After a while, the lighting goes off due to self-discharge. |
|             | <b>Mounting position</b>   |
|             | When you install the instrument on the edge of the panel, check the work space for wiring to determine the mounting position.  |
|             | <b>Optional plug-in module</b>   |
|             | Before installing the optional plug-in module, turn off the power supply of auxiliary power. If you install it under power distribution, the instrument will not recognize it. In this case, you should get auxiliary power distribution/recovery or restart the instrument and then the instrument will recognize the optional plug-in module.    |

## 7. Installation

### 7.3. How to Connect Wiring

#### 7.3.1. Specifications on the Applicable Electrical Wire

| Parts  | Screw type | Wire for use   | Tightening torque |
|--|------------|--|-------------------|
| The terminals of this instrument:<br><ul style="list-style-type: none"> <li>• Auxiliary power</li> <li>• Voltage input</li> <li>• Current input</li> <li>• MODBUS RTU communication</li> </ul> | M3         | <ul style="list-style-type: none"> <li>• Used with crimp-type terminals: AWG 26 to 14</li> <li>• *Two-wire connection is possible.</li> </ul> Applicable crimp-type terminals: For M3 screw with an outer diameter of 6.0 mm or less.<br>   | 0.8 N·m           |
| The terminals of optional plug-in module:<br><ul style="list-style-type: none"> <li>• ME-0052-SS96</li> <li>• ME-0040C-SS96</li> <li>• ME-4210-SS96B</li> </ul>                                | Screwless  | <ul style="list-style-type: none"> <li>• Solid wire, stranded wire: AWG 24 to 14</li> <li>• *Stranded wires can be used with rod terminals.</li> </ul> Wire stripping length: 10 mm to 11 mm<br>*1: To support the UL standard, use it in accordance with the following conditions. <ul style="list-style-type: none"> <li>• Solid wire, stranded wire: AWG 24 to 18</li> <li>• Rod terminals cannot be used.</li> </ul> *2: For the use of a two-wire rod terminal, select it by referring that the insertion depth of the terminal block is 12 mm to 13 mm.<br> | -                 |

#### 7.3.2. Wiring of this Instrument

Be sure to securely tighten the terminal screws to the terminal block.

|   |  |
|---|--|
|  | <ul style="list-style-type: none"> <li>• Do not connect three or more electric wires to one terminal. Otherwise, imperfect contact can cause heat generation or a fire.</li> <li>• If you use a bare crimp-type terminal, you should secure a necessary insulation distance using an insulation tube not to expose the charging part for prevention of electric shock and short circuits.</li> </ul> |
|---|--|

#### 7.3.3. Wiring of the Optional Plug-in Module

- ① Peel the wire tip or pressure-weld a rod terminal.
- ② Insert the wire with the lever pressed and then release the lever to connect.

#### 7.3.4. Check the Connection

After wiring, check the following points:

- The electric wires are securely connected.
- There is no wrong wiring.

## 7. Installation

### 7.3. How to Connect Wiring

#### ⚠ CAUTION

Do not work under live wires.

Do not connect the terminals or RJ 45 connectors under live line conditions. In addition, do not insert or remove a SD memory card under hot line conditions. Otherwise, there is danger of electric shock, burn injury, burnout of the instrument, or a fire.

We recommend that protection fuses be installed for VT and auxiliary power unit.

Do not open the secondary side of the CT circuit.

Connect the CT secondary-side signal correctly to the terminal for CT. If the CT were incorrectly connected or if the CT secondary side were open, it could result in a high voltage generation at the CT secondary side and insulation breakdown in the CT secondary winding. It might cause burnout.

Do not short the secondary side of the VT circuit.

Connect the VT secondary-side signal correctly to the terminal for VT. If the VT were incorrectly connected or if a short occurred at the VT secondary side, an overcurrent would flow through the VT secondary side and it would cause burnout in the VT secondary winding. The burnout could spread to insulation breakdown in the primary winding. Finally, it might cause short circuit between phases.

Securely connect to the connection terminal.

Connect electrical wires properly to the connection terminal. Otherwise, heat generation or measurement errors may occur.

Do not forget the connecting wires of C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub>.

When a common wire is used for L side (load side) of CT circuit of three-phase instrument, it is necessary to short-circuit the C<sub>1</sub>, C<sub>2</sub>, and C<sub>3</sub> terminals of this instrument.

Do not use improper electrical wires.

Be sure to use an appropriate size wire compatible with the rated current and voltage. The use of an inappropriate size wire may cause a fire.

Do not pull connecting wires with a strong force.

If you pulled the terminal wires with a strong force, the input/output terminal part might come off. (Tensile load: 39.2N or less)

Do not apply an abnormal voltage.

If a high-pressure device is subjected to the pressure test, ground the input lines of CT and VT secondary sides in order to prevent damage to this instrument. If a high voltage of 2000 V AC were applied to the instrument for over one minute, it might cause a failure.

Do not connect to Non-Connection (NC) terminal.

Do not connect to the Non-Connection (NC) terminal for the purpose of relay.

Supply voltage properly to the auxiliary power source.

Supply proper voltage to the auxiliary power terminal.

If an improper voltage were applied, it might cause a failure of the instrument or a fire.

## 7. Installation

### 7.4. Wiring Diagram

#### ■ Rated voltage by phase wire system

| Phase wire system     | Type  | Rated voltage                      | Figure   |
|-----------------------|-------|------------------------------------|----------|
| 3-phase 4-wire        | STAR  | max 277 V AC (L-N) /480 V AC (L-L) | Figure 1 |
| 3-phase 3-wire        | DELTA | max 220 V AC (L-L)                 | Figure 2 |
|                       | STAR  | max 440 V AC (L-L)                 | Figure 3 |
| 1-phase 3-wire        | —     | max 220 V AC (L-N) /440 V AC (L-L) | Figure 4 |
| 1-phase 2-wire *Note1 | DELTA | max 220 V AC (L-L)                 | Figure 5 |
|                       | STAR  | max 440 V AC (L-L)                 | Figure 6 |

Note1: For the DELTA connection circuit of 3-phase 3 wire system and transformer circuit of 1-phase 2-wire system, the maximum rating is 220 V AC.  
 For the STAR connection circuit of 3-phase 4-wire/3-phase 3-wire system and 1-phase 3-wire circuit, the maximum rating is 440 V AC.

## 7. Installation

### 7.4. Wiring Diagram

#### ■ 3-phase 4-wire system, Direct input

① Auxiliary power supply

100 V AC to 240 V AC or 100 V DC to 240 V DC

② Fuse (recommendation)

Rated current: 0.5 A, Rated breaking capacity: 250 V AC 1,500 A / 250 V DC 1,500 A (a UL certified product)

③ If MODBUS RTU devices do not have the SG terminal, the wiring between SG terminals is not necessary.

④ Install 120-Ohm terminating resistors between terminals 'T/R+' and 'T/R-' for devices at both ends of MODBUS RTU communication line.

Note1: For low voltage circuits, it is not necessary to ground the VT and CT secondary sides.

#### ■ 3-phase 4-wire system, With VT

① Auxiliary power supply

100 V AC to 240 V AC or 100 V DC to 240 V DC

② Fuse (recommendation)

Rated current: 0.5 A, Rated breaking capacity: 250 V AC 1,500 A / 250 V DC 1,500 A (a UL certified product)

③ If MODBUS RTU devices do not have the SG terminal, the wiring between SG terminals is not necessary.

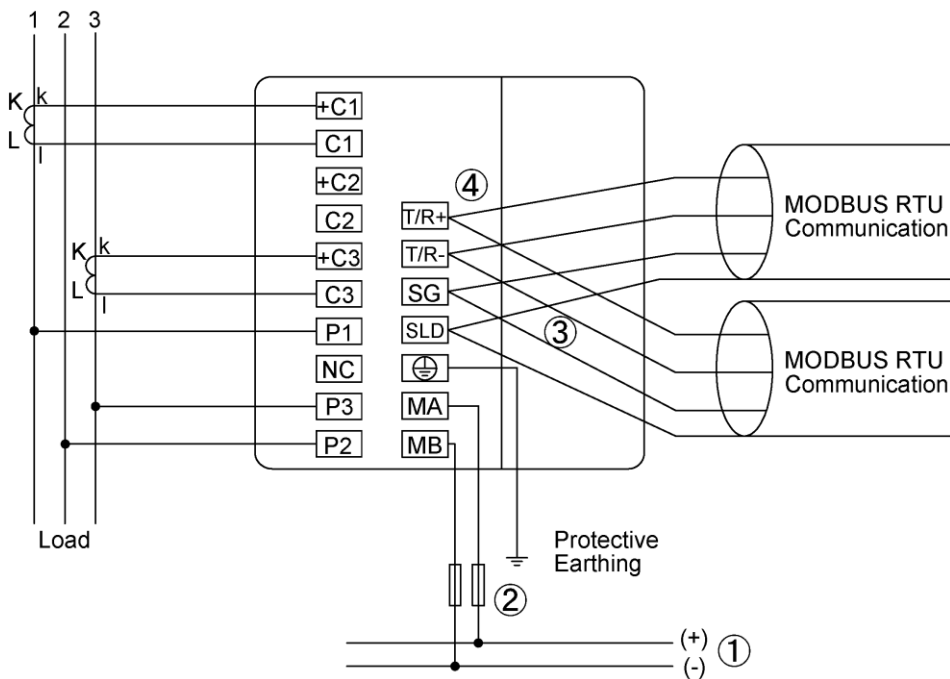

④ Install 120-Ohm terminating resistors between terminals 'T/R+' and 'T/R-' for devices at both ends of MODBUS RTU communication line.

Note1: For low voltage circuits, it is not necessary to ground the VT and CT secondary sides.

## 7. Installation

### 7.4. Wiring Diagram

#### ■ 3-phase 3-wire system, Direct input, 2CT

① Auxiliary power supply

100 V AC to 240 V AC or 100 V DC to 240 V DC

② Fuse (recommendation)

Rated current: 0.5 A, Rated breaking capacity: 250 V AC 1,500 A / 250 V DC 1,500 A (a UL certified product)

③ If MODBUS RTU devices do not have the SG terminal, the wiring between SG terminals is not necessary.

④ Install 120-Ohm terminating resistors between terminals 'T/R+' and 'T/R-' for devices at both ends of MODBUS RTU communication line.

Note1: For low voltage circuits, it is not necessary to ground the VT and CT secondary sides.

Note2: Do not connect the NC terminal.

#### ■ 3-phase 3-wire system, With VT, 3CT

① Auxiliary power supply

100 V AC to 240 V AC or 100 V DC to 240 V DC

② Fuse (recommendation)

Rated current: 0.5 A, Rated breaking capacity: 250 V AC 1,500 A / 250 V DC 1,500 A (a UL certified product)

③ If MODBUS RTU devices do not have the SG terminal, the wiring between SG terminals is not necessary.

④ Install 120-Ohm terminating resistors between terminals 'T/R+' and 'T/R-' for devices at both ends of MODBUS RTU communication line.

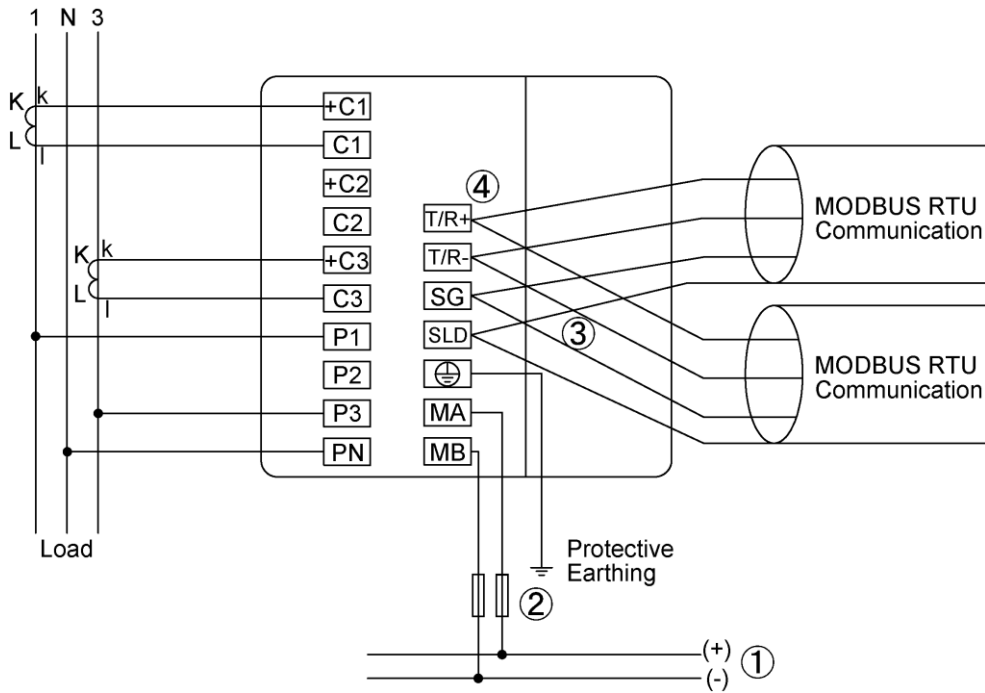

Note1: For low voltage circuits, it is not necessary to ground the VT and CT secondary sides.

Note2: Do not connect the NC terminal.

## 7. Installation

### 7.4. Wiring Diagram

#### ■ 1-phase 3-wire system

①Auxiliary power supply

100 V AC to 240 V AC or 100 V DC to 240 V DC

②Fuse (recommendation)

Rated current: 0.5 A, Rated breaking capacity: 250 V AC 1,500 A / 250 V DC 1,500 A (a UL certified product)

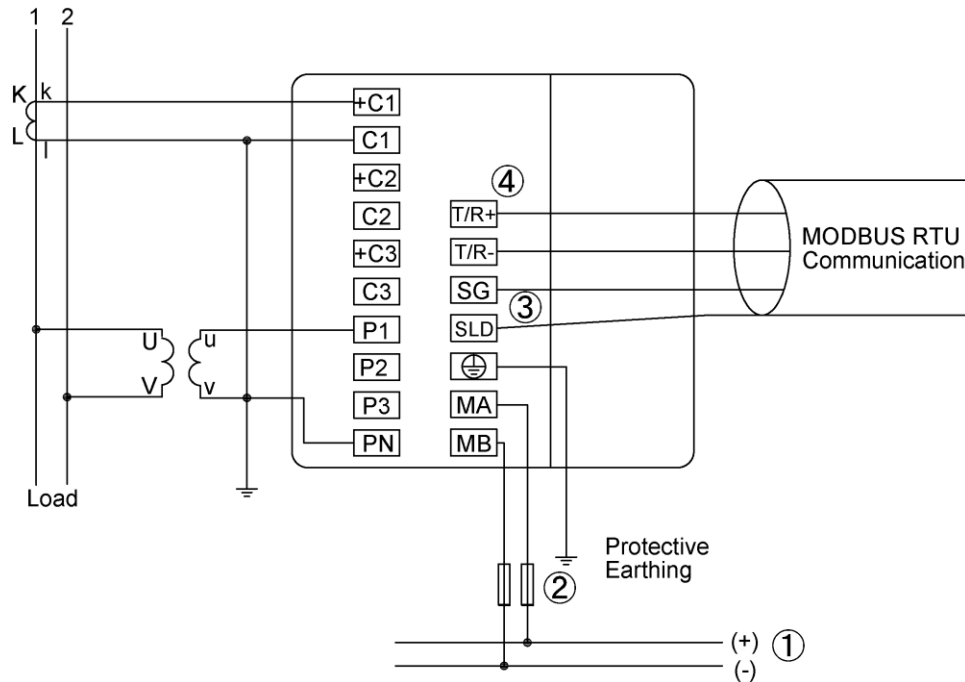

③If MODBUS RTU devices do not have the SG terminal, the wiring between SG terminals is not necessary.

④Install 120-Ohm terminating resistors between terminals 'T/R+' and 'T/R-' for devices at both ends of MODBUS RTU communication line.

Note1: For low voltage circuits, it is not necessary to ground the VT and CT secondary sides.

Note2: Do not connect the NC terminal.

#### ■ 1-phase 2-wire system, With VT

①Auxiliary power supply

100 V AC to 240 V AC or 100 V DC to 240 V DC

②Fuse (recommendation)

Rated current: 0.5 A, Rated breaking capacity: 250 V AC 1,500 A / 250 V DC 1,500 A (a UL certified product)

③If MODBUS RTU devices do not have the SG terminal, the wiring between SG terminals is not necessary.

④Install 120-Ohm terminating resistors between terminals 'T/R+' and 'T/R-' for devices at both ends of MODBUS RTU communication line.

Note1: For low voltage circuits, it is not necessary to ground the VT and CT secondary sides.

Note2: Do not connect the NC terminal.

#### For Input

|             |  |
|-------------|--|
| <b>Note</b> | <ol style="list-style-type: none"><li>1. The voltage input terminals of 3-phase 3-wire system are different from those of other systems.</li><li>2. If the VT and CT polarities are incorrect, measurement will not be correctly executed.</li><li>3. Do not wire the NC terminal.</li><li>4. For low voltage, it is not necessary to ground the VT and CT secondary sides.</li><li>5. Be sure to ground the earth terminal (⊕) to use. The ground resistance is 100 ohm or less. Improper ground may cause a malfunction.</li></ol> |
|-------------|--|

#### For Output

| <b>Note</b>                  | <ol style="list-style-type: none"><li>1. Pulse output lines, alarm output lines, and digital input/output lines must not be placed close to or bound together with power lines or high voltage lines. When lying parallel to the power lines or high voltage lines, refer to the following table for the separation distance.<table border="1" data-bbox="427 698 1026 801"><thead><tr><th>Conditions</th><th>Distance</th></tr></thead><tbody><tr><td>Power lines of 600 V or less</td><td>300 mm or more</td></tr><tr><td>Other power lines</td><td>600 mm or more</td></tr></tbody></table></li><li>2. Analog output lines must not be placed close to or bound together with other power lines or input lines (for VT, CT, and auxiliary power supply). Use a shielded cable or twisted pair cable not to be affected by noise, surge, or induction. The connecting wires should be as short as possible.</li><li>3. The MODBUS RTU communication section and ME-4210-SS96B (optional plug-in module) are not insulated.</li></ol> | Conditions | Distance | Power lines of 600 V or less | 300 mm or more | Other power lines | 600 mm or more |
|------------------------------|--|------------|----------|------------------------------|----------------|-------------------|----------------|
| Conditions                   | Distance   |            |          |                              |                |                   |                |
| Power lines of 600 V or less | 300 mm or more   |            |          |                              |                |                   |                |
| Other power lines            | 600 mm or more   |            |          |                              |                |                   |                |

#### For MODBUS RTU Communication

|             |   |
|-------------|---|
| <b>Note</b> | <ol style="list-style-type: none"><li>1. Use a shielded twisted pair cable for transmission signal line.<br/>*For recommended cables, refer to <b>8.3 MODBUS RTU Communication Specifications</b>.</li><li>2. Install 120-Ohm terminating resistors between terminals 'T/R+' and 'T/R-' for devices at both ends of MODBUS RTU communication line.</li><li>3. Connect with wires as thick as possible to ground for low impedance.</li><li>4. The transmission signal lines of MODBUS RTU communication must not be placed close to or bound together with high voltage lines.</li><li>5. Perform one point grounding for the SLD terminal.</li></ol> |
|-------------|---|

#### For CC-Link Communication

|             |   |
|-------------|---|
| <b>Note</b> | <ol style="list-style-type: none"><li>1. Use a specified cable for CC-Link connection. For details, refer to <b>8.4 CC-Link Communication Specifications</b>.<br/>It is not possible to mix dedicated cables and CC-Link dedicated high-performance cables. If they were mixed, correct data transmission would not be ensured. For termination resistor, the resistance value varies depending on the dedicated cable type.</li><li>2. Connect the shielded wire of CC-Link connection cable to 'SLD' and ground 'FG' (The ground resistance: 100 Ω or less.). 'SLD' and 'FG' are connected inside the unit.</li><li>3. The CC-Link transmission line is with a small signal circuit. Install it separately from a strong electric circuit by 100 mm or more. When long wires lie parallel to each other, keep a distance of 300 mm or more. For use, ground the terminals.</li><li>4. Be sure to use a dedicated cable for CC-Link transmission line. According to the communication speed, observe the conditions for total wiring distance, inter-station distance, and termination resistance value. If the dedicated cable were not used or if the wiring conditions were not fulfilled, correct communication might not be executed. For the dedicated cable and the wiring conditions, refer to the user's manual of CC-Link master unit.</li><li>5. For units at both ends of CC-Link transmission line, be sure to install the termination resistors that come with the CC-Link master unit.</li><li>6. The CC-Link communication section and MODBUS RTU communication section are not insulated.</li></ol> |
|-------------|---|

## 7. Installation

### 7.4. Wiring Diagram

For MODBUS TCP Communication

|             |  |
|-------------|--|
| <b>Note</b> | <p>1. For 100 Mbps communication with 100 BASE-TX connection, a communication error may occur depending on the installation environment due to the effect of high frequency noise from devices other than this instrument. To prevent the effect of high frequency noise, take the following measures against it when configuring a network system.</p> <p>(1) Wiring connection</p> <ul style="list-style-type: none"><li>• Twisted pair cables must not be placed close to or bound together with the main circuit or power lines.</li><li>• Put the twisted pair cable in a duct.</li></ul> <p>(2) Communication method</p> <ul style="list-style-type: none"><li>• Increase the communication retry count as necessary.</li><li>• Replace with a 10 Mbps hub for connection use and communicate with a data transmission speed of 10 Mbps.</li></ul> |
|-------------|--|

## 7. Installation

### 7.5. How to insert/remove SD memory card

■ When inserting the SD memory card:

Insert the SD memory card straight into the SD memory slot until you hear a click.

**CAUTION**

- Be sure to use a SD memory card, EMU4-SD2GB, produced by Mitsubishi Electric Corporation. Using a SD memory card not produced by Mitsubishi Electric Corporation may cause a trouble such as data corruption in the card or system stop.
- Insert the SD memory card with the write protect switch OFF. If the write protect switch is ON, the logging unit will not communicate with the card.

■ When removing the SD memory card:

- ① Check that SD C.LED is OFF.
- ② Insert the SD memory card until you hear a click.
- ③ The SD memory card comes out automatically.

**CAUTION**

If you removed the SD memory card while the instrument communicates with the card, this might cause data corruption in the card or failure of the instrument or card. After checking that SD C.LED is OFF, remove the card.

|                               | Number of display digits or segments   | Digital section  | First to third line indication: 4 digits, Fourth line indication: 6 digits<br>A, DA, V, W, var, VA, PF, DW, Dvar, DVA, Aunb, Vunb: 4 digits; Hz: 3 digits; Wh, varh, VAh: 9 digits (6-digit or 12-digit is also available.); Harmonic distortion ratio/content rate: 4 digits; Harmonic RMS value: 4 digits; Operating time: 6 digits; CO2 equivalent: 6 digits or 9 digits; Digital input/output: I/O |
|                               | Display update time interval           | 0.5 s, 1 s (selectable)  |  |
| Communication                 |  | MODBUS RTU communication   |  |
| Built-in logging              | Logging mode                           | Automatic overwrite update   |  |
|                               | Logging data type                      | Measurement data *1  | Measuring data and time data are stored at a data logging period specified. (15 min, 30 min, 60 min)   |
|                               |  | Alarm data   | Time data at alarm generating/cancellation and at waiting for alarm cancellation   |
|                               | The recorded time of the Max/Min value | Time data of when the maximum and minimum values are updated.  |  |

## 8. Specifications

### 8.1. Product Specifications

| Item   |   | Specifications   |  |
|--|---|--|--|
| Built-in logging                               | Number of logging items                         | Measurement data   | Integrated value data: 5 items, Data other than integrated value: 15 items, Total: Max. 20 items   |
|  |   | Alarm data   | The number of the set alarms   |
|  |   | The recorded time of the Max/Min value   | The total is 19 elements: Current Max/Min (AVG), Line voltage Max/Min (AVG), Phase voltage Max/Min (AVG), Total active power Max/Min (AVG), Total power factor Max/Min (AVG), Frequency Max/Min (AVG), Total reactive power Max/Min, Total apparent power Max/Min, Total harmonic current RMS Max value, Harmonic line voltage distortion ratio Max total, Harmonic phase voltage distortion ratio Max total |
|  | Internal memory logging period                  | Measurement data   | 30 days (Logging period: 15 minutes), 60 days (Logging period: 30 minutes), 120 days (Logging period: 60 minutes),   |
|  |   | Alarm data   | 100 records  |
|  |   | The recorded time of the Max/Min value   | 1 record for each Max/Min value  |
|  | System log data                                 |  | 100 records  |
|  | How to acquire logging data and system log data |  | Acquire the logging data via MODBUS RTU Communication  |
|  | Clock setting                                   |  | By button operation on the screen, By MODBUS RTU communication, By acquiring the data from the logging unit  |
|  | Clock accuracy                                  |  | ± 1 minute per month, typical  |
|  | Power interruption backup                       | Setup value, Logging data, System log data   | The non-volatile memory is used.   |
|  |   | Clock operation  | The timing operation stops under power outage.<br>The timing operation after power recovery is as follows:<br>·When no ME-0000BU-SS96 or ME-0000BU25-SS96 is installed, the timing starts at the time before power outage.<br>·When ME-0000BU-SS96 or ME-0000BU25-SS96 is installed, the timing starts at the time of the logging module.  |
|  | Connectable optional plug-in module             |  | ME-4210-SS96B, ME-0040C-SS96, ME-0052-SS96, ME-0000MT-SS96, ME-0000BU-SS96, ME-0000BU25-SS96   |
| Analog output                                  | Output specifications (Load)                    | 4 mA to 20 mA DC (0 Ω)to 600 Ω)  |  |
| Pulse/Alarm output                             | Switch type                                     | Semiconductor relay/No-voltage a-contact   |  |
|  | Contact capacity                                | 35 V DC, 0.1 A   |  |
|  | Pulse width                                     | 0.125 s, 0.5 s, 1.0 s  |  |
| Digital input (DI)                             | Contact capacity                                | 24 V DC (19 V DC to 30 V DC), 7 mA or less   |  |
|  | Signal width                                    | 30 ms or more  |  |
| Digital output (DO)                            | Switch type                                     | Mechanical relay/No-voltage a-contact  |  |
|  | Contact capacity                                | 35 V DC, 0.2 A   |  |
| Power interruption backup                      |   | Non-volatile memory is used. (Item: Setup value, Max/Min value, Active energy, Reactive energy, Apparent energy, Periodic active energy, Rolling demand, Operating time) |  |
| VA Consumption                                 | Voltage circuit                                 | 0.1 VA/phase (at 110 V AC), 0.2 VA/phase (at 220 V AC), 0.4 VA/phase (at 440 V AC)   |  |
|  | Current circuit                                 | 0.1 VA / phase   |  |
|  | Auxiliary power circuit                         | 13 VA (at 110 V AC), 14 VA (at 220 V AC), 9 W (at 100 V DC)  |  |
| Auxiliary power                                |   | 100 to 240 V AC (±15%), 100 to 240 V DC (-30% +15%)  |  |
| Weight   |   | 0.5 kg   |  |
| Dimensions W × H × D [protrusion from cabinet] |   | 96 × 96 × 90 mm (depth of meter from housing mounting flange) [13 mm]  |  |
| Mounting method                                |   | Embedded type  |  |
| Operating temperature/humidity                 |   | -5°C to +55°C (Daily average temperature: 35°C or less), 0 to 85% RH, Non condensing   |  |
| Storage temperature/ humidity                  |   | -25°C to +75°C (Daily average temperature: 35°C or less), 0 to 85% RH, Non condensing  |  |

## 8. Specifications

### 8.1. Product Specifications

Note1: The accuracy class value represents the ratio to the rated value (100%).

Note2: For measurement where the harmonic distortion ratio (content rate) is 100% or more, the class can exceed  $\pm 1.0\%$ .

Note3: Harmonic current cannot be measured without voltage input.

Note4: If the conventional ME-4210-SS96 (Optional plug-in module) is used, the safety certification requirements of CE marking and UL standards cannot be met.

\*1. Integrated values (Wh, varh, and VAh) are measured values in ME96SS. They are not differential values by logging period.

PMD characteristics (specified by IEC61557-12)

| Type of characteristic  | Characteristic value | Other complementary characteristic |
|---|----------------------|------------------------------------|
| Power quality assessment function according to 4.3                                  | PMD- II              | -                                  |
| Classification of PMD according to 4.4  | SD                   | -                                  |
| Temperature   | K55                  | -                                  |
| Humidity + altitude   | Standard conditions  | -                                  |
| Active power or active energy function<br>(If function available) performance class | 0.5                  | -                                  |

### 8.3. MODBUS RTU Communication Specifications

| Item                     | Specifications  |
|--------------------------|---|
| Physical interface       | RS-485 2wires half duplex   |
| Protocol                 | RTU mode  |
| Synchronization method   | Start-stop synchronization  |
| Transmission wiring type | Multi-point bus (either directly on the trunk cable, forming a daisy-chain)         |
| Baud rate                | 2400 bps, 4800 bps, 9600 bps, 19200 bps, 38400 bps<br>(Default is 19200 bps)        |
| Data bit                 | 8   |
| Stop bit                 | 1 or 2 (Default is 1)   |
| Parity                   | ODD,EVEN or NONE (Default is EVEN)  |
| Slave address            | 1 to 255 (FFh) (Default is 1, 0 is for broadcast mode)<br>(248 to 255 are reserved) |
| Distance                 | 1200 m  |
| Max. number              | 31  |
| Response time            | 1 s or less (time to response after query data is received)                         |
| Terminate                | 120 $\Omega$ 1/2 W  |
| Recommended cable        | Shielded twisted pair cable, AWG 24 to 14   |

## 8. Specifications

### 8.4. CC-Link Communication Specifications for optional plug-in module

| Item  | Specifications  |           |
|---|---|-----------|
| CC-Link version                               | Ver. 1.10   | Ver. 2.00 |
| Number of occupied stations                   | 1 station, remote device station  |           |
| Expanded cyclic setting                       | -   | Octuple   |
| Remote station number                         | 1 to 64   |           |
| Transmission speed                            | 156 k, 625 k, 2.5 M, 5 M, 10 Mbps   |           |
| Maximum number of stations per master station | 42 stations (In case of connecting only remote device station occupied by 1 station)<br>For details, refer to the specifications of the master station. |           |
| Connection cable                              | Use a dedicated cable.<br>The termination resistance value varies depending on the dedicated cable type.  |           |

The maximum transmission distance varies depending on the transmission speed and CC-Link version.

For details, refer to the following website:

CC-Link Partner Association: <http://www.cc-link.org/>

For the programming, refer to the following documents:

- Electronic Multi-Measuring Instrument Programming Manual (CC-Link) For ver.1 remote device station (Ref. No. LEN080334)
- Electronic Multi-Measuring Instrument Programming Manual (CC-Link) For ver.2 remote device station (Ref. No. LEN130391)

### 8.5. MODBUS TCP Communication Specifications for optional plug-in module

| Item                                     | Specifications   |  |
|--|--|--|
| Interface                                | 1 port (10BASE-T/100BASE-TX)   |  |
| Transmission method                      | Base band  |  |
| Number of cascade connection stages *1   | Max. 4 stages (10BASE-T)<br>Max. 2 stages (100BASE-TX)   |  |
| Maximum node-to-node distance            | 200 m  |  |
| Maximum segment length *2                | 100 m  |  |
| Connector applicable for external wiring | RJ45   |  |
| Cable                                    | 10BASE-T   | Cable compliant with the IEEE802.3 10BASE-T Standard<br>*Unshielded twisted pair cable (UTP cable), Category 3 or more |
|  | 100BASE-TX   | Cable compliant with the IEEE802.3 100BASE-TX Standard<br>*Shielded twisted pair cable (STP cable), Category 5 or more |
| Protocol                                 | MODBUS TCP (Port number 502)   |  |
| Number of simultaneously connection      | Max. 4   |  |
| Supported function                       | Autonegotiation (10BASE-T/100BASE-TX automatically detected)<br>Auto MDIX function (straight/crossover cable automatically detected) |  |

\*1. It is for the use of repeater hubs. When using switching hubs, check the specifications of the hub you use.

\*2. It is a distance between a hub and a node.

## 8. Specifications

### 8.6. Logging Specifications for optional plug-in module

| Item   |               | Specifications  |   |
|--|---------------|---|---|
| Model  |               | ME-0000BU-SS96  | ME-0000BU25-SS96  |
| Logging mode   |               | Automatic overwrite update  |   |
| Logging data type *1   | Detailed data | Measuring data is stored at a detailed data logging period specified.<br>(1 min, 5 min, 10 min, 15 min, 30 min)<br>*Output as detailed data file  |   |
|  | 1-hour data   | Measuring data is stored in a 1-hour period.<br>*Output as 1-hour data file and 1-day data file   |   |
| Number of logging items  | Detailed data | Max. 6 items  | Max. 25 items   |
|  | 1-hour data   | Max. 6 items  |   |
| Internal memory logging period   | Detailed data | Logging period:1 minute      2 days<br>Logging period:5 minutes      10 days<br>Logging period:10 minutes      20 days<br>Logging period:15 minutes      30 days<br>Logging period:30 minutes      60 days  | Logging period:1 minute      1 days<br>Logging period:5 minutes      5 days<br>Logging period:10 minutes      10 days<br>Logging period:15 minutes      15 days<br>Logging period:30 minutes      30 days |
|  | 1-hour data   | 400 days (about 13 months)  | 250 days (about 8 months)   |
| SD memory card (2GB) Logging period *2                                 |               | 10 years or more  |   |
| System log data  |               | 1200 records  |   |
| Logging data/System log data output format                             |               | CSV format (ASCII code)   |   |
| Power interruption backup  |               | Backup with the built-in lithium battery<br>Cumulative power interruption backup time: 5 years (Daily average temperature: 35°C or less)<br>*The lithium battery service life time: 10 years (Daily average temperature: 35°C or less)<br>It is not possible to replace the lithium battery, and you should consider the renewal. |   |
| Setup values (Logging ID, Logging items, Detailed data logging period) |               | Stored in the non-volatile memory<br>*Even if power failure occurs in battery voltage drop (BAT.LED is ON), data is not deleted.  |   |
| Logging data System log data   |               | Stored in the volatile memory<br>*When power failure occurs in battery voltage drop (BAT.LED is ON), data is deleted.   |   |
| Clock operation  |               | *When power failure occurs in battery voltage drop (BAT.LED is ON), timing operation stops.<br>After power recovery, the timing starts at 00:00 Jan. 1, 2016.   |   |
| Clock accuracy   |               | ± 1 minute per month, typical   |   |
| Destination storage medium *3  |               | SD memory card (SD, SDHC)   |   |
| Optional supplies  |               | SD memory card (EMU4-SD2GB) *3*4  |   |

\*1. Integrated values (Wh, varh, and VAh) are measured values in ME96SS. They are not differential values calculated by logging period.

\*2. It represents a period until a 2 GB SD memory card capacity is exceeded under the constant connection.

\*3. Be sure to use a SD memory card, EMU4-SD2GB, produced by Mitsubishi Electric Corporation. Using other SD memory cards not produced by Mitsubishi Electric Corporation may cause a trouble such as data corruption in the card or system stop. Regarding the use of commercially available SD memory cards, access our FA website. Note that the customer is responsible for verifying safe use of those SD memory cards.

\*4. If you need some optional supplies, please consult with your supplier.

## 9. Appendix

### 9.1. ME96SS Calculation Method (3-Phase Unbalanced System with Neutral)

The following table shows general calculation definitions of electric energy measurement this instrument employs.

| Item                               | Normal mode  | IEC (A) mode                  | IEC (V) mode                  | Notes                                 |
|------------------------------------|--|-------------------------------|-------------------------------|---------------------------------------|
| RMS current in phase $p$           | $I_p = \sqrt{\frac{\sum_{k=0}^{M-1} i_{pk}^2}{M}}$                                   |                               |                               |                                       |
| Calculated RMS neutral current     | $I_N = \sqrt{\frac{\sum_{k=0}^{M-1} (i_{1k} + i_{2k} + i_{3k})^2}{M}}$               |                               |                               |                                       |
| Phase $p$ to neutral RMS voltage   | $V_p = \sqrt{\frac{\sum_{k=0}^{M-1} v_{pk}^2}{M}}$                                   |                               |                               |                                       |
| Phase $p$ to phase $g$ RMS voltage | $U_{pg} = \sqrt{\frac{\sum_{k=0}^{M-1} (v_{pk}^2 - v_{gk}^2)^2}{M}}$                 |                               |                               |                                       |
| Active power for phase $p$         | $P_p = \frac{1}{M} \cdot \sum_{k=0}^{M-1} (v_{pk} \times i_{pk})$                    |                               |                               |                                       |
| Apparent power for phase $p$       | $S_p = V_p \times I_p$   |                               |                               |                                       |
| Reactive power for phase $p$       | $Q_p = Q_{pquad} = \frac{1}{M} \cdot \sum_{k=0}^{M-1} (v_{p_{k-N/4}} \times i_{pk})$ | $Q_p = \sqrt{S_p^2 - P_p^2}$  |                               | For the sign, refer to <b>5.1.12.</b> |
| Power factor for phase $p$         | $PF_p = \frac{P_p}{\sqrt{P_p^2 + Q_p^2}}$  | $PF_p = \frac{P_p}{S_p}$      |                               | For the sign, refer to <b>5.1.12.</b> |
| Total active power                 | $P = \sum_{p=1}^{N_{ph}} P_p$  |                               |                               |                                       |
| Total reactive power               | $Q = \sum_{p=1}^{N_{ph}} Q_p$  | $Q = \sqrt{S^2 - P^2}$        | $Q = \sum_{p=1}^{N_{ph}} Q_p$ | For the sign, refer to <b>5.1.12.</b> |
| Total apparent power               | $S = \sum_{p=1}^{N_{ph}} S_p$  | $S = \sum_{p=1}^{N_{ph}} S_p$ | $S = \sqrt{P^2 + Q^2}$        |                                       |
| Total power factor                 | $PF = \frac{P}{\sqrt{P^2 + Q^2}}$  | $PF = \frac{P}{S}$            |                               | For the sign, refer to <b>5.1.12.</b> |

## 9. Appendix

### 9.2. Optional parts

#### ■ SD memory card

| Item            | Specifications |
|-----------------|----------------|
| Model           | EMU4-SD2GB     |
| Memory capacity | 2 GB           |
| Weight          | 2 g            |

Note: The unit of number is 'mm.'

## 9. Appendix

### 9.3. A List of Examples for Incorrect Wiring Display

#### 9.3.1. 3-phase 4-wire System

\*The shaded parts indicate influential parts caused by incorrect wiring.  
The dashed lines show incorrect wiring parts.

| No. | Power Factor (Input) | Phase Angle Display |                 |                 |              |              |              | At balanced load ( $V_{1N}=V_{2N}=V_{3N}$ , $I_1=I_2=I_3$ ) |                        |               |                 |          |          |                 |               |               | Connection (Note 1) |                           |                        |               |           |           |            |           |               |               |               |   |                        |               |    |               |               |               |                                 |               |               |   |                        |               |    |    |    |    |               |                |               |                                 |     |     |                                 |     |     |   |                        |               |    |    |    |    |               |                |               |                                 |  |  |  |  |

Note1: The above examples for incorrect wiring are typical. Extreme cases are excluded such as burnout or destruction of the instrument, VT, or CT caused by voltage application to a current circuit or current application to a voltage circuit.

Note : The active power polarity may be displayed in reverse depending on the load status (low power factor, unbalanced load) even when the connection is correct.

## 9. Appendix

### 9.3. A List of Examples for Incorrect Wiring Display

#### 9.3.2. 3-phase 3-wire System

\*The shaded parts indicate influential parts caused by incorrect wiring.  
The dashed lines show incorrect wiring parts.

|     | LAG 0.707            |   |                 | 195          | 255          |  |                        |                 |          |          |                 |                     |                |   |         |   |            |

Note1: When the terminals 'C1' and '+C1' of CT are connected to the terminals '+C1' and 'C1' of the instrument in that order.

Note2: When the terminals 'C3' and '+C3' of CT are connected to the terminals '+C3' and 'C3' of the instrument in that order.

Note3: When 1 side CT and 3 side CT switch to each other, and in addition, the terminals 'C3' and '+C3' of CT are connected to the terminals '+C1' and 'C1' of the instrument in that order.

Note4: When 1 side CT and 3 side CT switch to each other, and in addition, the terminals 'C1' and '+C1' of CT are connected to the terminals '+C3' and 'C3' of the instrument in that order.

Note5: When '+C1' and 'C3' of CT are connected and it is connected to the '+C1' terminal of the instrument.

Note6: When 'C1' and '+C3' of CT are connected and it is connected to the '+C3' terminal of the instrument.

Note7: The above examples for incorrect wiring are typical. Extreme cases are excluded such as burnout or destruction of the instrument, VT, or CT caused by voltage application to a current circuit or current application to a voltage circuit.

Note : The active power polarity may be displayed in reverse depending on the load status (low power factor, unbalanced load) even when the connection is correct.

Note : The above table shows incorrect wiring display examples of 3-phase 3-wire system (2CT). Those of 3-phase 3-wire system (3CT) are also the same. However, it is not possible to detect the incorrect wiring of the CT secondary side.

## 9. Appendix

### 9.3. A List of Examples for Incorrect Wiring Display

#### 9.3.3. 1-phase 3-wire System

\*The shaded parts indicate influential parts caused by incorrect wiring.  
The dashed lines show incorrect wiring parts.
